Pustule), which seemed to me to mark an epoch in the history of this formidable disease. With admirable patience, skill, and penetration Koch followed up the life-history of bacillus anthracis, the contagium of this fever. At the time here referred to he was a young physician holding a small appointment in the neighbourhood of Breslau, and it was easy to predict, and indeed I predicted at the time, that he would soon find himself in a higher position. When I next heard of him he was head of the Imperial Sanitary Institute of Berlin. . . . Koch was not the discoverer of the parasite of splenic fever. Davaine and Rayer, in 1850, had observed the little microscopic rods in the blood of animals which had died of splenic fever. But they were quite unconscious of the significance of their observation, and for thirteen years, as M. Radot informs us, strangely let the matter drop. In 1863 Davaine's attention was again directed to the subject by the researches of Pasteur, and he then pronounced the parasite to be the cause of the fever. He was opposed by some of his fellow-countrymen; long discussions followed, and a second period of thirteen years, ending with the publication of Koch's paper, elapsed before M. Pasteur took up the question. I always, indeed, assumed that from the paper of the learned German came the impulse towards a line of inquiry in which M. Pasteur has achieved such splendid results."—J. Tyndall, *New Fragments*, pp. 190-191.—"On the 24th of March, 1882, an address of very serious public import was delivered by Dr. Koch before the Physiological Society of Berlin. . . . The address . . . is entitled 'The Etiology of Tubercular Disease.' Koch first made himself known, and famous, by the penetration, skill, and thoroughness of his researches on the contagium of anthrax, or splenic fever. . . . Koch's last inquiry deals with a disease which, in point of mortality, stands at the head of them all. 'If,' he says, 'the seriousness of a malady be measured by the number of its victims, then the most dreaded pests which have hitherto ravaged the world—plague and cholera included—must stand far behind the one now under consideration.' Then follows the startling statement that one-seventh of the deaths of the human race are due to tubercular disease. Prior to Koch it had been placed beyond doubt that the disease was communicable; and the aim of the Berlin physician has been to determine the precise character of the contagium which previous experiments on inoculation and inhalation had proved to be capable of indefinite transfer and reproduction. He subjected the diseased organs of a great number of men and animals to microscopic examination, and found, in all cases, the tubercles infested by a minute, rod-shaped parasite, which by means of a special dye, he differentiated from the surrounding tissue. 'It was,' he says, 'in the highest degree impressive to observe in the centre of the tubercle-cell the minute organism which had created it.' Transferring directly, by inoculation, the tuberculous matter from diseased animals to healthy ones, he in every instance reproduced the disease. To meet the objection that it was not the parasite itself, but some virus in which it was imbedded in the diseased organ, that was the real contagium, he cultivated his bacilli artificially for long periods of time and through many successive generations.

With a speck of matter, for example, from a tuberculous human lung, he infected a substance prepared, after much trial, by himself, with the view of affording nutriment to the parasite. In this medium he permitted it to grow and multiply. From the new generation he took a minute sample, and infected therewith fresh nutritive matter, thus producing another brood. Generation after generation of bacilli were developed in this way, without the intervention of disease. At the end of the process, which sometimes embraced successive cultivations extending over half a year, the purified bacilli were introduced into the circulation of healthy animals of various kinds. In every case inoculation was followed by the reproduction and spread of the parasite, and the generation of the original disease. . . . The moral of these experiments is obvious. In no other conceivable way than that pursued by Koch could the true character of the most destructive malady by which humanity is now assailed be determined. And however noisy the fanaticism of the moment may be, the common-sense of Englishmen will not, in the long run, permit it to enact cruelty in the name of tenderness, or to debar us from the light and leading of such investigations as that which is here so imperfectly described."—J. Tyndall, *New Fragments*, pp. 423-428.

19th Century.—The Theory of Germ Diseases.—"An account of the innumerable questions and investigations in this department of modern pathogenesis, of the various views on certain questions, etc., does not fall within the compass of our brief sketch. Nor are we able to furnish a consistent theory, simply because such an one does not [1889] exist. One fact alone is agreed upon, to wit, that certain of the lower fungi, as parasites within or upon the body, excite diseases (infectious diseases). As regards the *modus operandi* of these parasites two main theories are held. According to one theory, these parasites, by their development, deprive the body of its nutriment and endanger life particularly when, thronging in the blood, they deprive this of the oxygen necessary for existence. According to the other theory, they threaten life by occasioning decompositions which engender putrid poisons (ptomaines). These latter poisons were first isolated by P. L. Panum in 1856, and have been recently specially studied by Brieger (Ueber Ptomaine, Berlin, 1885-86). They act differently upon bodies according to the variety of the alkaloidal poison. Metschnikoff regards the white blood-corpuscles as antagonists of these parasites (thus explaining the cases of recovery from parasitic diseases), and in this point of view calls them 'phagocytes.' On the other hand E. Salmon and Theodore Smith ('Transactions of the Washington Biological Society, Feb. 22d, 1886) were the first to demonstrate that sterilized nutritive solutions or germ-free products of change of matter of the virulent exciters of disease, when injected, afford protection. A. Chauveau as early as 1880 had brought forward evidence of the probability of this fact, and Hans Buchner in 1879 admitted the possibility of depriving bacteria of their virulence. Pasteur, however, believes he has demonstrated that by continued cultures (also a sort of bacillary isopathy) 'debilitated' germs act as prophylactics against the corresponding parasitic diseases, and he even thinks he has con-

firmed this by his inoculations against hydrophobia—a view, at all events, still open to doubt. . . . The chief diseases regarded as of parasitic origin at present are: anthrax (Davaine, 1850); relapsing fever (Obermeier, 1873); gonorrhœa and blenorrhœa neonatorum (Neisser, 1879); glanders (Struck, 1883, Loeffler and Schütz); syphilis (Sigm. Lustgarten, 1884); diphtheria (Oertel, Letzerich, Klebs); typhus (Eberle, Klebs); tuberculosis (Koch, 1882); cholera (Koch, 1884); lepra (Armauer-Hansen); actinomycosis (Bollinger in cattle, 1877; Israel in man, 1884); septicæmia (Klebs); erysipelas (Fehleisen); pneumonia (Friedländer); malarial fever (Klebs, Tommasi-Crudeli, Marchiafava); malignant œdema (Koch); tetanus (Carle and Rattone, Nicolaier, Roeschlaub assumed a tetania occasioned by bacilli); cancer (Scheuerlen; priority contested by Dr. G. Rappia and Prof. Domingo Freire of Rio Janeiro); yellow fever (microbe claimed to have been discovered by Freire); dysentery (bacillary diphtheritis of the large intestine); cholera nostras (Finkler and Prior); scarlet fever (Coze and Feltz, '72); variola and vaccina (Keber, Zülzer, Weigert, Klebs); acute yellow atrophy of the liver (Klebs, Waldeyer, Eppinger); endocarditis (Ziegler); hæmophilia neonatorum (Klebs, Eppinger); trachoma (Sattler); keratitis (Leber—aspergillus); ulcer rodens corneæ (Sattler); gonorrhœal rheumatism (Petroni, Kammerer). If the bacterial theory of infection, constantly threatening life by such numerous pathogenic varieties of infecting organisms, must be looked upon as a gloomy one, the anti-bacterial Phagocyte Theory of Metschnikoff, professor of zoology in Odessa, is adapted to make one feel more comfortable, inasmuch as it brings into view the possibility of an antagonism to these infecting organisms, and explains the method of nature's cures. Metschnikoff observed that the wandering cells—the white blood corpuscles—after the manner of amœbæ, surround, hold fast, digest ('devour,' hence 'phagocytes'), and thus render harmless the bacteria which have entered the body. . . . The prophylactic effects of inoculation are explained on the theory that by means of this operation the wandering cells are prepared, as it were, for subsequent accidental irruptions of similar pathogenic bacteria, are habituated or compelled thereby to at once devour such organisms when they enter the body spontaneously, and thus to render them harmless. Inoculation would thus be a sort of training or education of the phagocytes. The immunity of many persons from infectious diseases, so far as it is not effected by inoculations, would by analogy be explained on the theory that with such individuals the phagocytes are from the outset so constituted that they at once render harmless any stray bacteria which come within their domain by immediately devouring them. . . . When . . . in spite of the phagocytes, the patients die of infectious diseases, the fact is to be explained by the excessive number of the bacteria present, which is so great that the phagocytes are unequal to the task of 'devouring' them all."—J. H. Baas, *Outlines of the History of Medicine*, pp. 1007-1009.

19th Century.—Sanitary Science and Legislation.—"Together with the growth of our knowledge of the causes of disease there has been . . . slowly growing up also a new kind of warfare against disease. It is this science

of hygiene which is now promising to transform all the old traditional ways of dealing with disease, and which now makes possible the organisation of the conditions of health. And this science of hygiene, it must be repeated, rests on the exact knowledge of the causes of disease which we are now obtaining. . . . At the beginning of the eighteenth century Mead, a famous physician of that day, whose reputation still lives, had proposed the formation of a central board of health to organise common measures for the public safety. It was not, however, until more than a hundred years later, in 1831, under the influence of the terror of cholera, that this first step was taken; so that, as it has been well said and often since proved, 'panic is the parent of sanitation.' In 1842 Sir Edwin Chadwick issued his report on 'The Sanitary Condition of the Labouring Population of Great Britain.' This report produced marked effect, and may truly be said to have inaugurated the new era of collective action, embodying itself in legislation directed to the preservation of national health, an era which is thus just half a century old. Chadwick's report led to a Royal Commission, which was the first step in the elevation of public health to a State interest; and a few years later (1847) Liverpool, and immediately afterwards London, appointed the first medical officers of health in Great Britain. In 1848 another epidemic of cholera appeared, and a General Board of Health was established. During this epidemic Dr. Snow began those inquiries which led to the discovery that the spread of the disease was due to the contamination of drinking-water by the intestinal discharges of patients. That discovery marked the first great stage in the new movement. Henceforth the objects to be striven for in the evolution of sanitation became ever more clear and precise, and a succession of notable discoveries in connection with various epidemics enlarged the sphere of sanitation, and revealed new possibilities in the prevention of human misery."—H. Ellis, *The Nationalisation of Health*, pp. 21-24.—"Of all countries of the civilized world, none has a sanitary code so complete and so precise as England. In addition, English legislation is distinguished from that of other countries, by the fact that the principal regulations emanate from Parliament instead of being simple administrative orders. Thus the legislation is the work of the nation, which has recognised its necessity in its own interest. Consequently the laws are respected, and, as a rule, religiously observed, without objection or murmur. In the whole country, the marvellous results which have been produced can be seen. Thanks to these laws, the rate of mortality has been lowered, the mean duration of life increased, the amount of sickness decreased. They have greatly alleviated the misery in the houses of the poor, who, thanks to sanitary measures, have a better prospect of recovering their health and the means of providing for their subsistence and that of their families. . . . The sanitary administration of England is, in accordance with the Public Health Act of 1875, in the hands of a central authority, the Local Government Board; and local authorities, the Local Boards of Health. The Local Government Board consists of a president, nominated by the Queen, and the following ex-officio members:—the Lord President of the

Privy Council, all the principal Secretaries of State for the time being, the Lord Privy Seal, the Chancellor of the Exchequer, a Parliamentary Secretary, and a permanent Secretary. The President and Secretaries are, properly speaking, the directors of the Local Government Board, the other members being only consulted on matters of prime importance. Nine special departments are controlled by the Local Government Board: 1. Poor-law administration. 2. Legal questions. 3. Sanitary regulations respecting buildings. 4. Sanitary regulations respecting sewers, streets, etc. 5. Medical and hygienic matters. 6. Vaccination. 7. The Hygiene of factories. 8. The water supply of London. 9. Statistics. Medical and sanitary matters are under the direction of a Medical Officer, and an Assistant Medical Officer."—A. Palmberg, *Treatise on Public Health: England*, ch. 1.—"The United States have no uniform legislation for the organization of public hygiene to the present day. Each State organizes this service as it chooses. . . . That which characterizes the sanitary organization of the States is the fact that, in a large number of States, the right is granted to the sanitary administrations to carry before the justices the infractions of the regulations on this subject. It is a similar organization to that of Great Britain, with a little less independence, and it is the logical result of the general system of administration which exists in the American Union. . . . Without doubt the day will come when the National Board of Health will be by act of Congress, with the consent of all the States, the real superior council of public hygiene of the American Union."—E. Sève, *On the General Organization of Public Hygiene (Proceedings, Internat'l Sanitary Conference, 1881)*.—"The General Government [of the United States] can do little in the way of compulsory legislation, which might interfere with the action of the several States to control their own sanitary affairs. It is possible that upon the ground of power to legislate with regard to commerce, it might establish some general system of quarantine and do something toward the prevention of the pollution of navigable streams; but it could probably only do this with such restrictions and exceptions as would make its action of little practical value, unless, indeed, it should resort to its right of eminent domain, and become liable for all damages, individual or municipal, which its action might cause. . . . No one would deny that the General Government can properly create an organization for the purpose of collecting and diffusing information on sanitary matters; but comparatively few understand how much real power and influence such an organization might acquire without having the slightest legal authority to enforce any of its recommendations. The passing of sanitary laws, and the granting to a certain department the power to enforce these laws, will not ensure good public health unless the public at large supports those laws intelligently, and it can only do this through State and municipal sanitary organizations. The General Government might do much to promote the formation of such organizations, and to assist them in various ways. . . . By the 'act to prevent the introduction of infectious or contagious diseases into the United States, and to establish a national board of health,' approved March 3, 1879, the first step has been taken in

the direction above indicated. The act provides for a national board of health, to consist of seven members, appointed by the President, and of four officers detailed from the Medical Department of the Army, Medical Department of the Navy, and the Marine Hospital Service, and the Department of Justice respectively. No definite term of Office is prescribed, the Board being essentially provisional in character. The duties of the board are 'to obtain information upon all matters affecting the public health, to advise the several departments of the government, the executives of the several States, and the Commissioners of the District of Columbia, on all ques-

B. C. 222.—Destruction and restoration.—The last exploit of Cleomenes of Sparta, in his struggle with the Achæan League and its ally, the king of Macedonia, before the fatal field of Sellasia, was the capture of Megalopolis, B. C. 222. Most of the citizens escaped. He offered to restore their town to them if they would forsake the League. They refused, and he destroyed it, so utterly that its restoration was believed to be impossible. But in the following year the inhabitants were brought back and Megalopolis existed again, though never with its former importance.—Polybius, *Histories*, bk. 2, ch. 55 and after (v. 1).

B. C. 194-183.—In the Achæan League.—"The city of Megalopolis held at this time [B. C. 194-183] the same sort of position in the Achæan League which the State of Virginia held in the first days of the American Union. Without any sort of legal preëminence, without at all assuming the character of a capital, Megalopolis was clearly the first city of the League, the city which gave the nation the largest proportion of its leading statesmen. Megalopolis, like Virginia, was 'the Mother of Presidents,' and that too of Presidents of different political parties. As Virginia produced both Washington and Jefferson, so Megalopolis, if she produced Philopoimen and Lykertas, produced also Aristainos and Diophanes."—E. A. Freeman, *Hist. of Federal Gov't*, ch. 9, sect. 2.

MEGARA.—Megara, the ancient Greek city and state whose territory lay between Attica and Corinth, forming part of the Corinthian isthmus, "is affirmed to have been originally settled by the Dorians of Corinth, and to have remained for some time a dependency of that city. It is farther said to have been at first merely one of five separate villages—Megara, Heræa, Peiræa, Kynosura, Tripodiskus—inhabited by a kindred population, and generally on friendly terms, yet sometimes distracted by quarrels [see CORINTH: B. C. 745-725]. . . . Whatever may be the truth respecting this alleged early subjection of Megara, we know it in the historical age, and that too as early as the 14th Olympiad, only as an independent Dorian city, maintaining the integrity of its territory under its leader Orsippus, the famous Olympic runner, against some powerful enemies, probably the Corinthians. It was of no mean consideration, possessing a territory which

extended across Mount Gerancia to the Corinthian Gulf, on which the fortified town and port of Pégæ, belonging to the Megarians, was situated. It was mother of early and distant colonies,—and competent, during the time of Solon, to carry on a protracted contest with the Athenians, for the possession of Salamis; wherein, although the latter were at last victorious, it was not without an intermediate period of ill-success and despair.” —G. Grote, *Hist. of Greece*, pt. 2, ch. 9.—See, also, GREECE: THE MIGRATIONS.

MEGARA OF CARTHAGE, The. See CARTHAGE: DIVISIONS.

MEGIDDO.—The valley of Megiddo, forming the western part of the great Plain of Esdraelon, in northern Palestine—stretching from the valley of the Jordan to the Mediterranean Sea, along the course of the river Kishon—was so often the meeting place of ancient armies that it seems to have come to be looked upon as the typical battle-ground, and apparently the name Armageddon in Revelation is an allusion to it in that sense. The ancient city of Megiddo has been identified in site with the present town of Lediún, which is the Legio of the Romans—the station of a Roman legion.

MEGISTANES, The.—“The king [of the Parthian monarchy] was permanently advised by two councils, consisting of persons not of his own nomination, whom rights, conferred by birth or office, entitled to their seats. One of these was a family conclave, . . . or assembly of the full-grown males of the Royal House; the other was a senate comprising both the spiritual and the temporal chiefs of the nation, the Sophi, or ‘Wise Men,’ and the Magi, or ‘Priests.’ Together these two bodies constituted the Megistanes, the ‘Nobles’ or ‘Great Men.’”—G. Rawlinson, *Sixth Great Oriental Monarchy*, ch. 6.

MELANESIA.—“Under the name of Melanesia, we comprehend all the islands and groups of islands stretching from New Guinea in the west to Viti or Fiji in the east; that is to say, the domain chiefly occupied by the Papuan race. The series begins with the still but little explored New Guinea, with its surrounding islands; and the Admiralty Isles, New Britain, and New Ireland, to the north-east. Proceeding still eastwards, or rather to the south-east, we meet with the Solomon Islands, the Santa Cruz or Queen Charlotte group, the New Hebrides, the French

settlements of New Caledonia and the Loyalty Islands, and lastly, considerably farther east, the Fiji Archipelago.”—A. R. Wallace, *Australasia (Stanford's Compendium)*, ch. 22.—The Solomon Islands, the Santa Cruz group, and the northern New Hebrides were discovered by Spanish navigators between 1567 and 1606. The French voyager Bougainville added some discoveries in 1768, which were carried farther by Captain Cook in 1774. Between these explorations and the visits of whalers and missionaries in the present century there is every reason, says Dr. Coddington, “to believe that all memory and tradition of white men had died away in the Solomon Islands and Santa Cruz.”—R. H. Coddington, *The Melanesians*, pp. 1-10.—The northerly Solomon Islands are controlled by Germany, the southerly by Great Britain. A German protectorate was declared in 1884 over the New Britain and New Ireland groups and several adjacent islands, which were then re-named the Bismarck Archipelago. The Admiralty Islands have also been taken by Germany. New Caledonia, the Loyalty Islands, and the New Hebrides belong to France, the former being a penal colony.

MEMLUKS. See MAMELUKES.

MEMPHIS, Egypt.—“The foundation of Memphis is the first event in Egyptian history, the one large historical incident in the reign of the first king, who emerges a real man from the shadowland which the Egyptians called the reign of the gods. . . . Menes, the founder of Memphis and Egyptian history, came from the south. Civilisation descended the Nile. His native place was Thinis, or This, in Upper Egypt, a still older town, where his shadowy predecessors ruled. . . . A great engineering work was the first act of the builder. He chose his site . . . but the stream was on the wrong side, flowing below the Libyan chain, flowing over where the city should be, offering no water-bulwark against the invader from the eastern border. So he raised, a few miles to the south, a mighty dyke, and turned the river into the present course, founding the city on the west bank, with the desert behind and the Nile before. . . . The new city received a name which reflects the satisfaction of the ancient founder; he called it Mennufre, ‘the Good’ or ‘Perfect Mansion.’ This was the civil name. . . . The civil name is

the parent of the Greek Memphis and the Hebrew Moph, also found in the form Noph."—R. S. Poole, *Cities of Egypt*, ch. 2.—See, also, EGYPT: THE OLD EMPIRE AND THE MIDDLE EMPIRE.

MENDICANT ORDERS.—Franciscans.—Dominicans.—"This period [12-13th centuries], so prolific in institutions of every sort, also gave birth to the Mendicant orders, a species of spiritual chivalry still more generous and heroic than that which we have just treated [the military-religious orders], and unique in history. . . . Many causes combined to call them into existence. In proportion as the Church grew wealthy her discipline relaxed, and dangers menaced her on every side. . . . The problem thus presented to the Church was taken up at the opening of the 13th century, and thrown into practical shape by two men equally eminent in intellectual endowments and spiritual gifts. While each solved it in his own way, they were both attached to each other by the closest friendship. Dominic, a member of the powerful house of Guzman, was born in the year 1170, at Callaruega (Calahorra, in Old Castile), a village in the diocese of Osma. While pursuing his studies in the university of Valencia, he was distinguished by a spirit of charity and self-sacrifice. . . . Diego, Bishop of Osma, . . . a man of severe character, and ardently devoted to the good of the Church, found in Dominic one after his own heart. He took the young priest with him on a mission which he made to the south of France." Dominic was finally left in charge of the mission. "His peaceful disposition, his spirit of prayer, his charity, forbearance, and patient temper formed a consoling contrast to the bloody crusade which had recently been set on foot against the Albigenses. After spending ten years in this toilsome and thankless mission, labouring only for love of God and the profit of souls, he set out for Rome, in 1215, with his plans fully matured, and submitted to Pope Innocent III. the project of giving to the Church a new method of defence, in an order which should combine the contemplative life of the monk with the active career of a secular priest. . . . Innocent gave his sanction to Dominic's project, provided he would manage to bring it under some of the existing Rules. Dominic accordingly selected the Rule of St. Augustine, introducing a few changes, with a view to greater severity, taken from the Rule of the Premonstratensians. That the members of the new order might be free to devote themselves entirely to their spiritual labours, they were forbidden to accept any property requiring their active administration, but were permitted to receive the incomes of such as was administered by others. Property, therefore, might be held by the Order as a body, but not administered by

its members. Pope Honorius III. confirmed the action of his illustrious predecessor, and approved the Order in the following year, giving it, from its object, the name of the 'Order of Friars Preachers' ('Ordo Prædicatorum, Fratres Prædicatorum'). . . . Dominic founded, in the year 1206, an Order of Dominican nuns. . . . The dress of the Dominicans is a white garment and scapular, resembling in form that of the Augustinians, with a black cloak and a pointed cap. Francis of Assisi, the son of a wealthy merchant named Bernardini, was born in the year 1182, in Assisi, in Umbria. His baptismal name was John, but from his habit of reading the romances of the Troubadours in his youth, he gradually acquired the name of Il Francesco, or the Little Frenchman. . . . When about twenty-four years of age, he fell dangerously ill, and, while suffering from this attack, gave himself up to a train of religious thought which led him to consider the emptiness and uselessness of his past life. . . . He . . . conceived the idea of founding a society whose members should go about through the whole world, after the manner of the apostles, preaching and exhorting to penance. . . . His zeal gradually excited emulation, and prompted others to aspire after the same perfection. His first associates were his townsmen, Bernard Quintavalle and Peter Cattano, and others soon followed. Their habit consisted of a long brown tunic of coarse woollen cloth, surmounted by a hood of the same material, and confined about the waist with a hempen cord. This simple but ennobling dress was selected because it was that of the poor peasants of the surrounding country. . . . He sent his companions, two-and-two, in all directions, saying to them in taking leave: 'Go; always travel two-and-two. Pray until the third hour; then only may you speak. Let your speech be simple and humble.' . . . With St. Francis, absolute poverty was not only a practice, it was the essential principle on which he based his Order. Not only were the individual members forbidden to have any personal property whatever, but neither could they hold any as an Order, and were entirely dependent for their support upon alms. . . . Hence the chief difference between mendicant and other monastic orders consists in this, that, in the former, begging takes the place of the ordinary vow of personal poverty. . . . In 1223, Pope Honorius III. approved the Order of Franciscans (Fratres Minores), to which . . . Innocent III. had given a verbal sanction in 1210."—J. Alzog, *Manual of Univ. Church Hist.*, sect. 247 (n. 2).—"They were called 'Friars' because, out of humility, their founders would not have them called 'Father' and 'Dominus,' like the monks, but simply 'Brother' ('Frater,' 'Frère,' 'Friar'). . . . Dominic gave to his order the name of Preaching Friars; more commonly they were styled Dominicans, or, from the colour of their habits, Black Friars. . . . The Franciscans were styled by their founder 'Fratres Minores'—lesser brothers, Friars Minors; they were more usually called Grey Friars, from the colour of their habits, or Cordeliers, from the knotted cord which formed their characteristic girdle."—E. L. Cutts, *Scenes and Characters of the Middle Ages*, ch. 5.—"People talk of 'Monks and Friars' as if these were convertible terms. The truth is that the difference between the Monks and the Friars was

MENDICANT ORDERS.

almost one of kind. The Monk was supposed never to leave his cloister. The Friar in St. Francis's first intention had no cloister to leave."

—A. Jessopp, *The Coming of the Friars*, 1.

MENHIR.—Meaning literally "long-stone." The name is usually given to single, upright stones, sometimes very large, which are found in the British islands, France and elsewhere, and which are supposed to be the rude sepulchral monuments of some of the earlier races, Celtic and pre-Celtic. —Sir J. Lubbock, *Prehistoric Times*, ch. 5.

MENNONITES, The.—"The Mennonites take their name from Menno Simons, born in Witmarsum, Holland, in 1493. He entered the priesthood of the Roman Catholic Church; . . . renounced Catholicism early in 1536, and was baptized at Leeuwarden. In the course of the following year he was ordained a minister in what was then known as the Old Evangelical or Waldensian Church. From this time on to his death, in 1559, he was active, . . . traveling through northern Germany, and preaching everywhere. The churches which he organized as a result of his labors rejected infant baptism and held to the principle of non-resistance. A severe persecution began to make itself felt against his followers, the Mennonites; and, having heard accounts of the colony established in the New World by William Penn, they began to emigrate to Pennsylvania near the close of the 17th century. . . . Successive immigrations from Holland, Switzerland, Germany, and, in the last twenty-five years, from southern Russia, have resulted in placing the great majority of Mennonites in the world on American soil, in the United States and Canada."—H. K. Carroll, *The Religious Forces of the U. S.*, ch. 28.

MERCY FOR THE REDEMPTION.

MERCED, The order of La.—An order of knighthood founded by King Jayme, of Aragon, especially for the collecting of money with which to ransom captives from the Moors.

MERCENARIES, Revolt of the. See CARTHAGE: B. C. 241-238.

MERCHANT ADVENTURERS.—"The original Company of the Merchant Adventurers carried on trade chiefly with the Netherlands. . . . In distinction from the staplers, who dealt in certain raw materials, the Merchant Adventurers had the monopoly of exporting certain manufactured articles, especially cloths. Though of national importance, they constituted a strictly private company, and not, like the staplers, an administrative organ of the British government. The former were all subjects of the English crown; the staplers were made up of aliens as well as Englishmen. . . . To carry on foreign trade freely in wool as well as in cloth, a merchant had to join both companies. . . . The earliest charter granted to it as an organized association dates from the year 1407. Their powers were greatly increased by Henry VII. The soul of this society, and perhaps its original nucleus, was the Mercers' Company of London. . . . Though the most influential Merchant Adventurers resided in London, there were many in other English towns. . . . The contrast between the old Gild Merchant and the Company of Merchant Adventurers is striking. The one had to do wholly with foreign trade, and its members were forbidden to exercise a manual occupation or even to be retail shopkeepers; the other consisted mainly of small shopkeepers and artisans. The line of demarcation between merchants and manual craftsmen was sharply drawn by the second half of the sixteenth century, the term 'merchant' having already acquired its modern signification as a dealer on an extensive scale. Besides the Company of Merchant Adventurers trading to the Low Countries—which during the eighteenth century was called the Hamburg Company—various new Companies of Merchant Adventurers trading to other lands arose in the sixteenth and seventeenth centuries, especially during the reigns of Elizabeth and her immediate successors. Among them were the Russian or Muscovy Company, the Turkey or Levant Company, the Guinea Company, the Morocco Company, the Eastland Company, the Spanish Company, and the East India Company."—C. Gross, *The Gild Merchant*, pp. 148-156.

MERCHANT TAYLORS' SCHOOL. See EDUCATION, MODERN: EUROPEAN COUNTRIES.—ENGLAND.

MERCIA, The Kingdom of.—A kingdom formed at the close of the 6th century by the West Angles, on the Welsh border, or March. The people who formed it had acquired the name of Men of the March, from which they came to be called Mercians, and their kingdom Mercia. In the next century, under King Penda, its territory and its power were greatly extended, at the expense of Northumbria.—J. R. Green, *The Making of England*.—See, also, ENGLAND: A. D. 547-633.

MERCY FOR THE REDEMPTION OF CHRISTIAN CAPTIVES, The Order of.—"For the institution of this godlike order, the Christian world was indebted to Pope Innocent

III., at the close of the 12th century. . . . The exertions of the order were soon crowned with success. One third of its revenues was appropriated to the objects of its foundation, and thousands groaning in slavery were restored to their country. . . . The order . . . met with so much encouragement that, in the time of Alberic, the monk (who wrote about forty years after its institution), the number of monastic houses amounted to 600, most of which were situated in France, Lombardy and Spain."—S. A. Dunham, *Hist. of Spain and Portugal*, bk. 3, sect. 3, ch. 4 (v. 4).

MERU. See MERV.

MERV, OR MERU: A. D. 1221.—Destruction by Jingis Khan.—In the merciless march through Central Asia of the awful Mongol horde set in motion by Jingis Khan, the great city of Meru (modern Merv) was reached in the autumn of A. D. 1220. This was "Meru Shahjan, i. e., Meru the king of the world, one of the four chief cities of Khorassan, and one of the oldest cities of the world. It had been the capital of the great Seljuk Sultans Melikshah and Sanjar, and was very rich and populous. It was situated on the banks of the Meri el rond, also called the Murjab. . . . The siege commenced on the 25th of February, 1221. The governor of the town . . . sent a venerable imam as an envoy to the Mongol camp. He returned with such fair promises that the governor himself repaired to the camp, and was loaded with presents; he was asked to send for his chief relations and friends; when these were fairly in his power, Tulni [one of the sons of Jingis Khan] ordered them all,

including the governor, to be killed. The Mongols then entered the town, the inhabitants were ordered to evacuate it with their treasures; the mournful procession, we are told, took four days to defile out. . . . A general and frightful massacre ensued; only 400 artisans and a certain number of young people were reserved as slaves. The author of the 'Jhankushai' says that the Seyid Yzz-ud-din, a man renowned for his virtues and piety, assisted by many people, were thirteen days in counting the corpses, which numbered 1,300,000. Ibn al Ethir says that 700,000 corpses were counted. The town was sacked, the mausoleum of the Sultan Sanjar was rifled and then burnt, and the walls and citadel of Meru levelled with the ground."—H. H. Howorth, *Hist. of the Mongols*, v. 1, p. 87.—See, also, KHORASSAN: A. D. 1220-1221.

B. C. 338.—Territories restored by Philip of Macedon. See GREECE: B. C. 357-336.

B. C. 184.—Revolt from the Achæan League.—A faction in Messene which was hostile to the Achæan League having gained the ascendancy, B. C. 184, declared its secession from the League. Philopæmen, the chief of the League, proceeded at once with a small force to reduce the Messenians to obedience, but was taken prisoner and was foully executed by his enemies. Bishop Thirlwall pronounces him "the last great man whom Greece produced." The death of Philopæmen was speedily avenged on those who caused it and Messene was recovered to the League.—C. Thirlwall, *Hist. of Greece*, ch. 65.

ALSO IN: Plutarch, *Philopæmen*.

MESSENE (MODERN MESSINA), in Sicily.—The founding of the city.—“Zancle was originally colonised by pirates who came from Cyme the Chalcidian city in Opicia. . . . Zancle was the original name of the place, a name given by the Sicels because the site was in shape like a sickle, for which the Sicel word is Zancle. These earlier settlers were afterwards driven out by the Samians and other Ionians, who when they fled from the Persians found their way to Sicily. Not long afterwards Anaxilas, the tyrant of Rhegium, drove out these Samians. He then re-peopled their city with a mixed multitude, and called the place Messene, after his native country.”—Thucydides, *History*, trans. by Jowett, bk. 6, sect. 4.

MESSENIAN WARS, The First and Second.—The Spartans were engaged in two successive wars with their neighbors of Messenia, whose territory, adjoining their own in the southwestern extremity of Peloponnesus, was rich, prosperous and covetable. “It was unavoidable that the Spartans should look down with envy from their bare rocky ridges into the prosperous land of their neighbours and the terraces close by, descending to the river, with their well-cultivated plantations of oil and wine. Besides, the Dorians who had immigrated into Messenia had, under the influence of the native population and of a life of comfortable ease, lost their primitive character. Messenia seemed like a piece of Arcadia, with which it was most intimately connected. . . . Hence this was no war of Dorians against Dorians; it rather seemed to be Sparta's mission to make good the failure of the Dorization of Messenia which had sunk back into Pelasgic conditions of life, and to unite with herself the remains of the Dorian people still surviving there. In short, a variety of motives contributed to provoke a forcible extension of Spartan military power on this particular side.”—E. Curtius, *Hist. of Greece*, bk. 2, ch. 1 (p. 1).—The First Messenian War was commenced B. C. 745 and lasted twenty years, ending in the complete subjugation of the Messenians, who were reduced to a state of servitude like that of the Helots of Sparta. After enduring the oppression for thirty-nine years, the Messenians rose in revolt against their Spartan masters, B. C. 685. The leader and great hero of this Second Messenian War was Aristomenes, whose renown became so great in the despairing struggle that the latter was called among the ancients the Aristomenean War. But all the valor and self-sacrifice of the unhappy Messenians availed nothing. They gave up the contest, B. C. 668; large numbers of them escaped to other lands and those who remained were reduced to a more wretched condition than before.—C. Thirlwall, *Hist. of Greece*, ch. 9.—See, also, SPARTA: B. C. 743-510.

The Third.—“The whole of Laconia [B. C. 464] was shaken by an earthquake, which opened great chasms in the ground, and rolled down huge masses from the highest peaks of Taygetus: Sparta itself became a heap of ruins, in which not more than five houses are said to have

been left standing. More than 20,000 persons were believed to have been destroyed by the shock, and the flower of the Spartan youth was overwhelmed by the fall of the buildings in which they were exercising themselves at the time.”—C. Thirlwall, *Hist. of Greece*, ch. 17.—The Helots of Sparta, especially those who were descended from the enslaved Messenians, took advantage of the confusion produced by the earthquake, to rise in revolt. Having secured possession of Ithome, they fortified themselves in the town and withstood there a siege of ten years,—sometimes called the Third Messenian War. The Spartans invited the Athenians to aid them in the siege, but soon grew jealous of their allies and dismissed them with some rudeness. This was one of the prime causes of the animosity between Athens and Sparta which afterward flamed out in the Peloponnesian War. In the end, the Messenians at Ithome capitulated and were allowed to quit the country; whereupon the Athenians settled them at Naupactus, on the Corinthian gulf, and so gained an ardent ally, in an important situation.—Thucydides, *History*, bk. 1, sect. 101-103.—Nearly one hundred years later (B. C. 369) when Thebes, under Epaminondas, rose to power in Greece and Sparta was humiliated, it was one of the measures of the Theban statesman to found at Ithome an important city which he named Messene, into which the long oppressed Messenians were gathered, from slavery and from exile, and were organized in a state once more, free and independent.—C. Thirlwall, *Hist. of Greece*, ch. 39.

METHODISTS: Origin of the Religious Denomination.—“The term Methodist was a college nickname bestowed upon a small society of students at Oxford who met together between 1729 and 1735 for the purpose of mutual improvement. They were accustomed to communicate every week, to fast regularly on Wednesdays and Fridays, and on most days during Lent; to read and discuss the Bible in common, to abstain from most forms of amusement and luxury, and to visit sick persons and prisoners in the gaol. John Wesley, the master-spirit of this society, and the future leader of the religious revival of the eighteenth century, was born in 1703, and was the second surviving son of Samuel Wesley, the Rector of Epworth, in Lincolnshire. . . . The society hardly numbered more than fifteen members, and was the object of much ridicule at the university; but it included some men who afterwards played considerable parts

in the world. Among them was Charles, the younger brother of John Wesley, whose hymns became the favourite poetry of the sect, and whose gentler, more submissive, and more amiable character, though less fitted than that of his brother for the great conflicts of public life, was very useful in moderating the movement, and in drawing converts to it by personal influence. Charles Wesley appears to have been the first to originate the society at Oxford; he brought Whitefield into its pale, and besides being the most popular poet he was one of the most persuasive preachers of the movement. There, too, was James Hervey, who became one of the earliest links connecting Methodism with general literature."—W. E. H. Lecky, *History of Eng. in the 18th Century*, ch. 9 (v. 2).

METHUEN, Rout of.—The first Scotch army assembled by Robert Bruce after he had been crowned king of Scotland, was surprised and routed by Aymer de Valence, June 26, 1306.—C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages*, v. 2, ch. 14.

METŒCI.—"Resident aliens, or Metœci, are non-citizens possessed of personal freedom, and settled in Attica. Their number, in the flourishing periods of the State, might amount to 45,000, and therefore was about half that of the citizens."—G. F. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 3, sect. 2.

METON, The year of.—"Hitherto [before the age of Pericles] the Athenians had only had the Octaëteris, i. e., the period of eight years, of which three were composed of thirteen months, in order thus to make the lunar years correspond to the solar. But as eight such solar

years still amount to something short of 99 lunar months, this cycle was insufficient for its purpose. . . . Meton and his associates calculated that a more correct adjustment might be obtained within a cycle of 6,940 days. These made up 235 months, which formed a cycle of 19 years; and this was the so-called 'Great Year,' or 'Year of Meton.'"—E. Curtius, *Hist. of Greece*, bk. 3, ch. 3 (v. 2).

MEXICAN PICTURE-WRITING. See AZTEC AND MAYA PICTURE-WRITING.

MEXICO.

Ancient: The Maya and Nahua peoples and their civilization.—"Notwithstanding evident marks of similarity in nearly all the manifestations of the progressional spirit in aboriginal America, in art, thought, and religion, there is much reason for and convenience in referring all the native civilization to two branches, the Maya and the Nahua, the former the more ancient, the latter the more recent and wide-spread. . . . It is only, however, in a very general sense that this classification can be accepted, and then only for practical convenience in elucidating the subject; since there are several nations that must be ranked among our civilized peoples, which, particularly in the matter of language, show no Maya nor Nahua affinities. Nor is too much importance to be attached to the names Maya and Nahua, by which I designate these parallel civilizations. The former is adopted for the reason that the Maya people and tongue are commonly regarded as among the most ancient in all the Central American region, a region where formerly flourished the civilization that left such wonderful remains at Palenque, Uxmal, and Copan; the latter as being an older designation than either Aztec or Toltec, both of which stocks the race Nahua includes. The civilization of

what is now the Mexican Republic, north of Tehuantepec, belonged to the Nahua branch, both at the time of the conquest and throughout the historic period preceding. Very few traces of the Maya element occur north of Chiapas, and these are chiefly linguistic, appearing in two or three nations dwelling along the shores of the Mexican gulf. In published works upon the subject the Aztecs are the representatives of the Nahua element; indeed, what is known of the Aztecs has furnished material for nine tenths of all that has been written on the American civilized nations in general. The truth of the matter is that the Aztecs were only the most powerful of a league or confederation of three nations, which in the 16th century, from their capitals in the valley, ruled central Mexico."—H. H. Bancroft, *Native Races of the Pacific States*, v. 2, ch. 2.—"The evidence . . . has pointed—with varying force, but with great uniformity of direction—towards the Central or Usumacinta region [Central America], not necessarily as the original cradle of American civilization, but as the most ancient home to which it can be traced by traditional, monumental, and linguistic records. . . . Throughout several centuries preceding the Christian era, and perhaps one or

two centuries following, there flourished in Central America the great Maya empire of the Chanes, Culhuas, or Serpents, known to its foes as Xibalba, with its centre in Chiapas at or near Palenque, and with several allied capitals in the surrounding region. Its first establishment at a remote period was attributed by the people to a being called Votan, who was afterwards worshipped as a god. . . . From its centre in the Usumacinta region the Votanic power was gradually extended north-westward towards Anáhuac, where its subjects vaguely appear in tradition as Quinames, or giants. It also penetrated north-eastward into Yucatan, where Zamná was its reputed founder, and the Cocomes and Itzas probably its subjects. . . . The Maya empire seems to have been in the height of its prosperity when the rival Nahua power came into prominence, perhaps two or three centuries before Christ. The origin of the new people and of the new institutions is as deeply shrouded in mystery as is that of their predecessors. . . . The Plumed Serpent, known in different tongues as Quetzalcoatl, Gucumatz, and Cukulcan, was the being who traditionally founded the new order of things. The Nahua power grew up side by side with its Xibalban predecessor, having its capital Tulan apparently in Chiapas. Like the Maya power, it was not confined to its original home, but was borne . . . towards Anáhuac. . . . The struggle on the part of the Xibalbans seems to have been that of an old effete monarchy against a young and progressive people. Whatever its cause, the result of the conquest was the overthrow of the Votanic monarchs at a date which may be approximately fixed within a century before or after the beginning of our era. From that time the ancient empire disappears from traditional history. . . . Respecting the ensuing period of Nahua greatness in Central America nothing is recorded save that it ended in revolt, disaster, and a general scattering of the tribes at some period probably preceding the 5th century. The national names that appear in connection with the closing struggles are the Toltecs, Chichimecs, Quichés, Nohualcas, and Tutul Xius, none of them apparently identical with the Xibalbans. . . . Of the tribes that were successively defeated and forced to seek new homes, those that spoke the Maya dialects, although considering themselves Nahuas, seem to have settled chiefly in the south and east. Some of them afterwards rose to great prominence in Guatemala and Yucatan. . . . The Nahua-speaking tribes as a rule established themselves in Anáhuac and in the western and north-western parts of Mexico. . . . The valley of Mexico and the country immediately adjoining soon became the centre of the Nahuas in Mexico."—The same, *v.* 5, *ch.* 3.—See, also, AMERICAN ABORIGINES: MAYAS; and AZTEC AND MAYA PICTURE-WRITING.

Ancient: the Toltec empire and civilization.—Are they mythical?—"The old-time story, how the Toltecs in the 6th century appeared on the Mexican table-land, how they were driven out and scattered in the 11th century, how after a brief interval the Chichimecs followed their footsteps, and how these last were succeeded by the Aztecs who were found in possession,—the last two, and probably the first, migrating in immense hordes from the far north-west,—all this is sufficiently familiar to readers of Mexican history, and is furthermore

fully set forth in the 5th volume of this work. It is probable, however, that this account, accurate to a certain degree, has been by many writers too literally construed; since the once popular theory of wholesale national migrations of American peoples within historic times, and particularly of such migrations from the north-west, may now be regarded as practically unfounded. The 6th century is the most remote period to which we are carried in the annals of Anáhuac by traditions sufficiently definite to be considered in any proper sense as historic records. . . . At the opening . . . of the historic times, we find the Toltecs in possession of Anáhuac and the surrounding country. Though the civilization was old, the name was new, derived probably, although not so regarded by all, from Tollan, a capital city of the empire, but afterwards becoming synonymous with all that is excellent in art and high culture. Tradition imputes to the Toltecs a higher civilization than that found among the Aztecs, who had degenerated with the growth of the warlike spirit, and especially by the introduction of more cruel and sanguinary religious rites. But this superiority, in some respects not improbable, rests on no very strong evidence, since this people left no relics of that artistic skill which gave them so great traditional fame; there is, however, much reason to ascribe the construction of the pyramids at Teotihuacan and Cholula to the Toltec or a still earlier period. Among the civilized peoples of the 16th century, however, and among their descendants down to the present day, nearly every ancient relic of architecture or sculpture is accredited to the Toltecs, from whom all claim descent. . . . So confusing has been the effect of this universal reference of all traditional events to a Toltec source, that, while we can not doubt the actual existence of this great empire, the details of its history, into which the supernatural so largely enters, must be regarded as to a great extent mythical. There are no data for fixing accurately the bounds of the Toltec domain, particularly in the south. There is very little, however, to indicate that it was more extensive in this direction than that of the Aztecs in later times, although it seems to have extended somewhat farther northward. On the west there is some evidence that it included the territory of Michoacan, never subdued by the Aztecs; and it probably stretched eastward to the Atlantic. . . . During the most flourishing period of its traditional five centuries of duration, the Toltec empire was ruled by a confederacy, similar in some respects to the alliance of later date between Mexico, Tezcuco and Tlacopan. The capitals were Culhuacan, Otompan, and Tollan, the two former corresponding somewhat in territory with Mexico and Tezcuco, while the latter was just beyond the limits of the valley toward the north-west. Each of these capital cities became in turn the leading power in the confederacy. Tollan reached the highest eminence in culture, splendor, and fame, and Culhuacan was the only one of the three to survive by name the bloody convulsions by which the empire was at last overthrown, and retain anything of her former greatness. Long-continued civil wars, arising chiefly from dissensions between rival religious factions, . . . gradually undermine the imperial thrones. . . . So the kings of Tollan, Culhuacan, and Otompan, lose, year by year,

their prestige, and finally, in the middle of the 11th century, are completely overthrown, leaving the Mexican tableland to be ruled by new combinations of rising powers."—H. H. Bancroft, *Native Races of the Pacific States*, v. 2, ch. 2.—"Long before the Aztecs, a Toltec tribe called the Acolhuas, or Culhuas, had settled in the valley of Mexico. The name is more ancient than that of Toltec, and the Mexican civilization might perhaps as appropriately be called Culhua as Nahua. The name is interpreted 'crooked' from coloa, bend; also 'grandfather' from colli. Culhuacan might therefore signify Land of Our Ancestors."—The same, *Hist. of the Pacific States*, v. 4, p. 23, foot-note.—"The most venerable traditions of the Maya race claimed for them a migration from 'Tollan in Zuyva.' . . . This Tollan is certainly none other than the abode of Quetzalcoatl. . . . The cities which selected him as their tutelary deity were named for that which he was supposed to have ruled over. Thus we have Tollan and Tollantzinco ('behind Tollan') in the Valley of Mexico, and the pyramid Cholula was called 'Tollan-Cholollan,' as well as many other Tollans and Tulas among the Nahuatl colonies. The natives of the city of Tula were called, from its name, Tolteca, which simply means 'those who dwell in Tollan.' And who, let us ask, were these Toltecs? They have hovered about the dawn of American history long enough. To them have been attributed not only the primitive culture of Central America and Mexico, but of lands far to the north, and even the earthworks of the Ohio Valley. It is time they were assigned their proper place, and that is among the purely fabulous creations of the imagination, among the giants and fairies, the gnomes and sylphs, and other such fancied beings which in all ages and nations the popular mind has loved to create. Toltec, Toltecatl, which in later days came to mean a skilled craftsman or artificer, signifies, as I have said, an inhabitant of Tollan—of the City of the Sun—in other words, a Child of Light. . . . In some, and these I consider the original versions of the myth, they do not constitute a nation at all, but are merely the disciples or servants of Quetzalcoatl. They have all the traits of beings of supernatural powers."—D. G. Brinton, *American Hero-Myths*, ch. 3, sect. 3.

A. D. 1325-1502.—The Aztec period.—The so called empire of Montezuma.—"The new era succeeding the Toltec rule is that of the Chichimec empire, which endured with some variations down to the coming of Cortés. The ordinary version of the early annals has it, that the Chichimecs, a wild tribe living far in the north-west, learning that the fertile regions of Central Mexico had been abandoned by the Toltecs, came down in immense hordes to occupy the land. . . . The name Chichimec at the time of the Spanish conquest, and subsequently, was used with two significations, first, as applied to the line of kings that reigned at Tezcuco, and second, to all the wild hunting tribes, particularly in the broad and little-known regions of the north. Traditionally or historically, the name has been applied to nearly every people men-

tioned in the ancient history of America. This has caused the greatest confusion among writers on the subject, a confusion which I believe can only be cleared up by the supposition that the name Chichimec, like that of Toltec, never was applied as a tribal or national designation proper to any people, while such people were living. It seems probable that among the Nahua peoples that occupied the country from the 6th to the 11th centuries, a few of the leading powers appropriated to themselves the title Toltecs, which had been at first employed by the inhabitants of Tollan, whose artistic excellence soon rendered it a designation of honor. To the other Nahua peoples, by whom these leading powers were surrounded, whose institutions were identical, but whose polish and elegance of manner were deemed by these self-constituted aristocrats somewhat inferior, the term Chichimecs, barbarians, etymologically 'dogs,' was applied. After the convulsions that overthrew Tollan, and reversed the condition of the Nahua nations, the 'dogs' in their turn assumed an air of superiority and retained their designation, Chichimecs, as a title of honor and nobility."—H. H. Bancroft, *Native Races of the Pacific States*, v. 2, ch. 2.—"We may suppose the 'Toltec period' in Mexican tradition to have been simply the period when the pueblo-town of Tollan was flourishing, and domineered most likely over neighbouring pueblos. One might thus speak of it as one would speak of the 'Theban period' in Greek history. After the 'Toltec period,' with perhaps an intervening 'Chichimec period' of confusion, came the 'Aztec period;' or, in other words, some time after Tollan lost its importance, the city of Mexico came to the front. Such, I suspect, is the slender historical residuum underlying the legend of a 'Toltec empire.' The Codex Ramirez assigns the year 1168 as the date of the abandonment of the Serpent Hill by the people of Tollan. We begin to leave this twilight of legend when we meet the Aztecs already encamped in the Valley of Mexico. Finding the most obviously eligible sites preoccupied, they were sagacious enough to detect the advantages of a certain marshy spot through which the outlets of lakes Chalco and Xochimilco, besides sundry rivulets, flowed northward and eastward into Lake Tezcuco. Here in the year 1325 they began to build their pueblo, which they called Tenochtitlan,—a name whereby hangs a tale. When the Aztecs, hard pressed by foes, took refuge among these marshes, they came upon a sacrificial stone which they recognized as one upon which some years before one of their priests had immolated a captive chief. From a crevice in this stone, where a little earth was imbedded, there grew a cactus, upon which sat an eagle holding in its beak a serpent. A priest ingeniously interpreted this symbolism as a prophecy of signal and long-continued victory, and forthwith diving into the lake he had an interview with Tlaloc, the god of waters, who told him that upon that very spot the people were to build their town. The place was therefore called Tenochtitlan, or 'place of the cactus-rock,' but the name under which it afterward came to be best known was taken from Mexitli, one of the names of the war-god Huitzilopochtli. The device of the rock and cactus, with the eagle and serpent, formed a tribal totem for the Aztecs, and has been adopted as the coat-of-

arms of the present Republic of Mexico. The pueblo of Tenochtitlan was surrounded by salt marshes, which by dint of dikes and causeways the Aztecs gradually converted into a large artificial lake, and thus made their pueblo by far the most defensible stronghold in Anahuac,—impregnable, indeed, so far as Indian modes of attack were concerned. The advantages of this commanding position were slowly but surely realized. A dangerous neighbour upon the western shore of the lake was the tribe of Tecpanecas, whose principal pueblo was Azcapotzalco. The Aztecs succeeded in making an alliance with these Tecpanecas, but it was upon unfavourable terms and involved the payment of tribute to Azcapotzalco. It gave the Aztecs, however, some time to develop their strength. Their military organization was gradually perfected, and in 1375 they elected their first tlacatecuhtli, or 'chief-of-men,' whom European writers, in the loose phraseology formerly current, called 'founder of the Mexican empire.' The name of this official was Acamapichtli, or 'Handful-of-Reeds.' During the eight-and-twenty years of his chieftancy the pueblo houses in Tenochtitlan began to be built very solidly of stone, and the irregular water-courses flowing between them were improved into canals. Some months after his death in 1403 his son Huitzilhuhtl, or 'Humming-bird,' was chosen to succeed him. This Huitzilhuhtl was succeeded in 1414 by his brother Chimalpopoca, or 'Smoking Shield,' under whom temporary calamity visited the Aztec town. The alliance with Azcapotzalco was broken, and that pueblo joined its forces to those of Tezcuco on the eastern shore of the lake. United they attacked the Aztecs, defeated them, and captured their chief-of-men, who died a prisoner in 1427. He was succeeded by Izcoatzin, or 'Obsidian Snake,' an aged chieftain who died in 1436. During these nine years a complete change came over the scene. Quarrels arose between Azcapotzalco and Tezcuco; the latter pueblo entered into alliance with Tenochtitlan, and together they overwhelmed and destroyed Azcapotzalco, and butchered most of its people. What was left of the conquered pueblo was made a slave mart for the Aztecs, and the remnant of the people were removed to the neighbouring pueblo of Tlacopan, which was made tributary to Mexico. By this great victory the Aztecs also acquired secure control of the springs upon Chapultepec, or 'Grasshopper Hill,' which furnished a steady supply of fresh water to their island pueblo. The next step was the formation of a partnership between the three pueblo towns, Tenochtitlan, Tezcuco, and Tlacopan, for the organized and systematic plunder of other pueblos. All the tribute or spoils extorted was to be divided into five parts, of which two parts each were for Tezcuco and Tenochtitlan, and one part for Tlacopan. The Aztec chief-of-men became military commander of the confederacy, which now began to extend operations to a distance. The next four chiefs-of-men were Montezuma, or 'Angry Chief,' the First, from 1436 to 1464; Axayacatl, or 'Face-in-the-Water,' from 1464 to 1477; Tizoc, or 'Wounded Leg,' from 1477 to 1486; and Ahuizotl, or 'Water-Rat,' from 1486 to 1502. Under these chiefs the great temple of Mexico was completed, and the aqueduct from Chapultepec was increased in capacity until it not only sup-

plied water for ordinary uses, but could also be made to maintain the level of the canals and the lake. In the driest seasons, therefore, Tenochtitlan remained safe from attack. Forth from this well-protected lair the Aztec warriors went on their errands of blood. Thirty or more pueblo towns, mostly between Tenochtitlan and the Gulf coast, scattered over an area about the size of Massachusetts, were made tributary to the Confederacy; and as all these communities spoke the Nahu language, this process of conquest, if it had not been cut short by the Spaniards, might in course of time have ended in the formation of a primitive kind of state. This tributary area formed but a very small portion of the country which we call Mexico. If the reader will just look at a map of the Republic of Mexico in a modern atlas, and observe that the states of Queretaro, Guanajuato, Michoacan, Guerrero, and a good part of La Puebla, lie outside the region sometimes absurdly styled 'Montezuma's Empire,' and surround three sides of it, he will begin to put himself into the proper state of mind for appreciating the history of Cortes and his companions. Into the outlying region just mentioned, occupied by tribes for the most part akin to the Nahuas in blood and speech, the warriors of the Confederacy sometimes ventured, with varying fortunes. They levied occasional tribute among the pueblos in these regions, but hardly made any of them regularly tributary. The longest range of their arms seems to have been to the eastward, where they sent their tax-gatherers along the coast into the isthmus of Tehuantepec, and came into conflict with the warlike Mayas and Quiches. . . . Such was, in general outline, what we may call the political situation in the time of the son of Axayacatl, the second Montezuma, who was elected chief-of-men in 1502, being then thirty-four years of age."

—J. Fiske, *The Discovery of America*, ch. 8 (v. 2).
A. D. 1517-1518.—First found by the Spaniards. See AMERICA: A. D. 1517-1518.

A. D. 1519 (February—April).—The coming of Cortés and the Spaniards.—Some time in the latter part of the year 1517, the Spaniards in Cuba had acquired definite knowledge of a much civilized people who inhabited "terra firma" to the west of them, by the return of Hernandez de Cordova from his involuntary voyage to Yucatan (see AMERICA: A. D. 1517-1518). In the spring of 1518 the Cuban governor, Velasquez, had enlarged that knowledge by sending an expedition under Grijalva to the Mexican coast, and, even before Grijalva returned, he had begun preparations for a more serious undertaking of conquest and occupation in the rich country newly found. For the command of this second armament he selected Hernando Cortés, one of the boldest and most ambitious of the adventurers who had helped to subdue and settle the island of Cuba. Before the fleet sailed, however, a jealous distrust of his lieutenant had become excited by some cause in the governor's mind, and he attempted to supersede him in the command. Cortes slipped out of port, half prepared as he was for the voyage, defied the orders of his superior, and made his way (February, 1519) to the scene of his future conquests, actually as a rebel against the authority which commissioned him. "The squadron of Cortés was composed of eleven small vessels. There were 110 sailors, 533 soldiers, of

which 13 were armed with muskets, and 32 with arquebuses, the others with swords and pikes only. There were 10 little field-pieces, and 16 horses. Such were the forces with which the bold adventurer set forth to conquer a vast empire, defended by large armies, not without courage, according to the report of Grijalva. But the companions of Cortés were unfamiliar with fear. Cortés followed the same route as Grijalva. . . . At the Tabasco River, which the Spanish called Rio de Grijalva, because that explorer had discovered it, they had a fight with some natives who resisted their approach. These natives fought bravely, but the fire-arms, and above all the horses, which they conceived to be of one piece with their riders, caused them extreme terror, and the rout was complete. . . . The native prince, overcome, sent gifts to the conqueror, and, without much knowing the extent of his agreement, acknowledged himself as vassal of the king of Spain, the most powerful monarch of the world." Meantime, tidings of a fresh appearance of the same strange race which had briefly visited the shores of the empire the year before were conveyed to Montezuma, and the king, who had sent envoys to the strangers before, but not quickly enough to find them, resolved to do so again. "The presents prepared for Grijalva, which had reached the shore too late, were, alas! all ready. To these were now added the ornaments used in the decoration of the image of Quetzalcoatl, on days of solemnity, regarded as the most sacred among all the possessions of the royal house of Mexico. Cortés accepted the rôle of Quetzalcoatl and allowed himself to be decorated with the ornaments belonging to that god without hesitation. The populace were convinced that it was their deity really returned to them. A feast was served to the envoys, with the accompaniment of some European wine which they found delicious. . . . During the feast native painters were busy depicting every thing they saw to be shown to their royal master. . . . Cortés sent to Montezuma a gilt helmet with the message that he hoped to see it back again filled with gold. . . . The bearer of this gift and communication, returning swiftly to the court, reported to the monarch that the intention of the stranger was to come at once to the capital of the empire. Montezuma at once assembled a new council of all his great vassals, some of whom urged the reception of Cortés, others his immediate dismissal. The latter view prevailed, and the monarch sent, with more presents to the unknown invader, benevolent but peremptory commands that he should go away immediately. . . . Meanwhile the Spanish camp was feasting and reposing in huts of cane, with fresh provisions, in great joy after the weariness of their voyage. They accepted with enthusiasm the presents of the emperor, but the treasures which were sent had an entirely different effect from that hoped for by Montezuma; they only inflamed the desire of the Spaniard to have all within his grasp, of which this was but a specimen. It was now that the great mistake in policy was apparent, by which the Aztec chieftain had for years been making enemies all over the country, invading surrounding states, and carrying off prisoners for a horrible death by sacrifice. These welcomed the strangers and encouraged their presence."—S. Hale, *The Story of Mexico*, ch. 13.

A. D. 1519 (June—October).—The advance of Cortés to Tlascalala.—"Meanwhile Cortés, by his craft, quieted a rising faction of the party of Velasquez which demanded to be led back to Cuba. He did this by seeming to acquiesce in the demand of his followers in laying the foundations of a town and constituting its people a municipality competent to choose a representative of the royal authority. This done, Cortés resigned his commission from Velasquez, and was at once invested with supreme power by the new municipality. The scheme which Velasquez had suspected was thus brought to fruition. Whoever resisted the new captain was conquered by force, persuasion, tact, or magnetism; and Cortés became as popular as he was irresistible. At this point messengers presented themselves from tribes not far off who were unwilling subjects of the Aztec power. The presence of possible allies was a propitious circumstance, and Cortés proceeded to cultivate the friendship of these tribes. He moved his camp day by day along the shore, inuring his men to marches, while the fleet sailed in company. They reached a large city [Cempoalla, or Zempoalla, the site of which has not been determined], and were regaled. Each chief told of the tyranny of Montezuma, and the eyes of Cortés glistened. The Spaniards went on to another town, slaves being provided to bear their burdens. Here they found tax-gatherers of Montezuma collecting tribute. Emboldened by Cortés' glance, his hosts seized the Aztec emissaries and delivered them to the Spaniards. Cortés now played a double game. He propitiated the servants of Montezuma by secretly releasing them, and added to his allies by enjoining every tribe he could reach to resist the Aztec collectors of tribute. The wandering municipality, as represented in this piratical army, at last stopped at a harbor where a town (La Villa Rica de Vera Cruz) sprang up, and became the base of future operations." At this point in his movements the adventurer despatched a vessel to Spain, with letters to the king, and with dazzling gifts of gold and Aztec fabrics. "Now came the famous resolve of Cortés. He would band his heterogeneous folk together—adherents of Cortés and of Velasquez—in one common cause and danger. So he adroitly led them to be partners in the deed which he stealthily planned. Hulk after hulk of the apparently worm-eaten vessels of the fleet sank in the harbor, until there was no flotilla left upon which any could desert him. The march to Mexico was now assured. The force with which to accomplish this consisted of about 450 Spaniards, six or seven light guns, fifteen horses, and a swarm of Indian slaves and attendants. A body of the Totonacs accompanied them. Two or three days brought them into the higher plain and its enlivening vegetation. When they reached the dependencies of Montezuma, they found orders had been given to extend to them every courtesy. They soon reached the Anahuac plateau, which reminded them not a little of Spain itself. They passed from cacique to cacique, some of whom groaned under the yoke of the Aztec; but not one dared do more than orders from Montezuma dictated. Then the invaders approached the territory of an independent

people, those of Tlascala, who had walled their country against neighboring enemies. A fight took place at the frontiers, in which the Spaniards lost two horses. They forced passes against great odds, but again lost a horse or two, — which was a perceptible diminution of their power to terrify. The accounts speak of immense hordes of the Tlascalans, which historians now take with allowances, great or small. Cortés spread what alarm he could by burning villages and capturing the country people. His greatest obstacle soon appeared in the compacted army of Tlascalans arrayed in his front. The conflict which ensued was for a while doubtful. Every horse was hurt, and 60 Spaniards were wounded; but the result was the retreat of the Tlascalans. Divining that the Spanish power was derived from the sun, the enemy planned a night attack; but Cortés suspected it, and assaulted them in their own ambush. Cortés now had an opportunity to display his double-facedness and his wiles. He received embassies both from Montezuma and from the senate of the Tlascalans. He cajoled each, and played off his friendship for the one in cementing an alliance with the other. But to Tlascala and Mexico he would go, so he told them. The Tlascalans were not averse, for they thought it boded no good to the Aztecs, if he could be bound to themselves. Montezuma dreaded the contact, and tried to intimidate the strangers by tales of the horrible difficulties of the journey. Presently the army took up its march for Tlascala, where they were royally received, and wives in abundance were bestowed upon the leaders. Next they passed to Cholula, which was subject to the Aztecs.”—J. Winsor, *Narrative and Critical Hist. of Am.*, v. 2, ch. 6.

A. D. 1519 (October).—The Massacre at Cholula.—The march to Mexico.—“The distance from Tlascala to Chololan [or Cholula] is but from 15 to 20 miles. It was a kind of holy place, venerated far and wide in Anahuac; pilgrimages were made thither, as the Mahometans go to Mecca, and Christians to Jerusalem or Rome. The city was consecrated to the worship of Quetzalcoatl, who had there the noblest temple in all Mexico, built, like all the temples in the country, on the summit of a truncated pyramid. The traveller of the present day beholds this pyramid on the horizon as he approaches Puebla, on his route from Vera Cruz to Mexico. But the worship of the beneficent Quetzalcoatl had been perverted by the sombre genius of the Aztecs. To this essentially good deity 6,000 human victims were annually immolated in his temple at Chololan. . . . The Spaniards found at Chololan an eager and, to all appearance at least, a perfectly cordial welcome.” But this hospitality masked, it is said, a great plot for their destruction, which Montezuma had inspired and to aid which he had sent into the neighborhood of the city a powerful Mexican army. The plot was revealed to Cortez — so the Spanish historians relate — and “he took his resolution with his accustomed energy and foresight. He made his dispositions for the very next day. He acquainted the caciques of Chololan that he should evacuate the city at break of dawn, and required them to furnish 2,000 porters or ‘tamanes,’ for the baggage. The caciques then organized their attack for the morrow morning, not without a promise of the men required, whom, in fact, they brought at dawn to the great court

in which the foreigners were domiciled. The conflict soon began. The Spaniards, who were perfectly prepared, commenced by massacring the caciques. The mass of Chololans that attempted to invade their quarters were crushed under the fire of their artillery and musketry, and the charges of their cavalry. Hearing the reports, the Tlascalans, who had been left at the entrance of the city, rushed on to the rescue. . . . They could now glut their hatred and vengeance; they slaughtered as long as they could, and then set to work at plunder. The Spaniards, too, after having killed all that resisted, betook themselves to pillage. The unfortunate city of Chololan was thus inundated with blood and sacked. Cortez, however, enjoined that the women and children should be spared, and we are assured that in that he was obeyed, even by his cruel auxiliaries from Tlascala. . . . To the praise of Cortez it must be said that, after the victory, he once more showed himself tolerant: he left the inhabitants at liberty to follow their old religion on condition that they should no longer immolate human victims. After this signal blow, all the threats, all the intrigues, of Montezuma, had no possible effect, and the Aztec emperor could be under no illusion as to the inflexible intention of Cortez. The latter, as soon as he had installed new chiefs at Chololan, and effaced the more hideous traces of the massacre and pillage that had desolated the city, set out with his own troops and his Indian auxiliaries from Tlascala for the capital of the Aztec empire, the magnificent city of Tenochtitlan.”—M. Chevalier, *Mexico, Ancient and Modern*, pt. 2, ch. 4 (v. 1).

The Capital of Montezuma as described by Cortés and Bernal Diaz.—“This Province is in the form of a circle, surrounded on all sides by lofty and rugged mountains; its level surface comprises an area of about 70 leagues in circumference, including two lakes, that overspread nearly the whole valley, being navigated by boats more than 50 leagues round. One of these lakes contains fresh, and the other, which is the larger of the two, salt water. On one side of the lakes, in the middle of the valley, a range of highlands divides them from one another, with the exception of a narrow strait which lies between the highlands and the lofty Sierras. This strait is a bow-shot wide, and connects the two lakes; and by this means a trade is carried on between the cities and other settlements on the lakes in canoes without the necessity of travelling by land. As the salt lake rises and falls with its tides like the sea, during the time of high water it pours into the other lake with the rapidity of a powerful stream; and on the other hand, when the tide has ebbed, the water runs from the fresh into the salt lake. This great city of Temixtitlan [Tenochtitlan—Mexico] is situated in this salt lake, and from the main land to the denser parts of it, by whichever route one chooses to enter, the distance is two leagues. There are four avenues or entrances to the city, all of which are formed by artificial causeways, two spears' length in width. The city is as large as Seville or Cordova; its streets, I speak of the principal ones, are very wide and straight; some of these, and all the inferior ones, are half land and half water, and are navigated by canoes. All the streets at intervals have openings, through which the water flows, crossing from one street

to another; and at these openings, some of which are very wide, there are also very wide bridges, composed of large pieces of timber, of great strength and well put together; on many of these bridges ten horses can go abreast. . . . This city has many public squares, in which are situated the markets and other places for buying and selling. There is one square twice as large as that of the city of Salamanca, surrounded by porticoes, where are daily assembled more than 60,000 souls, engaged in buying and selling; and where are found all kinds of merchandise that the world affords, embracing the necessities of life, as for instance articles of food, as well as jewels of gold and silver, lead, brass, copper, tin, precious stones, bones, shells, snails, and feathers. . . . Every kind of merchandise is sold in a particular street or quarter assigned to it exclusively, and thus the best order is preserved. They sell everything by number or measure; at least so far we have not observed them to sell any thing by weight. There is a building in the great square that is used as an audience house, where ten or twelve persons, who are magistrates, sit and decide all controversies that arise in the market, and order delinquents to be punished. . . . This great city contains a large number of temples, or houses for their idols, very handsome edifices, which are situated in the different districts and the suburbs. . . . Among these temples there is one which far surpasses all the rest, whose grandeur of architectural details no human tongue is able to describe; for within its precincts, surrounded by a lofty wall, there is room enough for a town of 500 families. Around the interior of this enclosure there are handsome edifices, containing large halls and corridors, in which the religious persons attached to the temple reside. There are full 40 towers, which are lofty and well built, the largest of which has 50 steps leading to its main body, and is higher than the tower of the principal church at Seville. The stone and wood of which they are constructed are so well wrought in every part that nothing could be better done. . . . This noble city contains many fine and magnificent houses; which may be accounted for from the fact that all the nobility of the country, who are the vassals of Montezuma, have houses in the city, in which they reside a certain part of the year; and, besides, there are numerous wealthy citizens who also possess fine houses."—II. Cortés, *Despatches [Letters]* (trans. by G. Folsom), letter 2, ch. 5.—"We had already been four days in the city of Mexico, and neither our commander nor any of us had, during that time, left our quarters, excepting to visit the gardens and buildings adjoining the palace. Cortes now, therefore, determined to view the city, and visit the great market, and the chief temple of Huitzilopochtli. . . . The moment we arrived in this immense market, we were perfectly astonished at the vast numbers of people, the profusion of merchandise which was there exposed for sale, and at the good police and order that reigned throughout. . . . Every species of goods which New Spain produces were here to be found; and everything put me in mind of my native town Medina del Campo during fair time, where every merchandise has a separate street assigned for its sale. . . . On quitting the market, we entered the spacious yards which surround the chief temple. . . . Motecusuma, who was sacrificing on the

top to his idols, sent six papas and two of his principal officers to conduct Cortes up the steps. There were 114 steps to the summit. . . . Indeed, this infernal temple, from its great height, commanded a view of the whole surrounding neighbourhood. From this place we could likewise see the three causeways which led into Mexico. . . . We also observed the aqueduct which ran from Chapultepec, and provided the whole town with sweet water. We could also distinctly see the bridges across the openings, by which these causeways were intersected, and through which the waters of the lake ebbed and flowed. The lake itself was crowded with canoes, which were bringing provisions, manufactures and other merchandise to the city. From here we also discovered that the only communication of the houses in this city, and of all the other towns built in the lake, was by means of drawbridges or canoes. In all these towns the beautiful white plastered temples rose above the smaller ones, like so many towers and castles in our Spanish towns, and this, it may be imagined, was a splendid sight."—Bernal Diaz del Castillo, *Memoirs* (trans. by Lockhart), ch. 92 (v. 1).

The same as viewed in the light of modern historical criticism.—"In the West India Islands the Spanish discoverers found small Indian tribes under the government of chiefs; but on the continent, in the Valley of Mexico, they found a confederacy of three Indian tribes under a more advanced but similar government. In the midst of the valley was a large pueblo, the largest in America, surrounded with water, approached by causeways; in fine, a water-girt fortress impregnable to Indian assault. This pueblo presented to the Spanish adventurers the extraordinary spectacle of an Indian society lying two ethnical periods back of European society, but with a government and plan of life at once intelligent, orderly, and complete. . . . The Spanish adventurers who captured the pueblo of Mexico saw a king in Montezuma, lords in Aztec chiefs, and a palace in the large joint-tenement house occupied, Indian fashion, by Montezuma and his fellow-householders. It was, perhaps, an unavoidable self-deception at the time, because they knew nothing of the Aztec social system. Unfortunately it inaugurated American aboriginal history upon a misconception of Indian life which has remained substantially unquestioned until recently. The first eye-witnesses gave the keynote to this history by introducing Montezuma as a king, occupying a palace of great extent crowded with retainers, and situated in the midst of a grand and populous city, over which, and much besides, he was reputed master. But king and kingdom were in time found too common to express all the glory and splendor the imagination was beginning to conceive of Aztec society; and emperor and empire gradually superseded the more humble conception of the conquerors. . . . To every author, from Cortes and Bernal Diaz to Brasseur de Bourbourg and Hubert H. Bancroft, Indian society was an unfathomable mystery, and their works have left it a mystery still. Ignorant of its structure and principles, and unable to comprehend its peculiarities, they invoked the imagination to supply whatever was necessary to fill out the picture. . . . Thus, in this case, we have a grand historical romance, strung upon the conquest of

Mexico as upon a thread; the acts of the Spaniards, the pueblo of Mexico, and its capture, are historical, while the descriptions of Indian society and government are imaginary and delusive. . . . There is a strong probability, from what is known of Indian life and society, that the house in which Montezuma lived, was a joint-tenement house of the aboriginal American model, owned by a large number of related families, and occupied by them in common as joint proprietors; that the dinner [of Montezuma, in his palace, as described by Cortes and Bernal Diaz] . . . was the usual single daily meal of a communal household, prepared in a common cook-house from common stores, and divided, Indian fashion, from the kettle; and that all the Spaniards found in Mexico was a simple confederacy of three Indian tribes, the counterpart of which was found in all parts of America. It may be premised further that the Spanish adventurers who thronged to the new world after its discovery found the same race of Red Indians in the West India Islands, in Central and South America, in Florida, and in Mexico. In their mode of life and means of subsistence, in their weapons, arts, usages, and customs, in their institutions, and in their mental and physical characteristics, they were the same people in different stages of advancement. No distinction of race was observed, and none in fact existed. . . . Not a vestige of the ancient pueblo of Mexico (Tenochtitlan) remains to assist us to a knowledge of its architecture. Its structures, which were useless to a people of European habits, were speedily destroyed to make room for a city adapted to the wants of a civilized race. We must seek for its characteristics in contemporary Indian houses which still remain in ruins, and in such of the early descriptions as have come down to us, and then leave the subject with but little accurate knowledge. Its situation, partly on dry land and partly in the waters of a shallow artificial pond formed by causeways and dikes, led to the formation of streets and squares, which were unusual in Indian pueblos, and gave to it a remarkable appearance. . . . Many of the houses were large, far beyond the supposable wants of a single Indian family. They were constructed of adobe brick and of stone, and plastered over in both cases with gypsum, which made them a brilliant white; and some were constructed of a red porous stone. In cutting and dressing this stone flint implements were used. The fact that the houses were plastered externally leads us to infer that they had not learned to dress stone and lay them in courses. It is not certainly established that they had learned the use of a mortar of lime and sand. In the final attack and capture, it is said that Cortes, in the course of seventeen days, destroyed and levelled three-quarters of the pueblo, which demonstrates the flimsy character of the masonry. . . . It is doubtful whether there was a single pueblo in North America, with the exception of Tlascala, Cholula, Tezcuco, and Mexico, which contained 10,000 inhabitants. There is no occasion to apply the term 'city' to any of them. None of the Spanish descriptions enable us to realize the exact form and structure of these houses, or their relations to each other in forming a pueblo. . . . It is evident from the citations made that the largest of these joint-tenement houses would accommodate from 500 to 1,000 or more people, living in the fashion of In-

dians; and that the courts were probably quadrangles, formed by constructing the building on three sides of an inclosed space, as in the New Mexican pueblos, or upon the four sides, as in the House of the Nuns, at Uxmal."—L. H. Morgan, *Houses and House-life of the Am. Aborigines* (*U. S. Geog. and Geol. Surv. of Rocky Mt. Reg.: Contrib. to N. Am. Ethnology*, v. 4), ch. 10.

A. D. 1519-1520.—Captivity of Montezuma, Cortés ruling in his name.—The discomfiture of Narvaez.—The revolt of the capital.—When Cortés had time to survey and to realize his position in the Mexican capital, he saw that it was full of extreme danger. To be isolated with so small a force in the midst of any hostile, populous city would be perilous; but in Mexico that peril was immeasurably increased by the peculiar situation and construction of the island-city—Venice-like in its insulation, and connected with the mainland by long and narrow causeways and bridges, easily broken and difficult to secure for retreat. With characteristic audacity, the Spanish leader mastered the danger of the situation, so to speak, by taking Montezuma himself in pledge for the peace and good behavior of his subjects. Commanded by Cortés to quit his palace, and to take up his residence with the Spaniards in their quarters, the Mexican monarch remonstrated but obeyed, and became from that day the shadow of a king. "During six months that Cortes remained in Mexico [from November, 1519, until May, 1520], the monarch continued in the Spanish quarters, with an appearance of as entire satisfaction and tranquillity as if he had resided there, not from constraint, but through choice. His ministers and officers attended him as usual. He took cognizance of all affairs; every order was issued in his name. . . . Such was the dread which both Montezuma and his subjects had of the Spaniards, or such the veneration in which they held them, that no attempt was made to deliver their sovereign from confinement, and though Cortes, relying on this ascendancy which he had acquired over their minds, permitted him not only to visit his temples, but to make hunting excursions beyond the lake, a guard of a few Spaniards carried with it such a terror as to intimidate the multitude, and secure the captive monarch. Thus, by the fortunate temerity of Cortes in seizing Montezuma, the Spaniards at once secured to themselves more extensive authority in the Mexican empire than it was possible to have acquired in a long course of time by open force; and they exercised more absolute sway in the name of another than they could have done in their own. . . . Cortes availed himself to the utmost of the powers which he possessed by being able to act in the name of Montezuma. He sent some Spaniards, whom he judged best qualified for such commissions, into different parts of the empire, accompanied by persons of distinction, whom Montezuma appointed to attend them both as guides and protectors. They visited most of the provinces, viewed their soil and productions, surveyed with particular care the districts which yielded gold or silver, pitched upon several places as proper stations for future colonies, and endeavoured to prepare the minds of the people for submitting to the Spanish yoke." At the same time, Cortes strengthened his footing in the capital by building and launching two brigantines on the lake, with an equipment and

armament which his royal prisoner caused to be brought up for him from Vera Cruz. He also persuaded Montezuma to acknowledge himself a vassal of the King of Castile, and to subject his kingdom to the payment of an annual tribute. But, while his cunning conquest of an empire was advancing thus prosperously, the astute Spanish captain allowed his prudence to be over-ridden by his religious zeal. Becoming impatient at the obstinacy with which Montezuma clung to his false gods, Cortes made a rash attempt, with his soldiers, to cast down the idols in the great temple of the city, and to set the image of the Virgin in their place. The sacrilegious outrage roused the Mexicans from their tame submission and fired them with an inextinguishable rage. At this most unfortunate juncture, news came from Vera Cruz which demanded the personal presence of Cortes on the coast. Velasquez, the hostile governor of Cuba, to whom the adventurer in Mexico was a rebel, had sent, at last, an expedition, to put a stop to his unauthorized proceedings and to arrest his person. Cortes faced the new menace as boldly as he had faced all others. Leaving 150 men in the angry Mexican capital, under Pedro de Alvarado, he set out with the small remainder of his force to attack the Spanish intruders. Even after picking up some detachments outside and joining the garrison at Vera Cruz, he could muster but 250 men; while Narvaez, who commanded the expedition from Cuba, had brought 800 foot soldiers and 80 horse, with twelve pieces of cannon. The latter had taken possession of the city of Zempoalla and was strongly posted in one of its temples. There Cortes surprised him, in a night attack, took him prisoner, in a wounded state, and compelled his troops to lay down their arms. Nearly the whole of the latter were soon captivated by the commanding genius of the man they had been sent to arrest, and enlisted in his service. He found himself now at the head of a thousand well armed men; and he found in the same moment that he needed them all. For news came from Mexico that Alvarado, thinking to anticipate and crush a suspected intention of the Mexicans to rise against him, had provoked the revolt and made it desperate by a most perfidious, brutal massacre of several hundred of the chief persons of the empire, committed while they were celebrating one of the festivals of their religion, in the temple. The Spaniards at Mexico were now beleaguered, as the consequence, in their quarters, and their only hope was the hope that Cortes would make haste to their rescue,—which he did.—W. Robertson, *Hist. of America*, bk. 5 (v. 2).

A. D. 1520 (June-July).—The return of Cortés to the Mexican Capital.—The battle in the city.—The death of Montezuma.—The disastrous Retreat of the Spaniards.—The alarming intelligence which came to him from the Mexican capital called out in Cortés the whole energy of his nature. Hastily summoning back the various expeditions he had already sent out, and gathering all his forces together, he “reviewed his men, and found that they amounted to 1,300 soldiers, among whom were 96 horsemen, 80 cross-bowmen, and about 80 musketeers. Cortez marched with great strides to Mexico, and entered the city at the head of

this formidable force on the 24th of June, 1520, the day of John the Baptist. Very different was the reception of Cortez on this occasion from that on his first entry into Mexico, when Montezuma had gone forth with all pomp to meet him. Now, the Indians stood silently in the doorways of their houses, and the bridges between the houses were taken up. Even when he arrived at his own quarters he found the gates barred, so strict had been the siege, and he had to demand an entry.” The Mexicans, strangely enough, made no attempt to oppose his entrance into the city and his junction with Alvarado; yet the day after his return their attack upon the Spanish quarters, now so strongly reinforced, was renewed. “Cortez, who was not at all given to exaggeration, says that neither the streets nor the terraced roofs (‘azoteas’) were visible, being entirely obscured by the people who were upon them; that the multitude of stones was so great that it seemed as if it rained stones; and that the arrows came so thickly that the walls and the courts were full of them, rendering it difficult to move about. Cortez made two or three desperate sallies, and was wounded. The Mexicans succeeded in setting fire to the fortress, which was with difficulty subdued, and they would have scaled the walls at the point where the fire had done most damage but for a large force of cross-bowmen, musketeers, and artillery, which Cortez threw forward to meet the danger. The Mexicans at last drew back, leaving no fewer than 80 Spaniards wounded in this first encounter. The ensuing morning, as soon as it was daylight, the attack was renewed. . . . Again, and with considerable success, Cortez made sallies from the fortress in the course of the day; but at the end of it there were about 60 more of his men to be added to the list of wounded, already large, from the injuries received on the preceding day. The third day was devoted by the ingenious Cortez to making three movable fortresses, called ‘mantas,’ which, he thought, would enable his men, with less danger, to contend against the Mexicans upon their terraced roofs. . . . It was on this day that the unfortunate Montezuma, either at the request of Cortez, or of his own accord, came out upon a battlement and addressed the people.” He was interrupted by a shower of stones and arrows and received wounds from which he died soon after. The fighting on this day was more desperate than it had been before. The Spaniards undertook to dislodge a body of the Indians who had posted themselves on the summit of the great temple, which was dangerously near at hand. Again and again they were driven back, until Cortez bound his shield to his wounded arm and led the assault. Then, after three hours of fighting, from terrace to terrace, they gained the upper platform and put every Mexican to the sword. But 40 Spaniards perished in the struggle. “This fight in the temple gave a momentary brightness to the arms of the Spaniards and afforded Cortez an opportunity to resume negotiations. But the determination of the Mexicans was fixed and complete. . . . They would all perish, if that were needful, to gain their point of destroying the Spaniards. They bade Cortez look at the streets, the squares, and the terraces, covered with people; and then, in a business-like and calculating manner, they told him that if 25,000 of them were to die for each

Spaniard, still the Spaniards would perish first. . . . It generally requires at least as much courage to retreat as to advance. Indeed, few men have the courage and the ready wisdom to retreat in time. But Cortez, once convinced that his position in Mexico was no longer tenable, wasted no time or energy in parleying with danger. Terror had lost its influence with the Mexicans, and superior strategy was of little avail against such overpowering numbers. . . . Cortez resolved to quit the city that night [July 1, 1520]. . . . A little before midnight the stealthy march began. The Spaniards succeeded in laying down the pontoon over the first bridge-way, and the vanguard with Sandoval passed over; but, while the rest were passing, the Mexicans gave the alarm with loud shouts and blowing of horns. . . . Almost immediately upon this alarm the lake was covered with canoes. It rained, and the misfortunes of the night commenced by two horses slipping from the pontoon into the water. Then the Mexicans attacked the pontoon-bearers so furiously that it was impossible for them to raise it up again." After that, all seems to have been a confused struggle in the darkness, where even Cortez could do little for the unfortunate rear-guard of his troops. "This memorable night has ever been celebrated in American history as 'la noche triste.' In this flight from Mexico all the artillery was lost, and there perished 450 Spaniards, . . . 4,000 of the Indian allies, 46 horses, and most of the Mexican prisoners, including one son and two daughters of Montezuma, and his nephew the King of Tezcoco. A loss which posterity will ever regret was that of the books and accounts, memorials and writings, of which there were some, it is said, that contained a narrative of all that had happened since Cortez left Cuba. . . . In the annals of retreats there has seldom been one recorded which proved more entirely disastrous."—Sir A. Helps, *Spanish Conquest in America*, bk. 10, ch. 7-8 (v. 2).

A. D. 1520-1521.—The retreat to Tlascal.—Reinforcements and recovery.—Cortés in the field again.—Preparations to attack Mexico.—"After the disasters and fatigues of the 'noche triste,' the melancholy and broken band of Cortez rested for a day at Tacuba, whilst the Mexicans returned to their capital, probably to bury the dead and purify their city. It is singular, yet it is certain, that they did not follow up their successes by a death blow at the disarmed Spaniards. But this momentary paralysis of their efforts was not to be trusted, and accordingly Cortez began to retreat eastwardly, under the guidance of the Tascalans, by a circuitous route around the northern limits of lake Zumpango. The flying forces and their auxiliaries were soon in a famishing condition, subsisting alone on corn or on wild cherries gathered in the forest, with occasional refreshment and support from the carcase of a horse that perished by the way. For six days these fragments of the Spanish army continued their weary pilgrimage, and, on the seventh, reached Otumba." At Otumba their progress was barred by a vast army of the Aztecs, which had marched by a shorter road to intercept them; but after a desperate battle the natives fled and the Spaniards were troubled no more until they reached the friendly shelter of Tlascal. The Tascalans held faithfully to their alliance

and received the flying strangers with helpful hands and encouraging words. But many of Cortez' men demanded permission to continue their retreat to Vera Cruz. "Just at this moment, too, Cuitlahua, who mounted the throne of Mexico on the death of Montezuma, despatched a mission to the Tascalans, proposing to bury the hatchet, and to unite in sweeping the Spaniards from the realm." A hot discussion ensued in the council of the Tascalan chiefs, which resulted in the rejection of the Mexican proposal, and the confidence of Cortez was restored. He succeeded in pacifying his men, and gave them employment by expeditions against tribes and towns within reach which adhered to the Mexican king. After some time he obtained reinforcements, by an arrival of vessels at Vera Cruz bringing men and supplies, and he began to make serious preparations for the reconquest of the Aztec capital. He "constructed new arms and caused old ones to be repaired; made powder with sulphur obtained from the volcano of Popocatepetl; and, under the direction of his builder, Lopez, prepared the timber for brigantines, which he designed to carry, in pieces, and launch on the lake at the town of Tezcoco. At that port, he resolved to prepare himself fully for the final attack, and, this time, he determined to assault the enemy's capital by water as well as by land." The last day of December found him once more on the shores of the Mexican lake, encamped at Tezcoco, with a Spanish force restored to 600 men in strength, having 40 horses, 80 arquebuses and nine small cannon. Of Indian allies he is said to have had many thousands. Meantime, Cuitlahua had died of smallpox—which came to the country with the Spaniards—and had been succeeded by Guatemozin, his nephew, a vigorous young man of twenty-five. "At Tezcoco, Cortez was firmly planted on the eastern edge of the valley of Mexico, in full sight of the capital which lay across the lake, near its western shore, at the distance of about twelve miles. Behind him, towards the sea-coast, he commanded the country, . . . while, by passes through lower spurs of the mountains, he might easily communicate with the valleys of which the Tascalans and Cholulans were masters." One by one he reduced and destroyed or occupied the neighboring towns, and overran the surrounding country, in expeditions which made the complete circle of the valley and gave him a complete knowledge of it, while they re-established the prestige of the Spaniards and the terror of their arms. On the 28th of April the newly built brigantines, 12 in number, were launched upon the lake, and all was in readiness for an attack upon the city, with forces now increased by fresh arrivals to 87 horse and 818 Spanish infantry, with three iron field pieces and 15 brass falconets.—B. Mayer, *Mexico, Aztec, Spanish and Republican*, bk. 1, ch. 6-8 (v. 1).

A. D. 1521 (May-July).—The siege of the Aztec capital begun.—"The observations which Cortez had made in his late tour of reconnaissance had determined him to begin the siege by distributing his forces into three separate camps, which he proposed to establish at the extremities of the principal causeways," under three of his captains, Alvarado, Olid and Sandoval. The movement of forces from Tezcoco began on the 10th of May, 1521. Alvarado and Olid occupied

Tacuba, cut the aqueduct which conveyed water from Chapoltepec to the capital, and made an unsuccessful attempt to get possession of the fatal causeway of "the noche triste." Holding Tacuba, however, Alvarado commanded that important passage, while Sandoval, seizing the city of Iztapalapan, at the southern extremity of the lake, and Olid, establishing himself near the latter, at Cojohuacan, were planted at the two outlets, it would seem, of another of the causeways, which branched to attain the shore at those two points. When so much had been accomplished, Cortés, in person, set sail with his fleet of brigantines and speedily cleared the lake of all the swarm of light canoes and little vessels with which the unfortunate Mexicans tried vainly though valorously to dispute it with him. "This victory, more complete than even the sanguine temper of Cortés had prognosticated, proved the superiority of the Spaniards, and left them, henceforth, undisputed masters of the Aztec sea. It was nearly dusk when the squadron, coasting along the great southern causeway, anchored off the point of junction, called Xoloc, where the branch from Cojohuacan meets the principal dike. The avenue widened at this point, so as to afford room for two towers, or turreted temples, built of stone, and surrounded by walls of the same material, which presented altogether a position of some strength, and, at the present moment, was garrisoned by a body of Aztecs. They were not numerous; and Cortés, landing with his soldiers, succeeded without much difficulty in dislodging the enemy, and in getting possession of the works." Here, in a most advantageous position on the great causeway, the Spanish commander fortified himself and established his headquarters, summoning Olid with half of his force to join him and transferring Sandoval to Olid's post at Cojohuacan. "The two principal avenues to Mexico, those on the south and the west, were now occupied by the Christians. There still remained a third, the great dike of Tepejacac, on the north, which, indeed, taking up the principal street, that passed in a direct line through the heart of the city, might be regarded as a continuation of the dike of Iztapalapan. By this northern route a means of escape was still left open to the besieged, and they availed themselves of it, at present, to maintain their communications with the country, and to supply themselves with provisions. Alvarado, who observed this from his station at Tacuba, advised his commander of it, and the latter instructed Sandoval to take up his position on the causeway. That officer, though suffering at the time from a severe wound, . . . hastened to obey; and thus, by shutting up its only communication with the surrounding country, completed the blockade of the capital. But Cortés was not content to wait patiently the effects of a dilatory blockade." He arranged with his subordinate captains the plan of a simultaneous advance along each of the causeways toward the city. From his own post he pushed forward with great success, assisted by the brigantines which sailed along side, and which, by the flanking fire of their artillery, drove the Aztecs from one barricade after another, which they had erected at every dismantled bridge. Fighting their way steadily, the Spaniards traversed the whole length of the dike and entered the city; penetrated to the great square; saw once more their

old quarters; scaled again the sides of the pyramid-temple, to slay the bloody priests and to strip the idols of their jewels and gold. But the Aztecs were frenzied by this sacrilege, as they had been frenzied by the same deed before, and renewed the battle with so much fury that the Spaniards were driven back in thorough panic and disarray. "All seemed to be lost;—when suddenly sounds were heard in an adjoining street, like the distant tramp of horses galloping rapidly over the pavement. They drew nearer and nearer, and a body of cavalry soon emerged on the great square. Though but a handful in number, they plunged boldly into the thick of the enemy," who speedily broke and fled, enabling Cortés to withdraw his troops in safety. Neither Alvarado nor Sandoval, who had greater difficulties to overcome, and who had no help from the brigantines, reached the suburbs of the city; but their assault had been vigorously made, and had been of great help to that of Cortés. The success of the demonstration spread consternation among the Mexicans and their vassals, and brought a number of the latter over to the Spanish side. Among these latter was the prince of Tezcucoc, who joined Cortés, with a large force, in the next assault which the latter made presently upon the city. Again penetrating to the great square, the Spaniards on this occasion destroyed the palaces there by fire. But the spirit of the Mexicans remained unbroken, and they were found in every encounter opposing as obstinate a resistance as ever. They contrived, too, for a remarkable length of time, to run the blockade of the brigantines on the lake and to bring supplies into the city by their canoes. But, at length, when most of the great towns of the neighborhood had deserted their cause, the supplies failed and starvation began to do its work in the fated city. At the same time, the Spaniards were amply provisioned, and their new allies built barracks and huts for their shelter. Cortés "would gladly have spared the town and its inhabitants. . . . He intimated more than once, by means of the prisoners whom he released, his willingness to grant them fair terms of capitulation. Day after day, he fully expected his proffers would be accepted. But day after day he was disappointed. He had yet to learn how tenacious was the memory of the Aztecs."—W. H. Prescott, *Hist. of the Conq. of Mexico*, bk. 6, ch. 4-5.

A. D. 1521 (July).—Disastrous repulse of the Spaniards.—"The impatience of the soldiers grew to a great height, and was supported in an official quarter—by no less a person than Alderete, the king's treasurer. Cortez gave way, against his own judgment, to their importunities" and another general attack was ordered. "On the appointed day Cortez moved from his camp, supported by seven brigantines, and by more than 3,000 canoes filled with his Indian allies. When his soldiers reached the entrance of the city, he divided them in the following manner. There were three streets which led to the market-place from the position which the Spaniards had already gained. Along the principal street, the king's treasurer, with 70 Spaniards and 15,000 or 20,000 allies, was to make his way. His rear was to be protected by a small guard of horsemen. The other two streets were smaller, and led from the street of Tlacuba to the market-place. Along the broader of these

two streets Cortez sent two of his principal captains, with 80 Spaniards and 10,000 Indians; he himself, with eight horsemen, 75 foot-soldiers, 25 musketeers, and an 'infinite number' of allies, was to enter the narrower street. At the entrance to the street of Tlacuba he left two large cannon, with eight horsemen to guard them, and at the entrance of his own street he also left eight horsemen to protect the rear. . . . The Spaniards and their allies made their entrance into the city with even more success and less embarrassment than on previous occasions. Bridges and barricades were gained, and the three main bodies of the army moved forward into the heart of the city." But in the excitement of their advance they left unrepaid behind them a great breach in the causeway, ten or twelve paces wide, although Cortez had repeatedly enjoined upon his captains that no such dangerous death-trap should be left to catch them in the event of a retreat. The neglect in this case was most disastrous. Being presently repulsed and driven back, the division which had allowed this chasm to yawn behind it was engulfed. Cortez, whose distrust had been excited in some way, discovered the danger, but too late. He made his way to the spot, only to find "the whole aperture so full of Spaniards and Indians that, as he says, there was not room for a straw to float upon the surface of the water. The peril was so imminent that Cortez not only thought that the Conquest of Mexico was gone, but that the term of his life as well as of his victories had come, and he resolved to die there fighting. All that he could do at first was to help his men out of the water; and, meanwhile, the Mexicans charged upon them in such numbers that he and his little party were entirely surrounded. The enemy seized upon his person, and would have carried him off but for the resolute bravery of some of his guard, one of whom lost his life there in succouring his master. . . . At last he and a few of his men succeeded in fighting their way to the broad street of Tlacuba, where, like a brave captain, instead of continuing his flight, he and the few horsemen who were with him turned round and formed a rear guard to protect his retreating troops. He also sent immediate orders to the king's treasurer and the other commanders to make good their retreat."—Sir A. Helps, *The Spanish Conquest in America*, bk. 11, ch. 1 (v. 2).—"As we were thus retreating, we continually heard the large drum beating from the summit of the chief temple of the city. Its tone was mournful indeed, and sounded like the very instrument of Satan. This drum was so vast in its dimensions that it could be heard from eight to twelve miles distance. Every time we heard its mournful sound, the Mexicans, as we subsequently learnt, offered to their idols the bleeding hearts of our unfortunate countrymen. . . . After we had at last, with excessive toil, crossed a deep opening, and had arrived at our encampment, . . . the large drum of Huitzilopochtli again resounded from the summit of the temple, accompanied by all the hellish music of shell trumpets, horns, and other instruments. . . . We could plainly see the platform, with the chapel in which those cursed idols stood; how the Mexicans had adorned the heads of the Spaniards with feathers, and compelled their victims to dance round the god Huitzilopochtli; we saw how they stretched

them out at full length on a large stone, ripped open their breasts with flint knives, tore out the palpitating heart and offered it to their idols. Alas! we were forced to be spectators of all this, and how they then seized hold of the dead bodies by the legs and threw them headlong down the steps of the temple, at the bottom of which other executioners stood ready to receive them, who severed the arms, legs, and heads from the bodies, drew the skin off the faces, which were tanned with the beads still adhering to them, and produced as spectacles of mockery and derision at their feasts; the legs, arms, and other parts of the body being cut up and devoured. . . . On that terrible day the loss of the three divisions amounted to 60 men and 7 horses."—Bernal Diaz del Castillo, *Memoirs*, ch. 152 (v. 2).

A. D. 1521 (August).—The last days of the Siege.—The taking of the ruined city.—The end of the Aztec dominion.—"Guatemozin's victory diffused immense enthusiasm among the Aztecs and those who remained united to them. The priests proclaimed that the gods, satiated by the sacrifice of the Spanish prisoners, had promised to rid the country of the foreigners, and that the promise would be fulfilled within eight days. This intelligence spread alarm among the allies of the Spaniards. They deserted in great numbers—not to go over to the Aztecs, whose anger they dreaded, but to return to their homes. Cortez had good watch kept in the camp. The sorties of the besieged were repulsed; the eight days passed without the Spaniards having lost more than a few marauders. The allies, seeing that the oracle was wrong, came back to their former friends. The aggressive ardour of the besieged grew cooler, and they soon found themselves assailed by the plagues that ordinarily attack troops massed in a city—not only famine, but epidemic diseases, the result of want and overcrowding. . . . Famine pinched them more cruelly day after day. Lizards and such rats as they could find were their richest nourishment; reptiles and insects were eagerly looked for, trees stripped of their bark, and roots stealthily sought after by night. Meanwhile, Cortez, seeing that there was no other means of bringing them to submission, pursued the work of destruction he had resolved on with so much regret. . . . Heaps of bodies were found in every street that was won from them; this people, so punctilious in their customs of sepulture, had ceased to bury their dead. . . . Soon there was left to the besieged but one quarter, and that the most incommodious of all, forming barely an eighth of the city, where there were not houses enough to give them shelter. . . . The 13th August, 1521, had now arrived, and that was to be the last day of this once flourishing empire. Before making a final assault, Cortez once more invited the emperor to his presence. His envoys came back with the 'cihuacoatl,' a magistrate of the first rank, who declared, with an air of consternation, that Guatemozin knew how to die, but that he would not come to treat. Then, turning towards Cortez, he added: 'Do now whatever you please.' 'Be it so,' replied Cortez; 'go and tell your friends to prepare; they are going to die.' In fact, the troops advanced; there was a last mêlée, a last carnage, on land and on the lake. . . . Guatemozin, driven to the shore of the

lake, threw himself into a canoe with a few warriors, and endeavoured to escape by diut of rowing; but he was pursued by a brigantine of the Spanish fleet, taken and brought to Cortez, who received him with the respect due to a crowned head. . . . The Aztec empire had ceased to exist; Spanish sway was established in Mexico. The Cross was triumphant in that fine country, and there was no sharer in its reign. The number of persons that perished in the siege has been differently estimated. The most moderate calculation puts it at 120,000 on the side of the Aztecs. Very many Indians fell on the side of the besiegers. The historian Ixtlixochitl says there were 30,000 dead of the warriors of Tezcuco alone. All that were left alive of the Aztecs were, at the request of Guatemozin, allowed to leave the city in freedom, on the morning after it was taken. . . . They dispersed in all directions, everywhere spreading a terror of the Spaniards, and the feeling that to resist them was impossible. That conviction must have been established speedily and firmly, for there was no further attempt at resistance, unless it were at one point, in the territory of Panuco, near the Atlantic Ocean."—M. Chevalier, *Mexico, Ancient and Modern*, pt. 2, ch. 8-9 (v. 1).

A. D. 1521-1524.—The rebuilding of the capital.—The completion and settlement of the Conquest.—"The first ebullition of triumph was succeeded in the army by very different feelings, as they beheld the scanty spoil gleaned from the conquered city;" and Cortés was driven, by the clamors and suspicions of his soldiers, to subject his heroic captive, Guatemozin, to torture, in the hope of wringing from him a disclosure of some concealment of his imagined treasures. Its only result was to add another infamy to the name and memory of the conquerors. "The commander-in-chief, with his little band of Spaniards, now daily recruited by reinforcements from the Islands, still occupied the quarters of Cojohuacan, which they had taken up at the termination of the siege. Cortés did not immediately decide in what quarter of the Valley to establish the new capital which was to take the place of the ancient Tenochtitlan. . . . At length he decided on retaining the site of the ancient city, . . . and he made preparations for the reconstruction of the capital on a scale of magnificence which should, in his own language, 'raise her to the rank of Queen of the surrounding provinces, in the same manner as she had been of yore.' The labor was to be performed by the Indian population, drawn from all quarters of the Valley, and including the Mexicans themselves, great numbers of whom still lingered in the neighborhood of their ancient residence. . . . In less than four years from the destruction of Mexico, a new city had risen on its ruins, which, if inferior to the ancient capital in extent, surpassed it in magnificence and strength. It occupied so exactly the same site as its predecessor that the 'plaza mayor,' or great square, was the same spot which had been covered by the huge 'teocalli' and the palace of Montezuma; while the principal streets took their departure as before from this central point, and, passing through the whole length of the city, terminated at the principal causeways. Great alterations, however, took place in the fashion of the archi-

itecture." Meantime, Cortés had been brought into much danger at the Spanish court, by the machinations of his enemies, encouraged by Bishop Fonseca, the same minister who pursued Columbus with hostility. His friends in Spain rallied, however, to his support, and the result of an investigation, undertaken by a board to which the Emperor Charles V. referred all the charges against him, was the confirmation of his acts in Mexico to their full extent. "He was constituted Governor, Captain-General, and Chief Justice of New Spain, with power to appoint to all offices, civil and military, and to order any person to leave the country whose residence there he might deem prejudicial to the interests of the Crown. This judgment of the council was ratified by Charles V., and the commission investing Cortés with these ample powers was signed by the emperor at Valladolid, October 15th, 1522. . . . The attention of Cortés was not confined to the capital. He was careful to establish settlements in every part of the country which afforded a favourable position for them. . . . While thus occupied with the internal economy of the country, Cortés was still bent on his great schemes of discovery and conquest." He fitted out a fleet to explore the shores of the Pacific, and another in the Gulf of Mexico—the prime object of both being the discovery of some strait that would open one ocean to the other. He also sent Olid in command of an expedition by sea to occupy and colonize Honduras, and Alvarado, by land, at the head of a large force, to subdue Guatemala. The former, having partly accomplished his mission, attempted to establish for himself an independent jurisdiction, and his conduct induced Cortés to proceed to Honduras in person. It was in the course of this expedition that Guatemozin, the dethroned Mexican chief, who had been forced to accompany his conqueror, was accused of a plot against the Spaniards and was hung to a tree. We have the testimony of Bernal Diaz, one of the Spaniards on the spot, that the execution "was most unjust, and was thought wrong by all of us." "Within three short years after the Conquest [Cortés] had reduced under the dominion of Castile an extent of country more than 400 leagues in length, as he affirms, on the Atlantic coast, and more than 500 on the Pacific; and, with the exception of a few interior provinces of no great importance, had brought them to a condition of entire tranquillity."—W. H. Prescott, *Hist. of the Conquest of Mexico*, bk. 7, ch. 1-3.

A. D. 1535-1540.—Introduction of Printing. See PRINTING, &c.; A. D. 1535-1709.

A. D. 1535-1822.—Under the Spanish viceroys.—"Antonio de Mendoza, Conde de Tendilla, was the first viceroy sent by Charles V. to New Spain. He arrived in the autumn of 1535. . . . He had a well-balanced and moderate character, and governed the country with justice and generosity combined. He . . . set himself to reform the abuses which had already appeared, protected the Indians from the humiliations which the newly arrived Spaniards were disposed to put upon them; he stimulated all branches of agriculture, and finding the natives were already well informed in the cultivation of land, he encouraged them in this pursuit by all possible

efforts. . . . To the religious orders in Mexico is due in great measure the firm base upon which the government of Spain was established there. The new viceroy fully recognized this, and encouraged the foundations of colleges and schools already undertaken by them. In every way he promoted the prosperity and growth of the country, and had the satisfaction in the course of his government, which lasted 15 years, to see everything bear the marks of his judgment and enterprise. It was he who founded two cities [Guadalajara and Valladolid] which have reached great importance. . . . Cortés was away when the Viceroy Mendoza arrived in Mexico. He still retained his title as governor, with the same powers always conferred upon him; but his long absences from the capital made it necessary, as he fully recognized, that some other strong authority should be established there. Nevertheless, he never got on very well with such other authorities, and on his return soon became at odds with Mendoza, who, in his opinion, interfered with his prerogatives. It was then that Cortés bade farewell to his family, and taking with him his eldest son and heir, Don Martin, then eight years old, he embarked for Spain, leaving Mendoza undisturbed in the execution of his office. . . . In 1536 was issued the first book printed in Mexico, on a press imported by Mendoza, and put into the hands of one Juan Pablos. . . . In 1550 this good ruler [Mendoza] sailed away from Mexico. . . . He passed on to take charge of the government of Peru, by a practice which came to be quite common—a sort of diplomatic succession by which the viceroys of New Spain were promoted to the post at Peru. Don Luis de Velasco, second viceroy of New Spain, made his entrance into the capital with great pomp, at the end of the year 1550. He, like his predecessor, had been selected with care by the orders of Charles V. . . . His first decree was one liberating 150 Indians from slavery, who were working chiefly in the mines. . . . He established in Mexico, for the security of travellers upon the highway, the tribunal of the Holy Brotherhood, instituted in Spain for the same purpose in the time of Isabella. He founded the Royal University of Mexico, and the Royal Hospital for the exclusive use of the natives. . . . The good Viceroy Velasco died in 1564, having governed the country for 14 years. . . . During the government of this ruler and his predecessor all the administration of New Spain, political, civil, and religious was established upon so firm a foundation that it could go on in daily action like a well regulated machine." In the meantime, Charles V. had resigned the burden of his great sovereignty, transferring all his crowns to his narrow-souled son, Philip II., who cared nothing for the New World except as a source of gold and silver supply and a field for religious bigotry. Under Philip "the character of the viceroys was lowered from the high standard adhered to when Charles the Emperor selected them himself. To follow the long list of them would be most tedious and useless, as they passed in rotation, governing according to the best of their lights for several years in Mexico, and then passing on, either by death or by promotion to Peru. In 1571 the Inquisition was fully established . . . and the next year the Jesuits arrived. . . . The first 'auto-da-fé' was celebrated in the year 1574, when, as its chroni-

cler mentions cheerfully, 'there perished 21 pestilent Lutherans.' From this time such ceremonies were of frequent occurrence, but the Inquisition never reached the point it did in Old Spain. . . . The viceroys of New Spain under Philip III. [1578-1621] were, for the most part, men of judgment and moderation. While the government at home, in the hands of profligate favorites, was growing weaker and weaker, that of Mexico was becoming more firmly established." It was not shaken nor disturbed by the War of the Spanish Succession, during the early years of the eighteenth century; but the Revolution in France, which convulsed Europe before that century closed, wrought changes which were lasting in the New World as well as the Old. "There were in all 64 viceroys, beginning with Don Antonio de Mendoza, 1535, and ending with Juan O'Donoju in 1822."—S. Hale, *The Story of Mexico*, ch. 20-22.

A. D. 1810-1819.—The first Revolutionary movement.—Hidalgo.—Allende.—Morelos.—"The causes of the coming revolution were not hidden. The law that excluded Spaniards born in America from equal rights with those who were immigrants was a natural, not to say necessary, source of discontent among people whose good-will was much needed by any viceroy. There was inevitably not a little mutual repugnance between the Mexican and Spanish stocks, and the home government did nothing to mollify such asperities. There were commercial monopolies militant against public interests. The clergy were alienated, and since they were not thus so serviceable as formerly in the part of mediators in enforcing governmental aims, it was found necessary to use force where the people were not accustomed to it. The Viceroy José de Iturrigaray practised a seeming condescension that deceived no one, and he pursued his exactions partly by reason of self-interest, and partly in order to supply Madrid with means to meet the financial troubles that the Napoleonic era was creating. After some years of these conditions in New Spain, a conspiracy, resulting from a reaction, sent the viceroy back to Spain a prisoner. This gave strength to revolutionary sentiments, and a few trials for treason increased the discontent. The men who were now put successively in the vice-regal place had few qualities for the times, and a certain timidity of policy was not conducive to strength of government. . . . The outbreak, when it came, brought to the front a curate of Dolores, a native priest, Miguel Hidalgo, who commanded the confidence of the disaffected, and was relied upon to guide the priesthood. Ignacio de Allende had some of the soldierly qualities needed for a generalissimo. The purpose of these men and their allies, before they should openly proclaim a revolt, was to seize some of the leading Spaniards; but their plot being discovered, they hastily assembled at Dolores and raised the standard of revolt (1810). Thus banded together, but badly organized and poorly armed, a body of 5,000 insurgents marched from Dolores, headed by Hidalgo and Allende, and approached Guana-

juato, where the intendente Riaña had intrenched himself in a fortified alhondiga, or granary. The attack of the rebels was headlong and bloody. The gates were fired with flaming rubbish, and through the glowing way the mad throng rushed, and after a hand-to-hand conflict (September 28, 1810) the fortress fell. The royalist leader had been killed, and scenes of pillage and riot followed. Meanwhile the viceroy in Mexico prepared to receive the insurgents, and his ally, the church, excommunicated their leaders. The military force of the royalists was inconsiderable, and what there was, it was feared, might prove not as loyal as was desirable. As Hidalgo marched towards the capital, he tried to seduce to his side a young lieutenant, Augustin Iturbide, who was in command of a small outlying force. The future emperor declined the offer, and, making his way to the city, was at once sent to join Trujillo, who commanded a corps of observation which confronted the insurgents, and who finally ran the chances of a battle at Las Cruces. . . . The insurgents soon surrounded him, and he was only able to reach the city by breaking with a part of his force through the enveloping line. Hidalgo had lost 2,000 men, but he had gained the day. He soon intercepted a despatch and learned from it that General Calleja had been put in motion from San Luis Potosi, and it seemed more prudent to Hidalgo that, instead of approaching Mexico, he should retreat to be nearer his recruiting ground. The retrograde movement brought the usual result to an undisciplined force, and he was already weakened by desertions when Calleja struck his line of march at Aculeo. Hidalgo felt it important for the revolution to have time enough to spread into other parts of the province, and so he merely fought Calleja to cover his further retreat. The rebel leader soon gathered his forces at Celaya, while Allende, his colleague, posted himself at Guanajuato. Here the latter was attacked by Calleja and routed, and the royal forces made bloody work in the town. Hidalgo, moving to Valladolid, reorganized his army, and then, proceeding to Guadalajara, he set up a form of government, with Ignacio Lopez Rayon as Secretary-general. At this time the insurgents held completely the provinces of Nueva Galicia, Zacatecas, and San Luis Potosi, a belt of country stretching from sea to sea in the latitude of Tampico. . . . In January, 1811, the signs were not very propitious for the royalists. . . . At this juncture . . . Hidalgo moved out from Guadalajara with his entire force, which was large enough, consisting of 60,000 foot, 20,000 horse, and 100 cannon; but it was poorly armed, and without effective discipline; while Calleja commanded a well-equipped and well-organized force, but in extent it only counted 3,000 foot, with as many horse, and ten guns. At the bridge of Calderon, 10 or 11 leagues from the city, Hidalgo prepared to stand. Here Calleja attacked him, and won the day, entering Guadalajara as a victor on the 21st of January, 1811. "Hidalgo fled with his broken army, and soon resigned the command to Allende. This general had scarcely 4,000 or 5,000 men left when he reached Saltillo, where he joined Jimenes. The disheartenment of defeat was spreading through the country. Town after town was heard from as yielding to the victors. The leaders, counselling together at Saltillo, resolved

to escape to the United States; but, as they were marching,—about 2,000 in all, with 24 guns and a money-chest,—they fell into an ambush planned in the interest of a counter-revolution by one Elizondo, and, with nothing more than a show of resistance, the party was captured, one and all. The judgment of death upon Hidalgo, Allende, and Jimenes soon followed. The main force of the insurgents had thus disappeared, but a small body still remained in arms under the lead of José Maria Morelos." Morelos was uneducated, but capable and energetic, and he kept life in the rebellion for two years. He captured Orizaba in October, 1812, Oajaca in the following month, and Acapulco in the spring of 1813. In November of that year he appeared before Valladolid, the capital of Michoacan, but was attacked there by Iturbide and routed. "In January, 1814, Morelos made a final stand at Puruaran, but Iturbide still drove him on. Disaster followed upon disaster, till finally Morelos was deposed by his own congress. This body had adherents enough to make it necessary for Calleja to appeal to the home government for a reinforcement of 8,000 troops. . . . Morelos, meanwhile, commanding an escort which was protecting the migratory congress, was intercepted and captured by a force of royalists, and, after the forms of a trial, he was executed December 22, 1815. The campaign of 1816 was sustained by the insurgents against a force of 80,000 men which Calleja had collected. . . . Neither side had much success, and the war was simply tedious. At last, in August, a new viceroy, Juan Riaz de Apodaca, succeeded to Calleja, and uniting a more humane policy with vigor in disposing his forces, the leading rebel officers . . . surrendered in January, 1817. . . . A certain quixotic interest is lent to the closing months of the revolution by the adventurous exploits of Espoz y Mina. He had fitted out a small expedition in the United States, which, landing on the Gulf coast, for a while swept victoriously inland. . . . But Mina was finally surprised and executed. Other vagrant rebel leaders fell one by one into the hands of the royalists; but Guadalupe Victoria held out, and concealed himself in the wilds for two years."—J. Winsor, *Spanish North Am. (Narrative and Critical Hist: of Am., v. 8, ch. 4).*

A. D. 1820-1826.—Independence of Spain.—The brief empire of Iturbide and its fall.—Constitution of the Republic of the United Mexican States.—"The establishment of a constitutional government in Spain, in 1820, produced upon Mexico an effect very different from what was anticipated. As the constitution provided for a more liberal administration of government in Mexico than had prevailed since 1812, the increased freedom of the elections again threw the minds of the people into a ferment, and the spirit of independence, which had been only smothered, broke forth anew. Moreover, divisions were created among the old Spaniards themselves; some being in favor of the old system, while others were sincerely attached to the constitution. Some formidable inroads on the property and prerogatives of the church alienated the clergy from the new

government, and induced them to desire a return to the old system. The Viceroy, Apodaca, encouraged by the hopes held out by the Royalists in Spain, although he had at first taken the oath to support the constitution, secretly favored the party opposed to it, and arranged his plans for its overthrow. Don Augustin Iturbide, the person selected by the Viceroy to make the first open demonstration against the existing government, was offered the command of a body of troops on the western coast, at the head of which he was to proclaim the re-establishment of the absolute authority of the king. Iturbide, accepting the commission, departed from the capital to take command of the troops, but with intentions very different from those which the Viceroy supposed him to entertain. Reflecting upon the state of the country, and convinced of the facility with which the authority of Spain might be shaken off,—by bringing the Creole troops to act in concert with the old insurgents,—Iturbide resolved to proclaim Mexico wholly independent of the Spanish nation. Having his head quarters at the little town of Iguala, on the road to Acapulco, Iturbide, on the 24th of February, 1821, there proclaimed his project, known as the 'Plan of Iguala,' and induced his soldiers to take an oath to support it. This 'Plan' declared that Mexico should be an independent nation, its religion Catholic, and its government a constitutional monarchy. The crown was offered to Ferdinand VII, of Spain, provided he would consent to occupy the throne in person; and, in case of his refusal, to his infant brothers, Don Carlos and Don Francisco. A constitution was to be formed by a Mexican Congress; . . . all distinctions of caste were to be abolished. . . . The Viceroy, astonished by this unexpected movement of Iturbide, and remaining irresolute and inactive at the capital, was deposed, and Don Francisco Novello, a military officer, was placed at the head of the government; but his authority was not generally recognized, and Iturbide was left to pursue his plans in the interior without interruption. Being joined by Generals Guerrero and Victoria as soon as they knew that the independence of their country was the object of Iturbide, not only all the survivors of the first insurgents, but whole detachments of Creole troops flocked to his standard, and his success was soon rendered certain. The clergy and the people were equally decided in favor of Independence; . . . and, before the month of July, the whole country recognized the authority of Iturbide, with the exception of the capital, in which Novello had shut himself up with the European troops. Iturbide had already reached Queretaro with his troops, on his road to Mexico, when he was informed of the arrival, at Vera Cruz, of a new Viceroy. . . . At Cordova, whither the Viceroy had been allowed to proceed, for the purpose of an interview with Iturbide, the latter induced him to accept by treaty the Plan of Iguala, as the only means of securing the lives and property of the Spaniards then in Mexico, and of establishing the right to the throne in the house of Bourbon. By this agreement, called the 'Treaty of Cordova,' the Viceroy, in the name of the king, his master, recognized the independence of Mexico, and gave up the capital to the army of the insurgents, which took possession of it, without effusion of blood, on the 27th of September, 1821.

All opposition being ended, and the capital occupied, in accordance with a provision of the Plan of Iguala a provisional junta was established, the principal business of which was to call a congress for the formation of a constitution suitable to the country. At the same time a regency, consisting of five individuals, was elected, at the head of which was placed Iturbide. . . . When the congress assembled [Feb. 24, 1822], three distinct parties were found amongst the members. The Bourbonists, adhering to the Plan of Iguala altogether, wished a constitutional monarchy, with a prince of the house of Bourbon at its head; the Republican, setting aside the Plan of Iguala, desired a federal republic; while a third party, the Iturbidists, adopting the Plan of Iguala with the exception of the article in favor of the Bourbons, wished to place Iturbide himself upon the throne. As it was soon learned that the Spanish government had declared the treaty of Cordova null and void, the Bourbonists ceased to exist as a party, and the struggle was confined to the Iturbidists and the Republicans." By the aid of a mob demonstration in the city of Mexico, on the night of May 18, 1822, the former triumphed, and Iturbide was declared emperor, under the title of Augustin the First. "The choice was ratified by the provinces without opposition, and Iturbide found himself in peaceable possession of a throne to which his own abilities and a concurrence of favorable circumstances had raised him. Had the monarch elect been guided by counsels of prudence, and allowed his authority to be confined within constitutional limits, he might perhaps have continued to maintain a modified authority; but forgetting the unstable foundation of his throne, he began his reign with all the airs of hereditary royalty. On his accession a struggle for power immediately commenced between him and the congress." After arbitrarily imprisoning the most distinguished members of that body, Iturbide, at last, proclaimed its dissolution and substituted a junta of his own nomination. "Before the end of November an insurrection broke out in the northern provinces, but this was speedily quelled by the imperial troops." It was followed in December by a more formidable revolt, led off by Santa Anna (or Santana), a young general who had supported Iturbide, but who had been haughtily dismissed from the government of Vera Cruz. Santa Anna was joined by Victoria and other old Republican leaders, and the power of Iturbide crumbled so rapidly that he resigned his crown on the 19th of March, 1823, promising to quit the country, on being assured a yearly allowance of \$25,000 for his support. "With his family and suite he embarked for Leghorn on the 11th of May. . . . From Italy he proceeded to London, and made preparations for returning to Mexico; in consequence of which, congress, on the 28th of April, 1824, passed a decree of outlawry against him. He landed in disguise at Soto la Marina, July 14th, 1824; was arrested by General Garza, and shot at Padilla by order of the provincial congress of Tamaulipas, on the 19th of that month. . . . On the departure of Iturbide, a temporary executive was appointed, consisting of Generals Victoria, Bravo, and Negrete, by whom the government was administered until the meeting of a new congress, which assembled at the capital in August, 1823. This body immediately entered on the duties of

preparing a new constitution, which was submitted on the 31st of January, 1824, and definitively sanctioned on the 4th of October following. By this instrument, modeled somewhat after the constitution of the United States, the absolute independence of the country was declared, and the several Mexican Provinces were united in a Federal Republic. The legislative power was vested in a Congress, consisting of a Senate and a House of Representatives. . . . The supreme executive authority was vested in one individual, styled the 'President of the United Mexican States.' . . . The third article in the constitution declared that 'The Religion of the Mexican Nation is, and will be perpetually, the Roman Catholic Apostolic. The nation will protect it by wise and just laws, and prohibit the exercise of any other whatever.' . . . On the 1st of January, 1825, the first congress under the federal constitution assembled in the city of Mexico; and, at the same time, General Guadalupe Victoria was installed as president of the republic, and General Nicholas Bravo as vice-president. The years 1825 and 1826 passed with few disturbances; the administration of Victoria was generally popular; and the country enjoyed a higher degree of prosperity than at any former or subsequent period."—M. Willson, *American History*, bk. 3, pt. 2, ch. 4-5.

A. D. 1822-1828.—Free-Masonry in politics.—The rival branches of the order.—The Escocés and the Yorkinos.—For some years a furious contest raged between two political societies, "known as the 'Escocés' and 'Yorkinos'—or, as we should call them, Scotch Free-Masons and York Free-Masons—whose secret organizations were employed for political purposes by two rival political parties. At the time of the restoration of the Constitutional Government of Spain in 1820, Free-Masonry was introduced into Mexico; and as it was derived from the Scotch branch of that order, it was called, after the name of the people of Scotland, 'Escocés.' Into this institution were initiated many of the old Spaniards still remaining in the country, the Creole aristocracy, and the privileged classes—parties that could ill endure the elevation of a Creole colonel, Iturbide, to the Imperial throne. When Mr. Poinsett was sent out as Ambassador to Mexico [1822], he carried with him the charter for a Grand Lodge from the American, or York order of Free-Masons in the United States. Into this new order the leaders of the Democratic party were initiated. The bitter rivalry that sprung up between these two branches of the Masonic body kept the country in a ferment for ten years, and resulted finally in the formation of a party whose motto was opposition to all secret societies, and who derived their name of Anti-Masons from the party of the same name then flourishing in the United States. When the Escocés had so far lost ground in popular favor as to be in the greatest apprehension from their prosperous but embittered rivals, the Yorkinos, as a last resort, to save themselves, and to ruin the hated organization, they pronounced against all secret societies. . . . General Bravo, Vice-President of Mexico, and leader of the Escocés, having issued his proclamation declaring that, as a last resort,

he appealed to arms to rid the republic of that pest, secret societies, and that he would not give up the contest until he had rooted them out, root and branch, took up his position at Tulancingo—a village about 30 miles north of the City of Mexico. Here, at about daylight on the morning of the 7th January, 1828, he was assailed by General Guerrero, the leader of the Yorkinos, and commander of the forces of government.' After a slight skirmish, in which eight men were killed and six wounded, General Bravo and his party were made prisoners; and thus perished forever the party of the Escocés. This victory was so complete as to prove a real disaster to the Yorkinos. The want of outside pressure led to internal dissensions; so that when two of its own members, Guerrero and Pedraza, became rival candidates for the presidency, the election was determined by a resort to arms."—R. A. Wilson, *Mexico: its Peasants and its Priests*, ch. 5.

ALSO IN: H. H. Bancroft, *Hist. of the Pacific States*, v. 8 (*Mexico*, v. 5), ch. 2.

A. D. 1828-1844.—The rise of Santa Anna.—Dissolution of the Federal System.—The Unitary Republic established.—Recognition by Spain.—The Pastry War.—Retrogradation and decline.—"After the death of Iturbide, by far the most powerful person in the nation was the Creole general Santa Anna, who, at the age of 24, had already destroyed the military empire of his chief. Santa Anna at first interested himself in the visionary project of Bolívar for framing a general confederation of the new nations of South America [see COLOMBIAN STATES: A. D. 1826]. This project . . . failed completely; and for several years he settled down as governor of Vera Cruz, reconciled himself to the Federal Republic, and took no part in public life. In 1828, however, the Presidential election led to a civil war in which Santa Anna and his favourite Veracrusanos first found out their capabilities; and they had an opportunity of testing them again in the next year, when the feeble force of Barrados, the last military attempt made by Spain to reduce Mexico, was cut to pieces at Tampico. From that movement Santa Anna became the sole controller of the destinies of the country: and in 1833 he was elected President. Forty years ago all Europe knew the picture of Santa Anna, with his tall spare figure, sunburnt face, and black hair curling over his forehead; how he lived on his hacienda of Manga de Clavo, cockfighting, gambling, and horse-racing, occasionally putting himself at the head of his bronzed troops, and either making a dash at an insurrection, or making a pronunciamiento on his own account. Mexican histories tell how gallantly he defended Vera Cruz in 1839, against the French invasion under Prince de Joinville [called 'the Pastry War,' because consequent on the non-payment of French claims, among which there was prominence given to a certain pastry-cook's claim for goods destroyed in the riot of a revolution at the capital in 1828]; how his leg, having been shattered by a ball, was buried with a solemn service and a funeral oration in the cemetery of Santa Paula in Mexico; and how, in a few years, when Santa Anna was in disgrace with the people, they destroyed the tomb, and kicked Santa Anna's limb about the streets with every mark of hatred and contempt. . . . The manifold difficulties of govern-

ment in Mexico sufficiently attested the weakness of the Federal constitution; and in 1835, after a trial of eleven years, the state governments were dissolved, and the Republic, one and indivisible, set up for a time in their place. There was now to be a President, elected by an indirect vote for eight years, a Senate, and a House of Deputies, both elected by a direct popular vote, and an elective Supreme Court. Santa Anna, who was identified with the Unitary principle, was re-elected three times; so that with some intermission he governed Mexico for 20 years. The dissolution of the Federal government naturally strengthened the bands of Santa Anna; and in 1836 Mexico was for the first time recognized by Spain. But the unitary republic was a time of disaster and disgrace; and from the point of view of progress it was a period of reaction. . . . Europe looked forward, almost without jealousy, to the time when the great nation of North America would absorb this people of half-civilized Indians mixed with degenerate Spaniards. Events which now happened greatly strengthened this impression."—E. J. Payne, *Hist. of European Colonies*, ch. 20, sect. 6-7.

A. D. 1829-1837.—The Abolition of Slavery.—"The general affairs of the country in the second half of 1829 were in a chaotic state. Disorganization fettered every branch of the government. . . . And yet, amidst its constant struggle, Guerrero's administration decreed several progressive measures, the most important of which was the abolition of slavery. African slavery had indeed been reduced to narrow limits. The Dominican provincial of Chiapas, Father Matias Cordoba, gave freedom to the slaves on the estates of his order. On the 16th of September, 1825, President Victoria had liberated in the country's name the slaves purchased with a certain fund collected for that purpose, as well as those given up by their owners to the patriotic junta. The general abolition, however, was not actually carried out for some time, certain difficulties having arisen; and several states, among which was Zacatecas, had decreed the freedom of slaves before the general government arrived at a final conclusion on the subject. As a matter of fact, the few remaining slaves were in domestic service, and treated more like members of families than as actual chattels. At last Deputy Tornel, taking advantage of the time when Guerrero was invested with extraordinary powers, drew up and laid before him a decree for total abolition. It was signed September 15, 1829, and proclaimed the next day, the national anniversary. The law met with no demur save from Coahuila and Texas, in which state were about 1,000 slaves, whose manumission would cost heavily, as the owners held them at a high valuation. It seems that the law was not fully enforced; for on the 5th of April, 1837, another was promulgated, declaring slavery abolished without exception and with compensation to the owners."—H. H. Bancroft, *Hist. of the Pacific States*, v. 8 (Mexico, v. 5), ch. 4.

A. D. 1845.—The Annexation of Texas to the United States. See TEXAS: A. D. 1836-1845.

A. D. 1846.—The American aggression which precipitated war.—"Texas had claimed the Rio Grande as her western limit, though she had never exercised actual control over either New Mexico or the country lying between the

Nueces and the Rio Grande. The groundless character of the claims of Texas to the Rio Grande as its western boundary was even admitted by some friends of the measure. . . . Silas Wright, . . . referring to the boundaries of Texas, declared that 'they embraced a country to which Texas had no claims, over which she had never asserted jurisdiction, and which she had no right to cede.' Mr. Benton denounced the treaty [of annexation and cession of territory] as an attempt to seize 2,000 square miles of Mexican territory by the incorporation of the left bank of the Rio del Norte, which would be an act of direct aggression. . . . In ordering, therefore, General Taylor to pass a portion of his forces westward of the river Nueces, which was done before annexation was accomplished, President Polk put in peril the peace and the good name of the country. In his Annual Message of December of that year [1845] he stated that American troops were in position on the Nueces, 'to defend our own and the rights of Texas.' But, not content with occupying ground on and westward of the Nueces, he issued, on the 13th of January, 1846, the fatal order to General Taylor to advance and 'occupy positions on or near the left bank of the Rio del Norte.' That movement of the army from Corpus Christi to the Rio Grande, a distance of more than 100 miles, was an invasion of Mexican territory,—an act of war for which the President was and must ever be held responsible by the general judgment of mankind."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in Am.*, v. 2, ch. 2.

A. D. 1846-1847.—The American conquest of California. See CALIFORNIA: A. D. 1846-1847.

A. D. 1846-1847.—War with the United States.—The first movements of American invasion.—Palo Alto.—Resaca de la Palma.—Monterey.—Buena Vista.—Fremont in California.—"The annexation of Texas accomplished [see TEXAS: A. D. 1824-1836, and 1836-1845], General Taylor, the United States commander in the Southwest, received orders to advance to the Rio Grande. Such was the impoverished and distracted condition of Mexico that she apparently contemplated no retaliation for the injury she had sustained, and, had the American army remained at the Nueces, a conflict might perhaps have been avoided. But, on Taylor's approaching the Rio Grande, a combat ensued [May 8, 1846] at Palo Alto with Arista, the Mexican commander, who crossed over that stream. It ended in the defeat of the Mexicans, and the next day another engagement took place at Resaca de la Palma, with the same result. These actions eventually assumed considerable political importance. They were among the causes of General Taylor's subsequent elevation to the Presidency. As soon as intelligence of what had occurred reached Washington, President Polk, forgetting that the author of a war is not he who begins it, but he who has made it necessary, addressed a special message to Congress announcing that the Mexicans 'had at last invaded our territory, and shed the blood of our fellow-citizens on our own soil.' Congress at once (May 13th, 1846) passed an act providing money and men. Its preamble stated, 'Whereas, by the act of the Republic of Mexico, a state of

war exists between that country and the United States, be it enacted,' etc. As long previously as 1843, Mr. Bocanegra, the Mexican Minister of Foreign Relations, had formally notified the American government that the annexation of Texas would inevitably lead to war. General Almonte, the Mexican minister at Washington, in a note to Mr. Upshur, the Secretary of State, said that, 'in the name of his nation, and now for them, he protests, in the most solemn manner, against such an aggression; and he moreover declares, by express order of his government, that, on sanction being given by the executive of the Union to the Incorporation of Texas into the United States, he will consider his mission ended, seeing that, as the Secretary of State will have learned, the Mexican government is resolved to declare war as soon as it receives intimation of such an act.' War being thus provoked by the American government, General Scott received orders (November 18th, 1846) to take command of the expedition intended for the invasion of Mexico."—J. W. Draper, *Hist. of the Am. Civil War*, ch. 23 (v. 1).—After his defeat at Resaca de la Palma, the Mexican general Arista "retreated in the direction of San Luis Potosi, and was superseded by Gen. Pedro Ampudia. General Taylor marched his forces across the Rio Grande on the 17th of May and the invasion of Mexico was begun in earnest. From the 21st to the 24th of September, he was engaged with 7,000 men in the attack upon Monterey, the capital of Nueva Leon, garrisoned by a force of 9,000. He met with the same success which had attended his former engagements. General Ampudia was also forced to retire to San Luis Potosi. The brilliant features of this attack were the assault upon Obisnado Viejo by General Worth on the first day of the fight, and the storming of the heights above on the following day. . . . Upon the defeat of Ampudia, Santa Anna, having then just attained to the chief magistracy of Mexico [the American blockading squadron at Vera Cruz had permitted him to return to the country, expecting that his presence would be advantageous to the invaders], and left it in the hands of his Vice-President, Gomez Farias, took the command of the Mexican forces and set out to check the advance of General Taylor. On the 23d of February, 1847, the bloody battle of Angostura, as it is called by the Mexicans (known to the Americans as the battle of Buena Vista), was fought, and lost by the Mexican army. Santa Anna returned to San Luis Potosi, whence he was called to the capital to head off the insurrection against Gomez Farias, by the party called derisively the Polkos, because their insurrection at that time was clearly favorable to the movements of the American army, and because James K. Polk was then the President of the United States and head of the American party favorable to the war. It was at this time that the army of Taylor was reduced to about 5,000 men in order to supply General Winfield Scott with forces to carry out his military operations, and the field of war was transferred to the region between Vera Cruz and the capital. While these events were in progress an expedition under Gen. John C. Fremont had been made over-land through New Mexico and into California [see CALIFORNIA: A. D. 1846-1847; and NEW MEXICO: A. D. 1846], and under the directions of the United States government the Mexicans of Cali-

fornia had been incited to revolt."—A. H. Noll, *Short Hist. of Mexico*, ch. 9.

A. D. 1847 (March—September).—General Scott's campaign.—From Vera Cruz to the capital.—Cerro Gordo.—Contreras.—Churubusco.—Molino del Rey.—Chapultepec.—The conquest complete.—"General Winfield Scott was ordered to Mexico, to take chief command and conduct the war according to his own plan. This was, in brief, to carry an expedition against Vera Cruz, reduce its defences, and then march on the city of Mexico by the shortest route. . . . On the 7th of March [1847], the fleet with Scott's army came to anchor a few miles south of Vera Cruz, and two days later he landed his whole force—nearly 12,000 men—by means of surf-boats. Vera Cruz was a city of 7,000 inhabitants, strongly fortified. . . . On the 22d the investment was complete. A summons to surrender being refused, the batteries opened, and the bombardment was kept up for four days, the small war vessels joining in it. The Mexican batteries and the castle [of San Juan de Ulloa, on a reef in the harbor] replied with spirit, and with some little effect; but the city and castle were surrendered on the 27th. The want of draught animals and wagons delayed till the middle of April the march upon the capital of the country, 200 miles distant. The first obstacle was found at Cerro Gordo, 50 miles northwest of Vera Cruz, where the Mexicans had taken position on the heights around a rugged mountain pass, with a battery commanding every turn of the road. A way was found to flank the position on the extreme left, and on the morning of April 18th the Americans attacked in three columns. . . . The divisions of Twiggs and Worth . . . attacked the height of Cerro Gordo, where the Mexicans were most strongly entrenched, and where Santa Anna commanded in person. This being carried by storm, its guns were turned first upon the retreating Mexicans, and then upon the advanced position that Pillow was assaulting in front. The Mexicans, finding themselves surrounded, soon surrendered. Santa Anna, with the remainder of his troops, fled toward Jalapa, where Scott followed him and took the place."—W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S.*, v. 4, ch. 14.—"Less than a month later [after the battle of Cerro Gordo] the American army occupied the city of Puebla. Scott remained at Puebla during June and July, awaiting reinforcements and drilling them as they arrived. On the 7th of August he set out for the capital, which was now defended by about 30,000 troops. A series of encounters took place on the 19th, and on the next day three battles were fought, at Contreras, Churubusco, and San Antonio. They were in reality parts of one general engagement. The troops on both sides fought with stubbornness and bravery, but in the end the Mexicans were completely routed, and the pursuit of the flying enemy reached almost to the gates of the capital. A commissioner, Nicholas P. Trist, having been previously appointed to negotiate with the Mexicans, an armistice was now agreed upon, to begin on the 23d of August. The armistice, from a strategic

point of view, was a mistake, the advantage of the overwhelming victories of the 19th and 20th was in great part lost, and the Mexicans were enabled to recover from the demoralization which had followed their defeat. The position of the American army, in the heart of the enemy's country, where it might be cut off from reinforcements and supplies, was full of danger, and the fortifications which barred the way to the capital, Molino del Rey, Casa Mata, and Chapultepec, were exceedingly formidable. On the 7th of September the armistice came to an end. The negotiations had failed, and General Scott prepared to move on the remaining works. A reconnaissance was made on that day, and on the 8th Scott attacked the enemy. The army of Santa Anna was drawn up with its right resting on Casa Mata and its left on Molino del Rey. Both these positions were carried by assault, and the Mexicans, after severe loss, were defeated and driven off the field. The next two days were occupied in preparing for the final assault upon Chapultepec. A careful disposition was made of the troops, batteries were planted within range, and on the 12th they opened a destructive fire. On the 13th a simultaneous assault was made from both sides, the troops storming the fortress with great bravery and dash, and the works were carried, the enemy flying in confusion. The army followed them along the two causeways of Belen and San Cosmé, fighting its way to the gates of the city. Here a struggle continued till after nightfall, the enemy making a desperate defence. Early the next morning, a deputation of the city council waited upon General Scott, asking for terms of capitulation. These were refused, and the divisions of Worth and Quitman entered the capital. Street fighting was kept up for two days longer, but by the 16th the Americans had secured possession of the city. Negotiations were now renewed, and the occupation of the territory, meanwhile, continued. The principal towns were garrisoned, and taxes and duties collected by the United States. Occasional encounters took place at various points, but the warfare was chiefly of a guerrilla character. Towards the close of the war General Scott was superseded by General Butler. But the work had been already completed."—J. R. Soley, *The Wars of the U. S., 1789-1850 (Narrative and Critical Hist. of Am., v. 7, ch. 6)*.

ALSO IN: H. H. Bancroft, *Hist. of the Pacific States*, v. 8 (*Mexico*, v. 5), ch. 17-20.—Gen. W. Scott, *Memoirs, by himself*, ch. 27-32 (v. 2).—*President's Message and Doc's*, Dec. 7, 1847 (*Senate Ex. Doc.*, No. 1, 30th Cong., 1st Sess.).

A. D. 1848.—The Treaty of Guadalupe Hidalgo.—Territory ceded to the United States.—"The Mexican people had now succumbed to the victorious armies of the 'barbarians of the North.' The Mexican Government was favorable to the settlement of the questions which had caused this unhappy war. A new administration was in power. General Anaya on the 11th of November was elected President of the Mexican Republic until the 8th of January, 1848, when the constitutional term of office would expire. . . . National pride . . . bowed to the necessities of the republic, and the deputies assembled in the Mexican Congress favored the organization of a commission for the purpose of reopening negotiations with Mr. Trist,

who still remained in Mexico, and was determined to assume the responsibility of acting still as agent of the United States [although his powers had been withdrawn]. The lack of coöperation by the adherents of Santa Anna prevented immediate action on the part of these commissioners. On the 8th of January, 1848, General Herrera was elected Constitutional President of the Mexican Republic. . . . Under the new administration negotiations were easily opened with a spirit of harmony and concession which indicated a happy issue. Mexico gave up her claim to the Nueces as the boundary-line of her territory, and the United States did not longer insist upon the cession of Lower California and the right of way across the Isthmus of Tehuantepec. The previous offer of money by the United States for the cession of New Mexico and Upper California was also continued. . . . On the 2d of February a treaty of peace was unanimously adopted and signed by the commissioners at the city of Guadalupe Hidalgo. . . . The ratifications of the Mexican Congress and of the United States Senate were exchanged May 30th, 1848. The United States, by the terms of this treaty, paid to Mexico \$15,000,000 for the territory added to its boundaries. They moreover freed the Mexican Republic from all claims of citizens of the United States against Mexico for damages, which the United States agreed to pay to the amount of \$3,250,000. The boundary-line was also fixed between the two republics. It began in the Gulf of Mexico three miles from the mouth of the Rio Grande del Norte, running up the centre of that river to the point where it strikes the southern boundary of New Mexico; then westward along that southern boundary which runs north of El Paso, to its western termination; thence northward along the western line of New Mexico until it intersects the first branch of the river Gila, thence down the middle of the Gila until it empties into the Rio Colorado, following the division line between Upper and Lower California to the Pacific Ocean, one marine league south of the port of San Diego. On the 12th of June, the last of the United States troops left the capital of Mexico. . . . The partisan supporters of President Polk's administration did not hesitate to avow that the war with Mexico was waged for conquest of territory. . . . The demands of indemnity from Mexico first made by the United States were equal, exclusive of Texas, to half of the domain of Mexico, embracing a territory upward of 800,000 square miles. . . . The area of New Mexico, as actually ceded by treaty to the United States, was 526,078 square miles. The disputed ground of Texas, which rightfully belonged to Mexico, and which was also yielded in the treaty of peace, contained no less than 125,520 square miles. The acquisition of the total amount of 651,591 square miles of territory was one of the direct results of this war, in which President Polk was ever pretending 'to conquer a peace.' To this must be added the undisputed region of Texas, which was 325,520 square miles more, in order adequately to represent the acquisition of territory to the United States, amounting to 851,590 square miles. This has been computed to be seventeen times the extent of the State of New York. . . . The territory thus acquired included ten degrees of latitude on the Pacific coast, and extended east to the Rio Grande, a distance of 1,000 miles.

... [More than 1000] miles of sea-coast were added to the possessions of the United States. ... The mineral resources of the conquered territory, including California, New Mexico, Arizona, Western Colorado, Utah, and Nevada, have been developed to such an extent that their value is beyond computation."—H. O. Ladd, *Hist. of the War with Mexico*, ch. 30-31.

A. D. 1848-1861.—**The succession of Revolutions and the War of the Reform.**—**The new Constitution.**—**The government of Juarez and the Nationalization of Church property.**—"For a brief period, after the withdrawal of the American army, the Mexican people drew the breath of peace, disturbed only by outbreaks headed by the turbulent Paredes. ... In June, 1848, Señor Herrera (who had been in power at the opening of the war with the United States) took possession of the presidential chair. For the first time within the memory of men then living, the supreme power changed hands without disturbance or opposition. ... The army ... was greatly reduced, arrangements were made with creditors abroad, and for the faithful discharge of internal affairs. General Mariano Arista, formerly minister of war, assumed peaceful possession of power, in January, 1851, and continued the wise and economical administration of his predecessor. But Mexico could not long remain at peace, even with herself; she was quiet merely because utterly prostrated, and in December, 1852, some military officers, thirsting for power, rebelled against the government. They commenced again the old system of 'pronunciamientos'; usually begun by some man in a province distant from the seat of government, and gradually gaining such strength that when finally met by the lawful forces they were beyond control. Rather than plunge his country anew into the horrors of a civil war, General Arista resigned his office and sailed for Europe, where he died in poverty a few years later. It may astonish any one except the close student of Mexican history to learn the name of the man next placed in power by the revolutionists, for it was no one else than General Antonio Lopez de Santa Anna! Recalled by the successful rebels from his exile in Cuba and South America, Santa Anna hastened to the scene of conflict. ... He commenced at once to extend indefinitely the army, and to intrench himself in a position of despotic power, and, in December, 1853, he issued a decree which, in substance, declared him perpetual dictator. This aroused opposition all over the country, and the Liberals, who were opposed to an arbitrary centralized government, rose in rebellion. The most successful leaders were Generals Alvarez and Comonfort, who, after repeated victories, drove the arch conspirator from the capital, on the 9th of August, 1855. Santa Anna secretly left the city of Mexico, and a few days later embarked at Vera Cruz for Havana. During several years he resided in Cuba, St. Thomas, Nassau, and the United States, constantly intriguing for a return to power in Mexico."—F. A. Ober, *Young Folks' Hist. of Mexico*, ch. 33.—"Upon the flight of Santa Anna, anarchy was imminent in the capital. The most prominent promoters of the revolution assembled quickly, and elected Gen. Romulo Diaz de la Vega acting-president, and he succeeded in establishing order.

... By a representative assembly Gen. Martin Carrera was elected acting-president, and he was installed on the 15th of August, 1855, but resigned on the 11th of the following month, when the presidency devolved a second time upon Gen. Romulo Diaz de la Vega. The revolution of Alvarez and Comonfort, known as the Plan de Ayotla, was entirely successful, and under the wise and just administration of Diaz de la Vega, the country was brought to the wholly abnormal state of quiet and order. Representatives of the triumphant party assembled in Cuernavaca and elected Gen. Juan Alvarez president ad interim, and upon the formation of his cabinet he named Comonfort his Minister of War. Returning to the capital, he transferred the presidency to his Minister of War, and on the 12th of December, 1855, Gen. Ignacio Comonfort entered upon the discharge of his duties as acting-president. He was made actual president by a large majority in the popular election held two years later, and was reinstalled on the 1st of December, 1857. He proved to be one of the most remarkable rulers of Mexico, and his administration marks the beginning of a new era in Mexican history. Scarcely had Comonfort begun his rule as the substitute of Alvarez, when revolutions again broke out and assumed formidable proportions. Puebla was occupied by 5,000 insurgents. Federal troops sent against them joined their cause. Comonfort succeeded in raising an army of 16,000 men, well equipped, and at its head marched to Puebla and suppressed the revolution before the end of March. But in October another rebellion broke out in Puebla, headed by Col. Miguel Miramon. The government succeeded in suppressing this, as well as one which broke out in San Luis Potosi, and another, under the leadership of Gen. Tomas Mejia, in Queretaro. It was by Comonfort that the war between the Church and the government, so long threatened, was precipitated. In June, 1856, he issued a decree ordering the sale of all the unimproved real estate held by the Church, at its assessed value. The Church was to receive the proceeds, but the land was to become thereby freed from all ecclesiastical control." Upon information of a conspiracy centering in one of the monasteries of the city of Mexico, the president sent troops to take possession of the place, and finally ordered it to be suppressed. These measures provoked an implacable hostility on the part of the supporters of the Church. "On the 5th of February, 1857, the present Constitution of Mexico was adopted by Congress. Comonfort, as Provisional President, subscribed it, and it was under its provisions that he was elected actual president. But ten days after his inauguration in December, 1857, and his taking the oath to support the new Constitution, the President, supposing that he could gain the full support of the Liberals, and claiming that he had found the operation of the Constitution impracticable, dissolved Congress and set the Constitution aside. He threw his legal successor, Benito Juarez, the President of the Supreme Court of Justice, and one of the supporters of the new Constitution, into prison." Revolution upon revolution now followed in quick succession. Comonfort fled the country. Zuloaga, Pezuela, Páon, Miramon, were seated in turn in the presidential chair for brief terms of a half recognized government. "Constitutionally (if we may ever

use that word seriously in connection with Mexican affairs), upon the abandonment of the presidency by Comonfort, the office devolved upon the President of the Supreme Court of Justice. That office was held at the time by Don Benito Juarez, who thereupon became president de jure of Mexico. . . . The most curious specimen of the nomenclature adopted in Mexican history is that which gives to the struggle between the Church party and its allies and the Constitutional government the name of the War of the Reform. . . . What was thereby reformed it would be difficult to say, . . . further than the suppression of the outreaching power, wealth, and influence of the Church, and the assertion of the supremacy of the State. . . . But the 'War of the Reform' had all the bitterness of a religious war. . . . Juarez, who is thus made to appear as a reformer, was the most remarkable man Mexico has ever produced. He was born in 1806 in the mountains of Oaxaca. . . . He belonged to the Zapoteca tribe of Indians. Not a drop of Spanish blood flowed in his veins. . . . Upon the flight of Comonfort, Juarez was utterly without support or means to establish his government. Being driven out of the capital by Zuloaga he went to Guadalajara, and then by way of the Pacific coast, Panama, and New Orleans, to Vera Cruz. There he succeeded in setting up the Constitutional government, supporting it out of the customs duties collected at the ports of entry on the Gulf coast. It was war to the knife between the President in Vera Cruz and the Anti-Presidents in the capital. . . . On the 12th of July, 1859, Juarez made a long stride in advance of Comonfort by issuing his famous decree, 'nationalizing'—that is, sequestering, or more properly confiscating—the property of the Church. It was enforced in Vera Cruz at once. . . . The armies of the two rival governments met in conflict on many occasions. It was at Calpulalpan, in a battle lasting from the 21st to the 24th of December, 1860, that Miramon was defeated and forced to leave the country. General Ortega, in command of the forces of Juarez, advanced to the capital and held it for the return of his chief. When the army of Juarez entered the capital, on the 27th of December, the decree of sequestration began to be executed there with brutal severity. . . . Monasteries were closed forthwith, and the members of the various religious orders were expelled the country. . . . It is said that from the 'nationalized' church property the government secured \$20,000,000, without, as subsequent events showed, deriving any permanent benefit from it. It helped to precipitate another war, in which it was all dissipated, and the country was poorer than ever. . . . The decree issued by Juarez from Vera Cruz in 1859, nationalizing the property of the Church, was quickly followed up by a decree suspending for two years payment on all foreign debts. The national debt at that time amounted to about \$100,000,000, according to some statements, and was divided up between England, Spain, and France. England's share was about \$80,000,000. France's claim was comparatively insignificant. They were all said to have been founded upon usurious or fraudulent contracts, and the French claim was especially dubious. . . . Upon the issuing of the decree suspending payment on these foreign debts, the three creditor nations at once broke off diplo-

matic relations with Mexico, and Napoleon III., of France, proceeded to carry out a plan which had for some time occupied his mind."—A. H. Noll, *Short Hist. of Mexico*, ch. 10-11.

A. D. 1853.—Sale of Arizona to the United States.—The Gadsden Treaty. See ARIZONA: A. D. 1853.

A. D. 1861-1867.—The French intervention.—Maximilian's ill-starred empire and its fate.—The expedition against Mexico "was in the beginning a joint undertaking of England, France, and Spain. Its professed object, as set forth in a convention signed in London on October 31st, 1861, was 'to demand from the Mexican authorities more efficacious protection for the persons and properties of their (the Allied Sovereigns') subjects, as well as a fulfilment of the obligations contracted toward their Majesties by the Republic of Mexico.' . . . Lord Russell, who had acted with great forbearance towards Mexico up to this time, now agreed to co-operate with France and Spain in exacting reparation from Juarez. But he defined clearly the extent to which the intervention of England would go. England would join in an expedition for the purpose, if necessary, of seizing on Mexican custom-houses, and thus making good the foreign claims. But she would not go a step further. She would have nothing to do with upsetting the Government of Mexico, or imposing any European system on the Mexican people. Accordingly, the Second Article of the Convention pledged the contracting parties not to seek for themselves any acquisition of territory or any special advantage, and not to exercise in the internal affairs of Mexico any influence of a nature to prejudice the right of the Mexican nation to choose and to constitute freely the form of its government. The Emperor of the French, however, had already made up his mind that he would establish a sort of feudatory monarchy in Mexico. He had long had various schemes and ambitions floating in his mind concerning those parts of America on the shores of the Gulf of Mexico, which were once the possessions of France. . . . At the very time when he signed the convention with the pledge contained in its second article, he had already been making arrangements to found a monarchy in Mexico. If he could have ventured to set up a monarchy with a French prince at its head, he would probably have done so; but this would have been too bold a venture. He, therefore, persuaded the Archduke Maximilian, brother of the Emperor of Austria, to accept the crown of the monarchy he proposed to set up in Mexico. The Archduke was a man of pure and noble character, but evidently wanting in strength of mind, and he agreed, after some hesitation, to accept the offer. Meanwhile the joint expedition sailed. We [the English] sent only a line-of-battle ship, two frigates, and 700 marines. France sent in the first instance about 2,500 men, whom she largely reinforced immediately after. Spain had about 6,000 men, under the command of the late Marshal Prim. The Allies soon began to find that their purposes were incompatible. There was much suspicion about the designs of France. . . . Some of the claims set up by France disgusted the other Allies. The Jecker claims were for a long time after as familiar a subject of ridicule as our own

Pacifico claims had been. A Swiss house of Jecker & Company had lent the former Government of Mexico \$750,000, and got bonds from that Government, which was on its very last legs, for \$15,000,000. The Government was immediately afterwards upset, and Juarez came into power. M. Jecker modestly put in his claim for \$15,000,000. Juarez refused to comply with the demand. He offered to pay the \$750,000 lent and five per cent. interest, but he declined to pay exactly twenty times the amount of the sum advanced. M. Jecker had by this time become somehow a subject of France, and the French Government took up his claim. It was clear that the Emperor of the French had resolved that there should be war. At last the designs of the French Government became evident to the English and Spanish Plenipotentiaries, and England and Spain withdrew from the Convention. . . . The Emperor of the French 'walked his own wild road, whither that led him.' He overran a certain portion of Mexico with his troops. He captured Puebla after a long and desperate resistance [and after suffering a defeat on the 5th of May, 1862, in the battle of Cinco de Mayo]; he occupied the capital, and he set up the Mexican Empire, with Maximilian as Emperor. French troops remained to protect the new Empire. Against all this the United States Government protested from time to time. . . . However, the Emperor Napoleon cared nothing just then about the Monroe doctrine, complacently satisfied that the United States were going to pieces, and that the Southern Confederacy would be his friend and ally. He received the protests of the American Government with unveiled indifference. At last the tide in American affairs turned. The Confederacy crumbled away; Richmond was taken; Lee surrendered; Jefferson Davis was a prisoner. Then the United States returned to the Mexican Question, and the American Government informed Louis Napoleon that it would be inconvenient, gravely inconvenient, if he were not to withdraw his soldiers from Mexico. A significant movement of American troops under a renowned General, then flushed with success, was made in the direction of the Mexican frontier. There was nothing for Louis Napoleon but to withdraw [March, 1867]. . . . The Mexican Empire lasted two months and a week after the last of the French troops had been withdrawn. Maximilian endeavoured to raise an army of his own, and to defend himself against the daily increasing strength of Juarez. He showed all the courage which might have been expected from his race, and from his own previous history. But in an evil hour for himself, and yielding, it is stated, to the persuasion of a French officer, he had issued a decree that all who resisted his authority in arms should be shot. By virtue of this monstrous ordinance, Mexican officers of the regular army, taken prisoners while resisting, as they were bound to do, the invasion of a European prince, were shot like brigands. The Mexican general, Ortega, was one of those thus shamefully done to death. When Juarez conquered, and Maximilian, in his turn, was made a prisoner, he was tried by court-martial, condemned and shot. . . . The French Empire never recovered the shock of this Mexican failure."—J. McCarthy, *Hist. of Our Own Times*, ch. 44.

A. D. 1867-1892.—The restored Republic.—“On the 15th of July [1867] Juarez made a solemn entry into the capital. Many good citizens of Mexico, who had watched gloomily the whole episode of the French intervention, now emerged to light and rejoiced conspicuously in the return of their legitimate chief. . . . He was received with genuine acclamations by the populace, while high society remained within doors, curtains close-drawn, except that the women took pride in showing their deep mourning for the death of the Emperor. . . . Peace now came back to the country. A general election established Juarez as President, and order and progress once more consented to test the good resolutions of the Republic.” Santa Anna made one feeble and futile attempt to disturb the quiet of his country, but was arrested without difficulty and sent into exile again. But Juarez had many opponents and enemies to contend with. “As the period of election approached, in 1871, party lines became sharply divided, and the question of his return to power was warmly contested. A large body still advocated the re-election of Juarez, as of the greatest importance to the consolidation of the Constitution and reform, but the admirers of military glory claimed the honors of President for General Diaz, who had done so much, at the head of the army, to restore the Republic. A third party represented the interests of Lerdo, minister of Juarez all through the epoch of the intervention, a man of great strength of character and capacity for government. . . . The campaign was vigorous throughout the country. . . . The election took place; the Juaristas were triumphant. Their party had a fair majority and Juarez was re-elected. But the Mexicans not yet had learned to accept the ballot, and a rebellion followed. The two defeated parties combined, and civil war began again. Government defended itself with vigor and resolution, and, in spite of the popularity of General Diaz as a commander, held its own during a campaign of more than a year. Its opponents were still undaunted, and the struggle might have long continued but for the sudden death of Juarez, on the 19th of July, 1872. . . . Don Sebastian Lerdo de Tejada, then President of the Supreme Court, assumed the government, was elected President, and the late agitation of parties was at an end. For three years peace reigned in Mexico, and then began another revolution. Towards the end of 1875, rumors of dissatisfaction were afloat. . . . Early in the next year, a ‘Plan’ was started, one of those fatal propositions for change which have always spread like wildfire through the Mexican community. By midsummer, the Republic was once more plunged in civil war. Although he had apparently no hand in the ‘Plan’ of Tuxtepec, General Porfirio Diaz appeared at the head of the army of the revolutionists. . . . During the summer there was fighting and much confusion, in the midst of which the election took place for the choice of President for another term of four years. The result was in favor of Lerdo de Tejada, but he was so unpopular that he was

obliged soon after to leave the capital, on the 20th of November, accompanied by his ministers and a few other persons. The other *Lerdistas* hid themselves, Congress dissolved, and the opposition triumphed. Thus ended the government of the *Lerdistas*, but a few days before the expiration of its legal term. On the 24th of November, General Porfirio Diaz made his solemn entry into the capital, and was proclaimed Provisional President. After a good deal of fighting all over the country, Congress declared him, in May, 1877, to be Constitutional President for a term to last until November 30, 1880. . . . President Diaz was able to consolidate his power, and to retain his seat without civil war, although this has been imminent at times, especially towards the end of his term. In 1880, General Manuel Gonzalez was elected, and on the 1st of December of that year, for the second time only in the history of the Republic, the retiring President gave over his office to his legally elected successor. . . . The administration of Gonzalez passed through its four years without any important outbreak. . . . At the end of that term General Diaz was re-elected and became President December 1, 1884. The treasury of the country was empty, the Republic without credit, yet he has [1888] . . . succeeded in placing his government upon a tolerably stable financial basis, and done much to restore the

foreign credit of the Republic."—S. Hale, *The Story of Mexico*, ch. 41-42.—"At the close of Maximilian's empire Mexico had but one railroad, with 260 miles of track. To-day she has them running in all directions, with an [aggregate] of 10,025 kilometers (about 6,300 miles), and is building more. Of telegraph lines in 1867 she had but a few short connections, under 3,000 kilometers; now she has telephone and telegraph lines which aggregate between 60,000 and 70,000 kilometers. . . . In his . . . message to Congress (1891) President Diaz said: 'It is gratifying to me to be able to inform Congress that the financial situation of the republic continues to improve. . . . Without increasing the tariff, the custom-houses now collect \$9,000,000 more than they did four years ago.' . . . The revenues of the republic have more than doubled in the past twenty years. In 1870 they were \$16,000,000; they are estimated now at over \$36,000,000." The third term of President Diaz, "now [1892] drawing to a close, has been one of great prosperity. . . . As we write popular demonstrations are being made in favor of another term."—W. Butler, *Mexico in Transition*, pp. 284-287.—President Diaz was re-elected for a fourth term, which began December 1, 1892, and will expire in 1896.

A. D. 1837.—Admission into the Union as a State.—Settlement of Boundaries.—A conflict between the terms of the constitution under which the state of Ohio was admitted into the Union in 1803 and the Act of Congress which, in 1805, erected the Territory of Michigan, gave rise to a serious boundary dispute between the two. The Michigan claim rested not only upon the Act of 1805, but primarily upon the great Ordinance of 1787. It involved the possession

of a wedge-shaped strip of territory, which "averaged six miles in width, across Ohio, embraced some 468 square miles, and included the lake-port of Toledo and the mouth of the Maumee river." In 1834, Michigan began to urge her claims to statehood. "In December, President Jackson laid the matter before congress in a special message. Congress quietly determined to 'arbitrate' the quarrel by giving to Ohio the disputed tract, and offering Michigan, by way of partial recompense, the whole of what is to-day her upper peninsula; . . . making this settlement of the quarrel one of the conditions precedent to the admission of Michigan into the Union. In September, 1836, a state convention, called for the sole purpose of deciding the question, rejected the proposition on the ground that congress had no right to annex such a condition, according to the terms of the ordinance; a second convention, however, approved of it on the 15th of December following, and congress at once accepted this decision as final. Thus Michigan came into the sisterhood of states, January 26, 1837, with the territorial limits which she possesses to-day."—R. G. Thwaites, *The Boundaries of Wisconsin* (Wis. Hist. Soc. Coll's, v. 11, pp. 456-460).

MICRONESIA (or Mikronesia).—"North of the equator, between New Guinea and the south coast of Japan, the great ocean is studded with countless little islands, which, running partly parallel with those of Melanesia, form a second and outer zone round the Australian mainland. In consequence of their remarkably small size, they are collectively called Mikronesia, and are conveniently grouped in three archipelagoes. Of these the most easterly is again subdivided into the two clusters of the Gilbert and Marshall Islands [the former belonging to England, the latter under German protection]. Farther west follows the large group of the Carolines [belonging to Spain], including the Pelew Isles, still farther to the west, called also the Western Carolines. North of them are the Ladrões or Mariannes [occupied by the Spaniards since 1565], beyond which, in the same direction, are a number of small groups, the most im-

portant of which are the Bonin Isles, on many maps named the Magalhaes, or Anson Archipelago, almost all of which are uninhabited. Most of these groups are inhabited by the fair race scattered over Polynesia, and presenting the most striking contrast to the Papuas of Melanesia."—A. R. Wallace, *Australasia*, ch. 25 (*Stanford's Compendium*).

MIDDLE AGES.—"The term Middle Ages is applied to the time which elapsed between the fall of the Roman Empire and the formation of the great modern monarchies, between the first permanent invasion of the Germans, at the beginning of the 5th century of our era [see GAUL: A. D. 406-409], and the last invasion, made by the Turks, ten centuries later, in 1453."—V. Duruy, *Hist. of the Middle Ages*, author's pref.—"It is not possible to fix accurate limits to the Middle Ages; . . . though the ten centuries from the 5th to the 15th seem, in a general point of view, to constitute that period."—H. Hallam, *The Middle Ages*, pref. to first ed.—"We commonly say that ancient history closed with the year 476 A. D. The great fact which marks the close of that age and the beginning of a new one is the conquest of the Western Roman Empire by the German tribes, a process which occupied the whole of the fifth century and more. But if we are to select any special date to mark the change, the year 476 is the best for the purpose. . . . When we turn to the close of medieval history we find no such general agreement as to the specific date which shall be selected to stand for that fact. For one author it is 1453, the fall of the Eastern Roman Empire through the capture of Constantinople by the Turks; for another, 1493, the discovery of America; for another, 1520, the full opening of the Reformation. This variety of date is in itself very significant. It unconsciously marks the extremely important fact that the middle ages come to an end at different dates in the different lines of advance—manifestly earlier in politics and economics than upon the intellectual side. . . . It is a transition age. Lying, as it does, between two ages, in each of which there is an especially rapid advance of civilization, it is not itself primarily an age of progress. As compared with either ancient or modern history, the additions which were made during the middle ages to the common stock of civilization are few and unimportant. Absolutely, perhaps, they are not so. . . . But the most important of them fall within the last part of the period, and they are really indications that the age is drawing to a close, and a new and different one coming on. Progress, however much there may have been, is not its distinctive characteristic. There is a popular recognition of this fact in the general opinion that the medieval is a very barren and uninteresting period of history—the 'dark ages'—so confused and without evident plan that its facts are a mere disorganized jumble, impossible to reduce to system or to hold in mind. This must be emphatically true for every one, unless there can be found running through all its confusion some single line of evolution which will give it meaning and organization. . . . Most certainly there must be some such general meaning of the age. The orderly and regular

progress of history makes it impossible that it should be otherwise. Whether that meaning can be correctly stated or not is much more uncertain. It is the difficulty of doing this which makes medieval history seem so comparatively barren a period. The most evident general meaning of the age is . . . assimilation. The greatest work which had to be done was to bring the German barbarian, who had taken possession of the ancient world and become everywhere the ruling race, up to such a level of attainment and understanding that he would be able to take up the work of civilization where antiquity had been forced to suspend it and go on with it from that point. . . . Here, then, is the work of the middle ages. To the results of ancient history were to be added the ideas and institutions of the Germans; to the enfeebled Roman race was to be added the youthful energy and vigor of the German. Under the conditions which existed this union could not be made—a harmonious and homogeneous Christendom could not be formed, except through centuries of time, through anarchy, and ignorance, and superstition.”—G. B. Adams, *Civilization During the Middle Ages*, introd.—“We speak, sometimes, of the ‘Dark Ages,’ and in matters of the exact sciences perhaps they were dark enough. Yet we must deduct something from our youthful ideas of their obscurity when we find that our truest lovers of beauty fix the building age of the world between the years 500 and 1500 of our era. Architecture, more than any other art, is an index to the happiness and freedom of the people; and during this period of 1,000 years, ‘an architecture, pure in its principles, reasonable in its practice, and beautiful to the eyes of all men, even the simplest,’ covered Europe with beautiful buildings from Constantinople to the north of Britain. In presence of this manifestation of free and productive intelligence, unmatched even in ancient Greece and Rome, and utterly unmatchable to-day, we may usefully reflect upon the expressive and constructive force of the spirit of Christendom, even in its darkest hours. The more closely we examine the question, the less ground we shall find for the conception of the Middle Ages as a long sleep followed by a sudden awakening. Rather we should consider that ancient Greece was the root, and ancient Rome the stem and branches of our life; that the Dark Ages, as we call them, represent its flower, and the modern world of science and political freedom the slowly-matured fruit. If we consider carefully that the Christian humanistic spirit held itself as charged from the first with the destinies of the illiterate and half-heathen masses of the European peoples, whereas, neither in Greece nor in the Roman Empire was civilisation intended for more than a third or a fourth part of the inhabitants of their territories, we shall not be surprised at an apparent fall of intellectual level, which really meant the beginning of a universal rise hitherto unknown in the history of the world. Ideas of this kind may help us to understand what must remain after all a paradox, that we have been taught to apply the term ‘Dark Ages’ to the period of what were in some respects the greatest achievements of the human mind, for example, the Cathedral of Florence and the writings of Dante. . . . It is perfectly obvious now to all who look carefully at these questions, that the instinct of

our physical science and naturalistic art, of our evolutionist philosophy and democratic politics, is not antagonistic to, but is essentially one with the instinct which, in the Middle Ages, regarded all beauty and truth and power as the working of the Divine reason in the mind of man and in nature. What a genuine though grotesque anticipation of Charles Darwin is there in Francis of Assisi preaching to the birds!”—B. Bosanquet, *The Civilization of Christendom*, ch. 3.—“‘I know nothing of those ages which knew nothing.’ I really forget to which of two eminent wits this saying belongs; but I have often thought that I should have liked to ask him how he came to know so curious and important a fact respecting ages of which he knew nothing. Was it merely by hearsay? Everybody allows, however, that they were dark ages. Certainly; but what do we mean by darkness? Is not the term, as it is generally used, comparative? Suppose I were to say that I am writing ‘in a little dark room,’ would you understand me to mean that I could not see the paper before me? Or if I should say that I was writing ‘on a dark day,’ would you think I meant that the sun had not risen by noon? Well, then, let me beg you to remember this, when you and I use the term, dark ages. . . . Many causes . . . have concurred to render those ages very dark to us; but, for the present, I feel it sufficient to remind the reader, that darkness is quite a different thing from shutting the eyes; and that we have no right to complain that we can see but little until we have used due diligence to see what we can. As to the other point—that is, as to the degree of darkness in which those ages were really involved, and as to the mode and degree in which it affected those who lived in them, I must express my belief, that it has been a good deal exaggerated. There is no doubt that those who lived in what are generally called the ‘middle’ or the ‘dark’ ages, knew nothing of many things which are familiar to us, and which we deem essential to our comfort, and almost to our existence; but still I doubt whether, even in this point of view, they were so entirely dark as some would have us suppose.”—S. R. Maitland, *The Dark Ages*, introd.—“In the Middle Ages both sides of human consciousness—that which was turned within as that which was turned without—lay dreaming or half-awake beneath a common veil. The veil was woven of faith, illusion, and childish prepossession, through which the world and history were seen clad in strange hues. Man was conscious of himself only as a member of a race, people, party, family, or corporation—only through some general category. In Italy this veil first melted into air; an objective treatment and consideration of the state and of all the things of this world became possible. The subjective side at the same time asserted itself with corresponding emphasis; man became a spiritual individual, and recognised himself as such.”—J. Burckhardt, *The Renaissance in Italy*, pt. 2, ch. 1 (v. 1).—See, also, EUROPE; EDUCATION, MEDIEVAL; LIBRARIES, MEDIEVAL; MEDICAL SCIENCE, MEDIEVAL; MONEY AND BANKING, MEDIEVAL; TRADE, MEDIEVAL.

MIKADO.—“Though this is the name by which the whole outer world knows the sovereign of Japan, it is not that now used in Japan itself, except in poetry and on great occasions. The Japanese have got into the habit of calling their sovereign by such alien Chinese titles as Tenshi, ‘the Son of Heaven’; Ten-ō, or Tennō, ‘the Heavenly Emperor’; Shujo, ‘the Supreme Master.’ His designation in the official translations of modern public documents into English is ‘Emperor.’ . . . The etymology of the word Mikado is not quite clear. Some—and theirs is the current opinion—trace it to ‘mi,’ ‘august,’ and ‘kado,’ a ‘gate,’ reminding one of the ‘Sublime Porte’ of Turkey. . . . The word Mikado is often employed to denote the monarch’s Court as well as the monarch himself.”—B. H. Chamberlain, *Things Japanese*, p. 229.

A. D. 268.—Aureolus besieged.—During the miserable and calamitous reign of the Roman emperor Gallienus, the army on the Upper Danube invested their leader, Aureolus, with the imperial purple, and crossed the Alps to place him on the throne. Defeated by Gallienus in a battle fought near Milan, Aureolus and his army took refuge in that city and were there besieged. During the progress of the siege a conspiracy against Gallienus was formed in his own camp, and he was assassinated. The crown was then offered to the soldier Claudius—afterwards called Claudius Gothicus—and he accepted it. The siege of Milan was continued by Claudius, the city was forced to surrender and Aureolus was put to death.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 11.

A. D. 286.—The Roman imperial court.—“Diocletian and Maximian were the first Roman princes who fixed, in time of peace, their ordinary residence in the provinces. . . . The court of the emperor of the west [Maximian] was, for the most part, established at Milan, whose situation, at the foot of the Alps, appeared far more convenient than that of Rome, for the important purpose of watching the motions of the barbarians of Germany. Milan soon assumed the splendour of an imperial city. The houses are described as numerous and well-built; the manners of the people as polished and liberal.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 18.

A. D. 313.—Constantine’s Edict of Toleration. See ROME: A. D. 313.

A. D. 374-397.—The Ambrosian Church.—The greatness of the Milanese, in later times, “was chiefly originated and promoted by the prerogatives of their Archbishop, amongst which that of crowning, and so in a manner constituting, the King of Italy, raised him in wealth and splendour above every other prelate of the Roman Church, and his city above every other city of Lombardy in power and pride. . . . It is said that the Church of Milan was founded by St. Barnabas; it is certain that it owed its chief aggrandisement, and the splendour which distinguished it from all other churches, to St. Ambrose [Archbishop from 374 to 397], who, having come to Milan in the time of Valentinian as a magistrate, was by the people made Bishop also, and as such was able to exalt it by the ordination of many inferior dignitaries, and by obtaining supremacy for it over all the Bishops of Lombardy. . . . This church received from St. Ambrose a peculiar liturgy, which was always much loved and venerated by the Milanese, and continued longer in use than any of those which anciently prevailed in other churches of the West. To the singing in divine service, which was then artless and rude, St. Ambrose, taking for models the ancient melodies still current in his time, the last echoes of the civilisation of distant ages, imparted a more regular rhythm [known as ‘the Ambrosian Chant’]; which, when reduced by St. Gregory to the grave simplicity of tone that best accords with the majesty of worship, obtained the name of ‘Canto fermo’; and afterwards becoming richer, more elaborate, and easier to learn through the many ingenious inventions of Guido d’Arezzo, . . . was brought by degrees to the perfection of modern counterpoint. . . . St. Ambrose also composed prayers for his church, and hymns; amongst others, according to popular belief, that most sublime and majestic one, the Te Deum, which is now familiar and dear to the whole of Western Christendom. It is said that his clergy were not forbidden to marry. Hence an opinion prevailed that this church, according to the ancient statutes, ought not to be entirely subject to that of Rome.”—G. B. Testa, *Hist. of the War of Frederick I. against the Communes of Lombardy*, pp. 23-24.

A. D. 539.—Destroyed by the Goths.—When Belisarius, in his first campaign for the recovery of Italy from the Goths, had secured possession of Rome, A. D. 538, he sent a small force northward to Milan, and that city, hating its Gothic rulers, was gladly surrendered to him. It was occupied by a small Roman garrison and unwisely left to the attacks upon it that were inevitable. Very soon the Goths appeared before its walls, and with them 10,000 Burgundians who had crossed the Alps to their assistance. Belisarius despatched an army to the relief of the city, but the generals in command of it were cowardly and did nothing. After stoutly resisting for six months, suffering the last extremes of starvation and misery, Milan fell, and a terrible vengeance was wreaked upon it. “All the men were slain, and these, if the information

given to Procopius was correct, amounted to 300,000. The women were made slaves, and handed over by the Goths to their Burgundian allies in payment of their services. The city itself was rased to the ground: not the only time that signal destruction has overtaken the fair capital of Lombardy."—T. Hodgkin, *Italy and her Invaders*, bk. 5, ch. 11.—See, also, ROME: A. D. 535-553.—"The Goths, in their last moments, were revenged by the destruction of a city second only to Rome in size and opulence."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 41.

A. D. 1277-1447.—The rise and the reign of the Visconti.—Extension of their Tyranny over Lombardy.—The downfall of their House.—"The power of the Visconti in Milan was founded upon that of the Della Torre family, who preceded them as Captains General of the people at the end of the 13th century. Otho, Archbishop of Milan, first laid a substantial basis for the dominion of his house by imprisoning Napoleone Della Torre and five of his relatives in three iron cages in 1277, and by causing his nephew Matteo Visconti to be nominated both by the Emperor and by the people of Milan as imperial Vicar. Matteo, who headed the Ghibelline party in Lombardy, was the model of a prudent Italian despot. From the date 1311, when he finally succeeded in his attempts upon the sovereignty of Milan [see ITALY: A. D. 1310-1313], to 1323, when he abdicated in favour of his son Galeazzo, he ruled his states by force of character, craft, and insight, more than by violence or cruelty. Excellent as a general, he was still better as a diplomatist, winning more cities by money than by the sword. All through his life, as became a Ghibelline chief at that time, he persisted in fierce enmity against the Church. . . . Galeazzo, his son, was less fortunate than Matteo, surnamed *Il Grande* by the Lombards. The Emperor Louis of Bavaria threw him into prison on the occasion of his visit to Milan in 1327 [see ITALY: A. D. 1313-1330], and only released him at the intercession of his friend Castruccio Castracane. To such an extent was the growing tyranny of the Visconti still dependent upon their office delegated from the Empire. . . . Azzo [the son of Galeazzo] bought the city, together with the title of Imperial Vicar, from the same Louis who had imprisoned his father. When he was thus seated in the tyranny of his grandfather, he proceeded to fortify it further by the addition of ten Lombard towns, which he reduced beneath the supremacy of Milan. At the same time he consolidated his own power by the murder of his uncle Marco in 1329, who had grown too mighty as a general. . . . Azzo died in 1339, and was succeeded by his uncle Lucchino," who was poisoned by his wife in 1349. "Lucchino was potent as a general and governor. He bought Parma from Obizzo d' Este, and made the town of Pisa dependent upon Milan. . . . Lucchino left sons, but none of proved legitimacy. Consequently he was succeeded by his brother Giovanni, son of old Matteo *Il Grande* and Archbishop of Milan. This man,

the friend of Petrarch, was one of the most notable characters of the 14th century. Finding himself at the head of 16 cities, he added Bologna to the tyranny of the Visconti, in 1350, and made himself strong enough to defy the Pope. . . . In 1353 Giovanni annexed Genoa to the Milanese principality, and died in 1354, having established the rule of the Visconti over the whole of the north of Italy, with the exception of Piedmont, Verona, Mantua, Ferrara, and Venice. The reign of the Archbishop Giovanni marks a new epoch in the despotism of the Visconti. They are now no longer the successful rivals of the Della Torre family, or dependents on imperial caprice, but self-made sovereigns, with a well-established power in Milan and a wide extent of subject territory. Their dynasty, though based on force and maintained by violence, has come to be acknowledged; and we shall soon see them allying themselves with the royal houses of Europe. After the death of Giovanni, Matteo's sons were extinct. But Stefano, the last of his family, had left three children, who now succeeded to the lands and cities of the house. They were named Matteo, Bernabo, and Galeazzo. Between these three princes a partition of the heritage of Giovanni Visconti was effected. . . . Milan and Genoa were to be ruled by the three in common." Matteo was put out of the way by his two brothers in 1355. Bernabo reigned brutally at Milan, and Galeazzo with great splendor at Pavia. The latter married his daughter to the Duke of Clarence, son of Edward III. of England, and his son to Princess Isabella, of France. "Galeazzo died in 1378, and was succeeded in his own portion of the Visconti domain by his son Gian Galeazzo," who was able, seven years afterwards, by singular refinements of treachery, to put his uncle to death and take possession of his territories. "The reign of Gian Galeazzo, which began with this coup-d'état (1385-1402), forms a very important chapter in Italian history. . . . At the time of his accession the Visconti had already rooted out the Correggi and Rossl of Parma, the Scotti of Piacenza, the Pelavicini of San Donnino, the Tornielli of Novara, the Ponzone and Cavalcabò of Cremona, the Beccaria and Languschi of Pavia, the Fisiraghi of Lodi, the Brusati of Brescia. . . . But the Carrara family still ruled at Padua, the Gonzaga at Mantua, the Este at Ferrara, while the great house of Scala was in possession of Verona. Gian Galeazzo's schemes were at first directed against the Scala dynasty. Founded, like that of the Visconti, upon the imperial authority, it rose to its greatest height under the Ghibelline general Can Grande and his nephew Mastino in the first half of the 14th century (1312-1351). Mastino had himself cherished the project of an Italian Kingdom; but he died before approaching its accomplishment. The degeneracy of his house began with his three sons. The two younger killed the eldest; of the survivors the stronger slew the weaker and then died in 1374, leaving his domains to two of his bastards. One of these, named Antonio, killed the other in 1381, and afterwards fell a prey to the Visconti in 1387. In his subjugation of Verona Gian Galeazzo contrived to make use of the Carrara family, although these princes were allied by marriage to the Scaligers, and had everything to lose by their downfall. He next proceeded to attack Padua, and gained the co-operation of

Venice. In 1388 Francesco da Carrara had to cede his territory to Visconti's generals, who in the same year possessed themselves for him of the Trevisan Marches. It was then that the Venetians saw too late the error they had committed in suffering Verona and Padua to be annexed by the Visconti. . . . Having now made himself master of the north of Italy with the exception of Mantua, Ferrara, and Bologna, Gian Galeazzo turned his attention to these cities." By intrigues of devilish subtlety and malignity, he drew the Marquis of Ferrara and the Marquis of Mantua into crimes which were their ruin, and made his conquest of those cities easy. "The whole of Lombardy was now prostrate before the Milanese viper. His next move was to set foot in Tuscany. For this purpose Pisa had to be acquired; and here again he resorted to his devilish policy of inciting other men to crimes by which he alone would profit in the long run. Pisa was ruled at that time by the Gambacorta family, with an old merchant named Pietro at their head." Gian Galeazzo caused Pietro to be assassinated, and then bought the city from the assassins (1399). "In 1399 the Duke laid hands on Siena; and in the next two years the plague came to his assistance by enfeebling the ruling families of Lucca and Bologna, the Guinizzi and the Bentivogli, so that he was now able to take possession of those cities. There remained no power in Italy, except the Republic of Florence and the exiled but invincible Francesco da Carrara, to withstand his further progress. Florence [see FLORENCE: A. D. 1390-1402] delayed his conquests in Tuscany. Francesco managed to return to Padua. Still the peril which threatened the whole of Italy was imminent. . . . At last, when all other hope of independence for Italy had failed, the plague broke out with fury in Lombardy," and Gian Galeazzo died of it in 1402, aged 55. "At his death his two sons were still mere boys. . . . The generals refused to act with them, and each seized upon such portions of the Visconti inheritance as he could most easily acquire. The vast tyranny of the first Duke of Milan fell to pieces in a day." The dominion which his elder son lost (see ITALY: A. D. 1402-1406) and which his younger son regained (see ITALY: A. D. 1412-1447) slipped from the family on the death of the last of them, in 1447.—J. A. Symonds, *Renaissance in Italy: The Age of the Despots*, ch. 2. —"At the end of the fourteenth century their [the Visconti's] informal lordship passed by a royal grant [from the Emperor Wenceslaus to Gian-Galeazzo, A. D. 1395] into an acknowledged duchy of the Empire. The dominion which they had gradually gained, and which was thus in a manner legalized, took in all the great cities of Lombardy, those especially which had formed the Lombard League against the Swabian Emperors. Pavia indeed, the ancient rival of Milan, kept a kind of separate being, and was formed into a distinct county. But the duchy granted by Wenceslaus to Gian-Galeazzo stretched far on both sides of the lake of Garda."—E. A. Freeman, *Historical Geog. of Europe*, ch. 8, sect. 3.

A. D. 1447-1454.—Competitors for the ducal succession to the Visconti.—The prize carried off by Francesco Sforza.—War of Milan and Florence with Venice, Naples, Savoy, and other states.—John Galeazzo Visconti had married (as stated above) a daughter of King John of France. "Valentine Visconti, one of the children of this marriage, married her cousin, Louis, duke of Orleans, the only brother of Charles VI. In their marriage contract, which the pope confirmed, it was stipulated that, upon failure of heirs male in the family of Visconti, the duchy of Milan should descend to the posterity of Valentine and the duke of Orleans. That event took place. In the year 1447, Philip Maria, the last prince of the ducal family of Visconti, died. Various competitors claimed the succession. Charles, duke of Orleans, pleaded his right to it, founded on the marriage contract of his mother, Valentine Visconti. Alfonso, king of Naples, claimed it in consequence of a will made by Philip Maria in his favor. The emperor contended that, upon the extinction of male issue in the family of Visconti, the fief returned to the superior lord, and ought to be re-annexed to the empire. The people of Milan, smitten with the love of liberty which in that age prevailed among the Italian states, declared against the dominion of any master, and established a republican form of government. But during the struggle among so many competitors, the prize for which they contended was seized by one from whom none of them apprehended any danger. Francis Sforza, the natural son of Jacomuzzo Sforza, whom his courage and abilities had elevated from the rank of a peasant to be one of the most eminent and powerful of the Italian condottieri, having succeeded his father in the command of the adventurers who followed his standard, had married a natural daughter of the last duke of Milan [see ITALY: A. D. 1412-1447]. Upon this shadow of a title Francis founded his pretensions to the duchy, which he supported with such talents and valor as placed him at last on the ducal throne."—W. Robertson, *Hist. of Charles the Fifth: View of the Progress of Society*, sect. 3. —"Francesco Sforza possessed himself of the supreme power by treachery and force of arms, but he saved for half a century the independence of a State which, after 170 years of tyranny, was no longer capable of life as a commonwealth, and furthered its prosperity, while he powerfully contributed to the formation of a political system which, however great its weakness, was the most reasonable under existing circumstances. Without the aid of Florence and Cosimo de' Medici, he would not have attained his ends. Cosimo had recognised his ability in the war with Visconti, and made a close alliance with him. . . . It was necessary to choose between Sforza and Venice, for there was only one alternative: either the condottiere would make himself Duke of Milan, or the Republic of San Marco would extend its rule over all Lombardy. In Florence several voices declared in favour of the old ally on the Adriatic. . . . Cosimo de' Medici gave the casting-vote in Sforza's favour.

... Without Florentine money, Sforza would never have been able to maintain the double contest—on the one side against Milan, which he blockaded and starved out; and on the other against the Venetians, who sought to relieve it, and whom he repulsed. And when, on March 25, 1450, he made his entry into the city which proclaimed him ruler, he was obliged to maintain himself with Florentine money till he had established his position and re-organised the State. . . . Common animosity to Florence and Sforza drew Venice and the king [Alfonso, of Naples] nearer to one another, and at the end of 1451 an alliance, offensive and defensive, was concluded against them, which Siena, Savoy, and Montferrat joined. . . . On May 16, 1452, the Republic, and, four weeks later, King Alfonso, declared war, which the Emperor Frederick III., then in Italy, and Pope Nicholas V., successor to Eugenius IV. since 1447, in vain endeavoured to prevent." The next year "a foreign event contributed more than all to terminate this miserable war. . . . On May 29, 1453, Mohammed II. stormed Constantinople. The West was threatened, more especially Venice, which had such great and wealthy possessions in the Levant, and Naples. This time the excellent Pope Nicholas V. did not exert himself in vain. On April 9, 1454, Venice concluded a tolerably favourable peace with Francesco Sforza at Lodi, in which King Alfonso, Florence, Savoy, Montferrat, Mantua, and Siena, were to be included. The king, who had made considerable preparations for war, did not ratify the compact till January 26 of the following year. The States of Northern and Central Italy then joined in an alliance, and a succession of peaceful years followed."—A. von Reumont, *Lorenzo de' Medici*, bk. 1, ch. 7 (v. 1).

A. D. 1512.—Expulsion of the French and restoration of the Sforzas.—Notwithstanding the success of the French at Ravenna, in their struggle with the Holy League formed against them by Pope Julius II. (see ITALY: A. D. 1510-1513), they could not hold their ground in Italy. "Cremona shook off the yoke of France, and city after city followed her example. Nor did it seem possible longer to hold Milan in subjection. That versatile state, after twice bending the neck to Louis, a second time grew weary of his government; and greedily listened to the proposal of the Pope to set upon the throne Massimiliano Sforza, son of their late Duke Ludovico. Full of this project the people of Milan rose simultaneously to avenge the cruelties of the French; the soldiers and merchants remain-

ing in the city were plundered, and about 1,500 put to the sword. The retreating army was harassed by the Lombards, and severely galled by the Swiss; and after encountering the greatest difficulties, the French crossed the Alps, having preserved none of their conquests in Lombardy except the citadel of Milan, and a few other fortresses. . . . At the close of the year, Massimiliano Sforza made his triumphal entry into Milan, with the most extravagant ebullitions of delight on the part of the people."—Sir R. Comyn, *Hist. of the Western Empire*, ch. 37 (v. 2).

MILANESE, OR MILANESS, The.—The district or duchy of Milan.

MILESIANS, Irish.—In Irish legendary history, the followers of Miled, who came from the north of Spain and were the last of the four races

which colonized Ireland.—T. Wright, *Hist. of Ireland*, bk. 1, ch. 2 (v. 1).—See IRELAND: THE PRIMITIVE INHABITANTS.

MILETUS.—Miletus, on the coast of Asia Minor, near its southwestern extremity, "with her four harbours, had been the earliest anchorage on the entire coast. Phenicians, Cretans, and Carians, had inaugurated her world-wide importance, and Attic families, endowed with eminent energy, had founded the city anew [see ASIA MINOR: THE GREEK COLONIES]. True, Miletus also had a rich territory of her own in her rear, viz., the broad valley of the Mæander, where among other rural pursuits particularly the breeding of sheep flourished. Miletus became the principal market for the finer sorts of wool; and the manufacture of this article into variegated tapestry and coloured stuffs for clothing employed a large multitude of human beings. But this industry also continued in an increasing measure to demand importation from without of all kinds of materials of art, articles of food, and slaves [see ASIA MINOR: B. C. 724-539]. In no city was agriculture made a consideration so secondary to industry and trade as here. At Miletus, the maritime trade even came to form a particular party among the citizens, the so-called 'Aeinautæ', the 'men never off the water.'—E. Curtius, *Hist. of Greece*, bk. 2, ch. 3 (v. 1).—Miletus took an early leading part in the great Ionian enterprises of colonization and trade, particularly in the Pontus, or Black Sea, where the Milesians succeeded the Phœnicians, establishing important commercial settlements at Sinope, Cyzicus and elsewhere. They were among the last of the Asiatic Ionians to succumb to the Lydian monarchy, and they were the first to revolt against the Persian domination, when that had taken the place of the Lydian. The great revolt failed and Miletus was practically destroyed [see PERSIA: B. C. 521-493]. Recovering some importance it was destroyed again by Alexander. Once more rising under the Roman empire, it was destroyed finally by the Turks and its very ruins have not been identified with certainty.

MILLENNIAL YEAR, The.—"It has often been stated that in the tenth century there was a universal belief that the end of the world was to happen in the year 1000 A. D. This representation has recently been subjected to a critical scrutiny by Eiken, Le Roy, and Orsi, and found to be an unwarrantable exaggeration. It would be still less applicable to any century earlier or later than the tenth. A conviction of the impending destruction of the world, however, was not uncommon at almost any period of the middle age. It is frequently found expressed."—R. MINIMS.—"Of the orders which arose in the 15th century, the most remarkable was that of Eremites [Hermits] of St. Francis, or Minims, founded . . . by St. Francis of Paola, and approved by Sixtus IV. in 1474." St. Francis, a Minorite friar of Calabria, was one of the devotees whom Louis XI. of France gathered about himself during his last days, in the hope that their intercessions might prolong his life. To propitiate him, Louis "founded convents at Plessis and at Amboise for the new religious society, the members of which, not content with the name of Minorites, desired to signify their profession of utter insignificance by styling themselves Minims."—J. C. Robertson, *Hist. of the Christian Church*, v. 8, pp. 369 and 224.

MINORCA: 13th Century.—Conquest by King James of Aragon. See SPAIN: A. D. 1212-1238.

A. D. 1708.—Acquisition by England.—In 1708, during the War of the Spanish Succession, Port Mahon, and the whole island of Minorca, were taken by an English expedition from Barcelona, under General Stanhope, who afterwards received a title from his conquest, becoming Viscount Stanhope of Mahon. Port Mahon was then

MINORCA.

considered the best harbor in the Mediterranean and its importance to England was rated above that of Gibraltar.—Earl Stanhope, *Hist. of Eng.: Reign of Queen Anne*, ch. 10.—See SPAIN: A. D. 1707-1710.—At the Peace of Utrecht Minorca was ceded to Great Britain and remained under the British flag during the greater part of the 18th century. See UTRECHT: A. D. 1712-1714.

A. D. 1756.—Taken by the French.—At the outbreak of the Seven Years War, in 1756, there was great dread in England of an immediate French invasion; and “the Government so thoroughly lost heart as to request the King to garrison England with Hanoverian troops. This dread was kept alive by a simulated collection of French troops in the north. But, under cover of this threat, a fleet was being collected at Toulon, with the real design of capturing Minorca. The ministry were at last roused to this danger, and Byng was despatched with ten sail of the line to prevent it. Three days after he set sail the Duke de Richelieu, with 16,000 men, slipped across into the island, and compelled General Blakeney, who was somewhat old and infirm, to withdraw into the castle of St. Philip, which was at once besieged. On the 19th of May—much too late to prevent the landing of Richelieu—Byng arrived within view of St. Philip, which was still in the possession of the English. The French Admiral, La Galissonnière, sailed out to cover the siege, and Byng, who apparently felt himself unequally matched—although West, his second in command, behaved with gallantry and success—called a council of war, and withdrew. Blakeney, who had defended his position with great bravery, had to surrender. The failure of Byng, and the general weakness and incapacity of the ministry, roused the temper of the people to rage; and Newcastle, trembling for himself, threw all the blame upon the Admiral, hoping by this means to satisfy the popular cry. . . . A court martial held upon that officer had been bound by strict instructions, and had found itself obliged to bring in a verdict of guilty, though without casting any imputation on the personal courage of the Admiral. On his accession to power Pitt was courageous enough, although he rested on the popular favour, to do his best to get Byng pardoned, and urged on the King that the House of Commons seemed to wish the sentence to be mitigated. The King is said to have answered in words that fairly describe Pitt's position, ‘Sir, you have taught me to look for the sense of my subjects in another place than the House of Commons.’ The sentence was carried out, and Byng was shot on the quarter-deck of the ‘Monarque’ at Portsmouth (March 14, 1757).”—J. F. Bright, *Hist. of Eng., period 3*, pp. 1021-1022.

MINYI, The.—“The race [among the Greeks] which . . . first issues forth with a history of its own from the dark background of the Pelasgian people is that of the Minyi. The cycle of their heroes includes Iason and Euneus, his son, who trades with Phœnicians and with Greeks. . . . The myths of the Argo were developed in the greatest completeness on the Pagasæan gulf, in the seats of the Minyi; and they are the first with whom a perceptible movement of the Pelasgian tribes beyond the sea—in other words, a Greek history in Europe—begins. The Minyi spread both by land and sea. They migrated southwards into the fertile fields of Bœotia, and settled on the southern side of the Copic valley by the sea. . . . After leaving the low southern coast they founded a new city at the western extremity of the Bœotian valley. There a long mountain ridge juts out from the direction of Parnassus, and round its farthest projection flows in a semicircle the Cephissus. At the lower edge of the height lies the village of Skripu. Ascending from its huts, one passes over primitive lines of wall to the peak of the mountain, only approachable by a rocky staircase of a hundred steps, and forming the summit of a castle. This is the second city of the Minyi in Bœotia, called Orchomenus: like the first, the most ancient walled royal seat which can be proved to have existed in Hellas, occupying a proud and commanding position over the valley by the sea. Only a little above the dirty huts of clay rises out of the depths of the soil the mighty block of marble, more than twenty feet high, which covered the entrance of a round building. The ancients called it the treasury of Minyas, in the vaults of which the ancient kings were believed to have hoarded the superfluity of their treasures of gold and silver, and in these remains endeavoured to recall to themselves the glory of Orchomenus sung by Homer.”—E. Curtius, *Hist. of Greece*, bk. 1, ch. 3 (v. 1).—See, also, BÆOTIA; and GREECE: THE MIGRATIONS.

MIR, The Russian.—“The ‘mir’ is a commune, whose bond is unity of autonomy and of possession of land. Sometimes the mir is a single village. In this case the economic administration adapts itself exactly to the civil. Again, it may happen that a large village is divided into many rural communes. Then each commune has its special economic administration, whilst the civil and police administration is common to all. Sometimes, lastly, a number of villages only have one mir. Thus the size of the mir may vary from 20 or 30 to some thousands of ‘dvors.’ . . . The ‘dvor,’ or court, is the economic unit: it contains one or several houses, and one or several married couples lodge in it. The ‘dvor’ has only one hedge and one gate in common for its inmates. . . . With the Great Russians the mir regulates even the ground that the houses stand on; the mir has the right to shift about the ‘dvors.’ . . . Besides land, the communes have property of another kind: fish-lakes, communal mills, a communal herd for the

improvement of oxen and horses; finally, store-houses, intended for the distribution to the peasants of seeds for their fields or food for their families. The enjoyment of all these various things must be distributed among the members of the commune, must be distributed regularly, equally, equitably. Thus, a fair distribution today will not be fair five or six years hence, because in some families the number of members will have increased, in others diminished. A new distribution, therefore, will be necessary to make the shares equal. For a long time this equalization can be brought about by partial sharings-up, by exchange of lots of ground between the private persons concerned, without upsetting everybody by a general redistribution. . . . The Russian mir is not an elementary unit. It is made up of several primordial cells—of small circles that form in perfect freedom. The mir only asks that the circles (osmaks) are equal as to labour-power. This condition fulfilled, I am free to choose my companions in accordance with my friendships or my interests. When the village has any work to do, any property to distribute, the administration or the assembly of the commune generally does not concern itself with individuals, but with the 'osmak'. . . . Each village has an administration; it is represented by a mayor (selski starosta), chosen by the mir. But this administration has to do only with affairs determined upon in principle by the communal assembly. The starosta has no right of initiating any measures of importance. Such questions (partition of the land, new taxes, leases of communal property, etc.) are only adjudicated and decided by the assembly of the mir. All the peasants living in the village come to the assembly, even the women. If, for example, the wife, by the death of her husband, is the head of the family, at the assembly she has the right to vote. . . . The peasants meet very frequently. . . . The assemblies are very lively, . . . courageous, independent."—L. Tikhomirov, *Russia, Political and Social*, bk. 3, ch. 2, with foot-note, ch. 1 (v. 1).

MISCHNA, The.—Rabbi Jehuda, the Patriarch at Tiberias, was the author (about A. D. 194) of "a new constitution to the Jewish people. He embodied in the celebrated Mischna, or Code of Traditional Law, all the authorized interpretations of the Mosaic Law, the traditions, the decisions of the learned, and the precedents of the courts or schools. . . . The sources from which the Mischna was derived may give a fair

view of the nature of the Rabbinical authority, and the manner in which it had superseded the original Mosaic Constitution. The Mischna was grounded, 1. On the Written Law of Moses. 2. On the Oral Law, received by Moses on Mount Sinai, and handed down, it was said, by uninterrupted tradition. 3. The decisions or maxims of the Wise Men. 4. Opinions of particular individuals, on which the schools were divided, and which still remained open. 5. Ancient usages and customs. The distribution of the Mischna affords a curious exemplification of the intimate manner in which the religious and civil duties of the Jews were interwoven, and of the authority assumed by the Law over every transaction of life. The Mischna commenced with rules for prayer, thanksgiving, ablutions; it is impossible to conceive the minuteness or subtlety of these rules, and the fine distinctions drawn by the Rabbins. It was a question whether a man who ate figs, grapes, and pomegranates, was to say one or three graces; . . . whether he should sweep the house and then wash his hands, or wash his hands and then sweep the house. But there are nobler words."—H. H. Milman, *Hist. of the Jews*, bk. 19.—See, also, TALMUD.

A. D. 1798-1804.—The Territory constituted and organized.—“The territory heretofore surrendered by the Spanish authorities, and lying north of the 31st degree of latitude, with the consent and approbation of the State of Georgia, was erected into a territory of the United States by act of Congress, approved April 7th, 1798, entitled ‘an act for the amicable settlement of limits with the State of Georgia, and authorizing the establishment of a government in the Mississippi Territory. The territory comprised in the new organization, or the original Mississippi Territory, embraced that portion of country between the Spanish line of demarkation and a line drawn due east from the mouth of the Yazoo to the Chattahoochy River. The Mississippi River was its western limit and the Chattahoochy its eastern. The organization of a territorial government by the United States was in no wise to impair the rights of Georgia to the soil, which was left open for future negotiation between the State of Georgia and the United States.” In 1802 the State of Georgia ceded to the United States all her claim to lands south of the State of Tennessee, stipulating to receive \$1,250,000 “out of the first nett proceeds of lands lying in said ceded territory.” In 1804 “the whole of the extensive territory ceded by Georgia, lying north of the Mississippi Territory, and south of Tennessee, was . . . annexed to the Mississippi Territory, and was subsequently included within its limits and jurisdiction. The boundaries of the Mississippi Territory, consequently, were the 31st degree on the south, and the 35th degree on the north, extending from the Mississippi River to the western limits of Georgia, and comprised the whole territory now embraced in the States of Alabama and Mississippi, excepting the small Florida District between the Pearl and Perdido Rivers. Four fifths of this extensive territory were in the possession of the four great southern Indian confederacies, the Choctas, the Chickasas, the Creeks, and the Cherokees, comprising an aggregate of about 75,000 souls, and at least 10,000 warriors. The only portions of this territory to which the Indian title had been extinguished was a narrow strip from 15 to 50 miles in width, on the east side of the Mississippi, and about 70 miles in length, and a small district on the Tombigby.”—J. W. Monette, *Discovery and Settlement of the Valley of the Mississippi*, bk. 5, ch. 13 (v. 2).

A. D. 1861 (February—July).—The baffling of the Secessionists.—Blair, Lyon and the Home Guards of St. Louis.—The capture of Camp Jackson.—Battle of Boonville.—A loyal State Government organized.—The seizure of arsenals and arms by the secessionists of the Atlantic and Gulf States “naturally directed the attention of the leaders of the different political parties in Missouri to the arsenal in St. Louis, and set them to work planning how they might get control of the 40,000 muskets and other munitions of war which it was known to contain. . . . Satisfied that movements were on foot among irresponsible parties, Unionist as well as Secessionist, to take possession of this post, General D. M. Frost, of the Missouri state militia, a graduate of West Point and a thorough soldier, is said to have called Governor Jackson's attention to the necessity of ‘looking after’ it. . . . Jackson, however, needed no prompting. . . . He did not hesitate to give Frost authority to seize the arsenal, whenever in his judgment it might become necessary to do so. Meanwhile he was to assist in protecting it against mob violence of any kind or from any source. . . . Frost, however, was not the only person in St. Louis who had his eyes fixed upon the arsenal and its contents. Frank Blair was looking longingly in the same direction, and was already busily engaged in organizing the bands which, supplied with guns from this very storehouse, enabled

him, some four months later, to lay such a heavy hand upon Missouri. Just then, it is true, he could not arm them, . . . but he did not permit this to interfere with the work of recruiting and drilling. That went on steadily, and as a consequence, when the moment came for action, Blair was able to appear at the decisive point with a well-armed force, ten times as numerous as that which his opponents could bring against him. In the mean time, whilst these two, or rather three, parties (for Frost can hardly be termed a secessionist, though as an officer in the service of the State he was willing to obey the orders of his commander) were watching each other, the federal government awoke from its lethargy, and began to concentrate troops in St. Louis for the protection of its property. . . . By the 18th of February, the day of the election of delegates to the convention which pronounced so decidedly against secession, there were between four and five hundred men behind the arsenal walls. . . . General Harney, who was in command of the department and presumably familiar with its condition, under date of February 19, notified the authorities at Washington that there was no danger of an attack, and never had been. . . . Such was not the opinion of Captain Nathaniel Lyon, who had arrived at the arsenal on the 6th of February, and who was destined, in the short space of the coming six months, to write his name indelibly in the history of the State. . . . Under the stimulating influence of two such spirits as Blair and . . . [Lyon] the work of preparation went bravely on. By the middle of April, four regiments had been enlisted, and Lyon, who was now in command of the arsenal, though not of the department, proceeded to arm them in accordance with an order which Blair had procured from Washington. Backed by this force, Blair felt strong enough to set up an opposition to the state government, and accordingly, when Jackson refused to furnish the quota of troops assigned to Missouri under President Lincoln's call of April 15, 1861 [see UNITED STATES OF AM.: A. D. 1861 (APRIL)], he telegraphed to Washington that if an order to muster the men into the service was sent to Captain Lyon ‘the requisition would be filled in two days.’ The order was duly forwarded, and five regiments having been sworn in instead of four, as called for, Blair was offered the command. This he declined, and, on his recommendation, Lyon was elected in his place. On the 7th and 8th of May another brigade was organized. . . . This made ten regiments of volunteers, besides several companies of regulars and a battery of artillery, that were now ready for service; and as General Harney, whose relatives and associates were suspected of disloyalty, had been ordered to Washington to explain his position, Lyon was virtually in command of the department. . . . Jackson, . . . though possessed of but little actual power, was unwilling to give up the contest without an effort. He did not accept the decision of the February election as final. . . . Repairing to St. Louis, as soon as the adjournment of the General Assembly had left him free, he began at once, in conjunction with certain leading secessionists, to concert measures for arming the militia of the State. . . . To this end, the seizure of the arsenal was held to be a prerequisite, and General Frost was preparing a memorial showing

how this could best be done, when the surrender of Fort Sumter and the President's consequent call for troops hurried Jackson into a position of antagonism to the federal government. . . . He sent messengers to the Confederate authorities at Montgomery, Alabama, asking them to supply him with the guns that were needed for the proposed attack on the arsenal; and he summoned the General Assembly to meet at Jefferson City on the 2d of May, to deliberate upon such measures as might be deemed necessary for placing the State in a position to defend herself. He also ordered, as he was authorized to do under the law, the commanders of the several military districts to hold the regular yearly encampments for the purpose of instructing their men in drill and discipline. . . . Practically its effect was limited to the first or Frost's brigade, as that was the only one that had been organized under the law. On the 3d of May, this little band, numbering less than 700 men, pitched their tents in a wooded valley in the outskirts of the city of St. Louis, and named it Camp Jackson, in honor of the governor. It is described as being surrounded on all sides, at short range, by commanding hills; it was, moreover, open to a charge of cavalry in any and every direction, and the men were supplied with but five rounds of ammunition each, hardly enough for guard purposes. In a word, it was defenseless, and this fact is believed to be conclusive in regard to the peaceful character of the camp as it was organized. . . . Lyon . . . announced his intention of seizing the entire force at the camp, without any ceremony other than a demand for its surrender. . . . Putting his troops in motion early in the morning of the 10th of May, he surrounded Camp Jackson and demanded its surrender. As Frost could make no defense against the overwhelming odds brought against him, he was of course obliged to comply; and his men, having been disarmed, were marched to the arsenal, where they were paroled. . . . After the surrender, and whilst the prisoners were standing in line, waiting for the order to march, a crowd of men, women and children collected and began to abuse the home guards, attacking them with stones and other missiles. It is even said that several shots were fired at them, but this lacks confirmation. According to Frost, who was at the head of the column of prisoners, the first intimation of firing was given by a single shot, followed almost immediately by volley firing, which is said to have been executed with precision considering the rawness of the troops. When the fusillade was checked, it was found that 28 persons had been killed or mortally wounded, among whom were three of the prisoners, two women, and one child. . . . Judging this action by the reasons assigned for it, and by its effect throughout the State, it must be pronounced a blunder. So far from intimidating the secessionists, it served only to exasperate them; and it drove not a few Union men, among them General Sterling Price, into the ranks of the opposition and ultimately into the Confederate army."—L. Carr, *Missouri*, ch. 14.—When news of the capture of Camp Jackson reached Jefferson City, where the legislature was in session, Governor Jackson at once ordered a bridge on the railroad from St. Louis to be destroyed, and the legislature made haste to pass several bills in the interest of the rebellion, including one which placed the whole

military power of the State in the hands of the Governor. Armed with this authority, Jackson proceeded to organize the Militia of Missouri as a secession army. Meantime Captain Lyon had been superseded in command by the arrival at St. Louis of General Harney, and the latter introduced a total change of policy at once. He was trapped into an agreement with Governor Jackson and Sterling Price, now general-in-chief of the Missouri forces, which tied his hands, while the cunning rebel leaders were rapidly placing the State in active insurrection. But the eyes of the authorities at Washington were opened by Blair; Harney was soon displaced and Lyon restored to command. This occurred May 30th. On the 15th of June Lyon took possession of the capital of the State, Jefferson City, the Governor and other State officers taking flight to Boonville, where their forces were being gathered. Lyon promptly followed, routing and dispersing them at Boonville on the 17th. The State Convention which had taken a recess in March was now called together by a committee that had been empowered to do so before the convention separated, and a provisional State government was organized (July 31) with a loyal governor, Hamilton R. Gamble, at its head.—J. G. Nicolay, *The Outbreak of the Rebellion*, ch. 10.

MITHRIDATIC WARS, The.—A somewhat vaguely defined part of eastern Asia Minor, between Armenia, Phrygia, Cilicia and the Euxine, was called Cappadocia in times anterior to 363 B. C. Like its neighbors, it had fallen under the rule of the Persians and formed a province of their empire, ruled by hereditary satraps. In the year above named, the then reigning satrap, Ariobarzanes, rebelled and made himself king of the northern coast district of Cappadocia, while the southern and inland part was retained under Persian rule. The kingdom founded by Ariobarzanes took the name of Pontus, from the sea on which it bordered. It was reduced to submission by Alexander the Great, but regained independence during the wars between Alexander's successors (see MACEDONIA: B. C. 310-301; and SELEUCIDÆ: B. C. 281-224), and extended its limits towards the west and south. The kingdom of Pontus, however, only rose to importance in history under the powerful sovereignty of Mithridates V. who took the title of Eupator and is often called Mithridates the Great. He ascended the throne while a child, B. C. 120, but received, notwithstanding, a wonderful education and training. At the age of twenty (B. C. 112) he entered upon a career of conquest, which was intended to strengthen his power for the struggle with Rome, which he saw to be inevitable. Within a period of about seven years he extended his dominions around the nearly complete circuit of the Euxine, through Armenia, Colchis, and along the northern coasts westward to the Crimea and the Dniester; while at the same time he formed alliances with the barbarous tribes on the Danube, with which he hoped to threaten Italy.—G. Rawlinson, *Manual of Ancient Hist.*, bk. 4, period 3, pt. 4.—“He [Mithridates] rivalled Hannibal in his unquenchable hatred to Rome. This hatred had its origin in the revocation of a district of Phrygia which the Senate had granted to his father. . . . To his banner clustered a quarter of a million of the fierce warriors of the Caucasus and the Scythian steppes and of his own Hellenized Pontic soldiers; Greek captains, in whom he had a confidence unshaken by disaster—Archelaus, Neoptolemus, Dorilaus—gave tactical strength to his forces. He was allied, too, with the Armenian king, Tigranes; and he now turned his thoughts to Numidia, Syria, and Egypt with the intention of forming a coalition against his foe on the Tiber. A coin has been found which commemorated an alliance proposed between the Pontic king and the Italian rebels. . . . The imperious folly of M. Aquilius, the Roman envoy in the East, precipitated the intentions of the king; instead of contending for the principedom of Bithynia and Cappadocia, he suddenly appealed to the disaffected in the Roman province. The fierce white fire of Asiatic hate shot out simultaneously through the length and breadth of the country [B. C. 88]; and the awful news came to distracted Rome

that 80,000 Italians had fallen victims to the vengeance of the provincials. Terror-stricken publicani were chased from Adramyttium and Ephesus into the sea, their only refuge, and there cut down by their pursuers; the Mæander was rolling along the corpses of the Italians of Tralles; in Caria the refined cruelty of the oppressed people was butchering the children before the eyes of father and mother, then the mother before the eyes of her husband, and giving to the man death as the crown and the relief of his torture. . . . Asia was lost to Rome; only Rhodes, which had retained her independence, remained faithful to her great ally. The Pontic fleet, under Archelaus, appeared at Delos, and carried thence 2,000 talents to Athens, offering to that imperial city the government of her ancient tributary. This politic measure awakened hopes of independence in Greece. Aristion, an Epicurean philosopher, seized the reins of power in Athens, and Archelaus repaired the crumbling battlements of the Piræus. The wave of eastern conquest was rolling on towards Italy itself. The proconsul Sulla marched to Brundisium, and, undeterred by the ominous news that his consular colleague, Q. Rufus, had been murdered in Picenum, or by the sinister attitude of the new consul Cinna, he crossed over to Greece with five legions to stem the advancing wave. History knows no more magnificent illustration of cool, self-restrained determination than the action of Sulla during these three years.” He left Rome to his enemies, the fierce faction of Marius, who were prompt to seize the city and to fill it with “wailing for the dead, or with the more terrible silence which followed a complete massacre” [see ROME: B. C. 88-78]. “The news of this carnival of democracy reached the camp of Sulla along with innumerable noble fugitives who had escaped the Marian terror. The proconsul was unmoved; with unexampled self-confidence he began to assume that he and his constituted Rome, while the Forum and Curia were filled with lawless anarchists, who would soon have to be dealt with. He carried Athens by assault, and slew the whole population, with their tyrant Aristion [see ATHENS: B. C. 87-86], but he counted it among the favours of the goddess of Fortune that he, man of culture as he was, was able to save the immemorial buildings of the city from the fate of Syracuse or Corinth. Archelaus, in Piræus, offered the most heroic resistance. . . . With the spring Sulla heard of the approach of the main army from Pontus, under the command of Taxiles. 120,000 men, and ninety scythed chariots, were pouring over Mount Ceta to overwhelm him. With wonderful rapidity he marched northwards through friendly Thebes, and drew up his little army on a slope near Chæroneæ, digging trenches on his left and right to save his flank from being turned. He showed himself every inch a general, he compelled the enemy to meet him on this ground of his own choice, and the day did not close before 110,000 of the enemy were captured or slain, and the camp of Archelaus, who had hastened from Athens to take the command, was carried by assault. We have before us still, in the pages of Plutarch, Sulla's own memoirs. If we may believe him, he lost only fifteen men in the battle. By this brilliant engagement he had restored Greece to her allegiance, and, what was even better, the

disaster aroused all the savagery of Mithradates, the Greek vanished in the oriental despot. Suspicious and ruthless, he ordered his nearest friends to be assassinated; he transported all the population of Chios to the mainland, and by his violence and exaction stirred Ephesus, Sardes, Tralles, and many other cities, to renounce his control, and to return to the Roman government. Still, he did not suspect Archelaus, but appointed him, together with Dorilaus, to lead a new army into Greece. The new army appeared in Bœotia, and encamped by the Copaic Lake, near Orchomenos. Before the raw levies could become familiar with the sight of the legions, Sulla assaulted the camp [B. C. 85], and rallied his wavering men by leading them in person with the cry, 'Go, tell them in Rome that you left your general in the trenches of Orchomenos; the self-consciousness was sublime, for nothing would have pleased the people in Rome better; his victory was complete, and Archelaus escaped alone in a boat to Calchis. As the conqueror returned from the battle-field to reorganize Greece, he learnt that the Senate had deposed him from command, declared him an outlaw, and appointed as his successor the consul L. Valerius Flaccus. The disorganization of the republic seemed to have reached a climax. Flaccus conducted his army straight to the Bosphorus without venturing to approach the rebel proconsul Sulla; while Mithradates, who began to wish for peace, preferred to negotiate with his conqueror rather than with the consul of the republic. To complete this complication of anarchy, Flaccus was murdered, and superseded in the command by his own legate, C. Flavius Fimbria; this choice of their general by the legions themselves might seem significant if anything could be significant or connected in such a chaos. But Sulla now crossed into Asia, and concluded peace with Mithradates on these conditions: The king was to relinquish all his conquests, surrender deserters, restore the people of Chios, pay 2,000 talents, and give up seventy of his ships. Fimbria . . . remained to be dealt with. It was not a difficult matter: the two Roman armies confronted one another at Thyatira, and the Fimbrians streamed over to Sulla. After all, the legionaries, who had long ceased to be citizens, were soldiers first and politicians after; they worshipped the felicity of the great general; and the democratic general had not yet appeared who could bind his men to him by a spell stronger than Sulla's. Fimbria persuaded a slave to thrust him through with his sword. His enemies were vanquished in Asia, but in Rome Cinna was again consul (85 B. C.), and his colleague, Cn. Papirius Carbo, out-Cinnaed Cinna. Yet Sulla was in no hurry. He spent more than a year in reorganizing the disordered province. . . . He even allowed Cinna and Carbo, who began to prepare for war with him (84 B. C.), to be re-elected to the consulship; but when the more cautious party in the Senate entered into negotiations with him, and offered him a safe conduct to Italy, he showed in a word what he took to be the nature of the situation by saying that he was not in need of their safe conduct, but he was coming to secure them."—R. F. Horton, *Hist. of the Romans*, ch. 26.—Plutarch, *Sulla*.—After a second and a third war with Rome (see **ROME**: B. C. 78-68, and 69-63), Mithradates was finally (B. C. 65) driven

from his old dominions into the Crimean kingdom of Bosphorus, where he ended his life in despair two years later. The kingdom of Pontus was absorbed in the Roman empire. The southern part of Cappadocia held some rank as an independent kingdom until A. D. 17, when it was likewise reduced to the state of a Roman province.

MOABITES, The.—The Moabite Stone.—As related in the Bible (Gen. xix. 37), Moab was the son of Lot's eldest daughter and the ancient people called Moabites were descended from him. They occupied at an early time the rich tableland or highlands on the east side of the Dead Sea; but the Amorites drove them out of the richer northern part of this territory into its southern half, where they occupied a very narrow domain, but one easily defended. This occurred shortly before the coming of the Israelites into Canaan. Between the Moabites and the Israelites, after the settlement of the latter, there was frequent war, but sometimes relations both peaceful and friendly. David finally subjugated their nation, in a war of peculiar atrocity. After the division of the kingdoms, Moab was subject to Israel, but revolted on the death of Ahab and was nearly destroyed in the horrible war which followed. The Biblical account of this war is given in 2 Kings III. It is strangely supplemented and filled out by a Moabite record—the famous Moabite Stone—found and deciphered within quite recent times, under the following circumstance. Dr. Klein, a German missionary, travelling in 1869 in what was formerly the "Land of Moab," discovered a stone of black basalt bearing a long inscription in Phœnician characters. He copied a small part of it and made his discovery known. The Prussian government opened negotiations for the purchase of the stone, and M. Clermont-Ganneau, of the French consulate at Jerusalem, made efforts likewise to secure it for his own country. Meantime, very fortunately, the latter sent men to take impressions—squeezes, as they are called—of the inscription, which was imperfectly done. But these imperfect squeezes proved invaluable; for the Arabs, finding the stone to be a covetable thing, and fearing that it was to be taken from them, crumbled it into fragments with the aid of fire and water. Most of the pieces were subsequently recovered, and were put together by the help of M. Clermont-Ganneau's squeezes, so that an important part of the inscription was deciphered in the end. It was found to be a record by Mesha, king of Moab, of the war with Israel referred to above.—A. H. Sayce, *Fresh Light from the*

MOERIS, Lake.—“On the west of Egypt there is an oasis of cultivable land, the Fayum, buried in the midst of the desert, and attached by a sort of isthmus to the country watered by the Nile. In the centre of this oasis is a large plateau about the same level as the valley of the Nile; to the west, however, a considerable depression of the land produces a valley occupied by a natural lake more than ten leagues in length, the ‘Birket Kerun.’ In the centre of this plateau Amenemhe [twelfth dynasty] undertook the formation of an artificial lake with an area of ten

millions of square metres. If the rise of the Nile was insufficient, the water was led into the lake and stored up for use, not only in the Fayum, but over the whole of the left bank of the Nile as far as the sea. If too large an inundation threatened the dykes, the vast reservoir of the artificial lake remained open, and when the lake itself overflowed, the surplus waters were led by a canal into the Birket Kerun. The two names given in Egypt to this admirable work of Amenemhe III. deserve to be recorded. Of one, Meri, that is ‘the Lake,’ par excellence, the Greeks have made Moeris, a name erroneously applied by them to a king; whilst the other, P-lom, ‘the Sea,’ has become, in the mouth of the Arabs, the name of the entire province, Fayum.”—M. Mariette, quoted in Lenormant's *Manual of Ancient Hist. of the East*, bk. 3, ch. 2.

MŒSIA, OR MÆSIA.—“After the Danube had received the waters of the Teyss [Theiss] and the Save, it acquired, at least among the Greeks, the name of Ister. It formerly divided Mœsia and Dacia, the latter of which, as we have already seen, was a conquest of Trajan, and the only province beyond the river. . . . On the right hand of the Danube, Mœsia, . . . during the middle ages, was broken into the barbarian kingdoms of Servia and Bulgaria.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 1.—Mœsia was occupied by the Goths in the 4th century. See GOTHs: A. D. 341-381; and 376.

MOGONTIACUM.—“The two headquarters of the [Roman] army of the Rhine were always Vetera, near Wesel, and Mogontiacum, the modern Mentz. . . . Mogontiacum or Mentz, [was] from the time of Drusus down to the end of Rome the stronghold out of which the Romans sallied to attack Germany from Gaul, as it is at the present day the true barrier of Germany against France. Here the Romans, even after they had abandoned their rule in the region of the upper Rhine generally, retained not merely the tête-de-pont on the other bank, the ‘castellum Mogontiense’ (Castel), but also that plain of the Main itself, in their possession; and in this region a Roman civilisation might establish itself. The land originally belonged to the Chatti, and a Chattan tribe, the Mattiaci, remained settled here even under Roman rule.”—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 4 (*The Provinces*, v. 1).

MOHOCKS, The.—After the Stuart restoration it became the fashion in London for dissolute young men to form themselves into Clubs and Associations for committing all sorts of excesses in the public streets. "These Clubs took various slang designations. At the Restoration they were 'Mums,' and 'Tityre-tus.' They were succeeded by the 'Hectors' and 'Scourers.' . . . Then came the 'Nickers,' whose delight it was to smash windows with showers of half-pence; next were the 'Hawkabites;' and lastly the 'Mohocks.' These last are described in the 'Spectator,' No. 324, as a set of men who . . . took care to drink themselves to a pitch beyond reason or humanity, and then made a general sally, and attacked all who were in the streets. Some were knocked down, others stabbed, and others cut and carbonadoed. . . . They had special barbarities which they executed upon their prisoners. 'Tipping the lion' was squeezing the nose flat to the face and boring out the eyes with their fingers. 'Dancing-masters' were those who taught their scholars to cut capers by running swords through their legs. The 'Tumblers' set women on their heads. The 'Sweaters' worked in parties of half-a-dozen, surrounding their victims with the points of their swords. . . . Another savage diversion of the Mohocks was their thrusting women into barrels, and rolling them down Snow or Ludgate Hill. . . . At length the villainies of the Mohocks were attempted to be put down by a Royal proclamation, issued on the 18th of March, 1712: this, however, had very little effect, for we soon find Swift exclaiming: 'They go on still and cut people's faces every night!' . . . The Mohocks held together until nearly the end of the reign of George I."—J. Timbs, *Clubs and Club Life in London*, pp. 33-38.

MOLUCCAS, The. The general name of the Moluccas, or Spice Islands, covers an extensive group between Celebes and New Guinea, the more important of which are Gilolo or Illamheira, Buru, Ceram or Serang, Ternate, Banda, and Amboyna. Nutmeg, clove and cardamom are the products which made the islands famous long before their whereabouts were discovered by the Portuguese in 1511. The Portuguese were expelled by the natives in 1583; but the Dutch came on the scene in 1613 and mastered the entire dominions of the sultans of Ternate and Tidore, who had been rulers of the whole group, as well as of Mindanao and northwestern New Guinea. The Dutch destroyed the spice trees in most of the islands, to limit and control the production, making Banda the seat of nutmeg culture and Amboyna that of the clove. — See, also, **MALAY ARCHIPELAGO.**

MONA.—The ancient name of the island of Anglesea, the final seat of the Druidical religion in Britain. Taken by the Romans, A. D. 61, the priests were slain, the sacred groves destroyed and Druidism practically exterminated.

MONACANS, The. See **AMERICAN ABORIGINES: POWHATAN CONFEDERACY, and IROQUOIS TRIBES OF THE SOUTH.**

MONACO.—Monaco, the smallest independent state in Europe, having an area of only 8 square miles, is on the Mediterranean, about 9 miles east of Nice, surrounded by French territory. It has been a principality of the Grimaldi family for centuries. Monte Carlo, one of its three small towns, is the greatest gambling centre in Europe.

MONAPIA.—Roman name of the Isle of Man.

MONASTERY.—CONVENT.—ABBEY.—PRIORY.—"Monasticism was not the product of Christianity; it was the inheritance of the Church. . . . The Essenes, the Therapeutæ, and other Oriental mystics, were as truly the precursors of Christian asceticism in the desert or in the cloister, as Elijah and St. John the Baptist. The Neoplatonism of Alexandria, extolling the passionless man above him who regulates his passions, sanctioned and systematized this craving after a life of utter abstraction from external things, this abhorrence of all contact with what is material as a defilement. • Doubtless the cherished remembrance of the martyrs and confessors, who in the preceding centuries of the Christian era had triumphed over many a sanguinary persecution, gave a fresh impulse in the fourth century to this propensity to asceticism, stimulating the devout to vie with their forefathers in the faith by their voluntary endurance of self-inflicted austerities. . . . The terms monastery, originally the cell or cave of a solitary, laura, an irregular cluster of cells, and cœnobium, an association of monks, few or many, under one roof and under one control, mark the three earliest stages in the development of monasticism. In Syria and Palestine each monk originally had a separate cell; in Lower Egypt two were together in one cell,

whence the term 'syncellita,' or sharer of the cell, came to express this sort of comradeship; in the Thebaid, under Pachomius of Tabenna, each cell contained three monks. At a later period the monks arrogated to themselves by general consent the title of 'the religious,' and admission into a monastery was termed 'conversion' to God. . . . The history of monasticism, like the history of states and institutions in general, divides itself broadly into three great periods, of growth, of glory, and of decay. . . . From the beginning of the fourth century to the close of the fifth, from Antony the hermit to Benedict of Monte Casino, is the age of undisciplined impulse of enthusiasm not as yet regulated by experience. . . . Everything is on a scale of illogical exaggeration, is wanting in balance, in proportion, in symmetry. Because purity, unworldliness, charity, are virtues, therefore a woman is to be regarded as a venomous reptile, gold as a worthless pebble; the deadliest foe and the dearest friend are to be esteemed just alike. Because it is right to be humble, therefore the monk cuts off hand, ear, or tongue, to avoid being made bishop, and feigns idiocy, in order not to be accounted wise. Because it is well to teach people to be patient, therefore a sick monk never speaks a kind word for years to the brother monk who nursed him. Because it is right to keep the lips from idle words, therefore a monk holds a large stone in his mouth for three years. Every precept is to be taken literally, and obeyed unreasoningly. Therefore monks who have been plundered by a robber run after him to give him a something which has escaped his notice. Self-denial is enjoined in the gospel. Therefore the austerities of asceticism are to be simply endless. One ascetic makes his dwelling in a hollow tree, another in a cave, another in a tomb, another on the top of a pillar, another has so lost the very appearance of a man, that he is shot at by shepherds, who mistake him for a wolf. The natural instincts, instead of being trained and cultivated, are to be killed outright, in this abhorrence of things material. . . . The period which follows, from the first Benedict to Charlemagne, exhibits monasticism in a more mature stage of activity. The social intercourse of the monastery, duly harmonized by a traditional routine, with its subordination of rank and offices, its division of duties, its mutual dependence of all on each other, and on their head, civilized the monastic life; and, as the monk himself became subject to the refining influences of civilization, he went forth into the world to civilize others. . . . Had it not been for monks and monasteries, the barbarian deluge might have swept away utterly the traces of Roman civilization. The Benedictine monk was the pioneer of civilization and Christianity in England, Germany, Poland, Bohemia, Sweden, Denmark. The schools attached to the Lerinsian monasteries were the precursors of the Benedictine seminaries in France and of the professional chairs filled by learned Benedictines in the universities of mediæval Christendom. With the incessant din of arms around him, it was the monk in his cloister, even in regions beyond the immediate sphere of Benedict's legislation, even in the remote fastnesses, for instance of Mount Athos, who, by preserving and transcribing ancient manuscripts, both Christian and pagan, as well as by recording his observations of contemporaneous events, was hand-

ing down the torch of knowledge unquenched to future generations, and hoarding up stores of erudition for the researches of a more enlightened age. The first musicians, painters, farmers, statesmen, in Europe, after the downfall of Imperial Rome under the onslaught of the barbarians, were monks."—I. Gregory Smith, *Christian Monasticism*, introd.—"The monastic stream, which had been born in the deserts of Egypt, divided itself into two great arms. The one spread in the East, at first inundated everything, then concentrated and lost itself there. The other escaped into the West, and spread itself by a thousand channels over an entire world which had to be covered and fertilised." Athanasius, who was driven twice by persecution to take refuge among the hermits in the Thebaid, Egypt, and who was three times exiled by an imperial order to the West, "became thus the natural link between the Fathers of the desert and those vast regions which their successors were to conquer and transform. . . . It was in 340 that he came for the first time to Rome, in order to escape the violence of the Arians, and invoke the protection of Pope Julius. . . . He spread in Rome the first report of the life led by the monks in the Thebaid, of the marvellous exploits of Anthony, who was still alive, of the immense foundations which Pacome was at that time forming upon the banks of the higher Nile. He had brought with him two of the most austere of these monks. . . . The narratives of Athanasius . . . roused the hearts and imaginations of the Romans, and especially of the Roman women. The name of monk, to which popular prejudice seems already to have attached a kind of ignominy, became immediately an honoured and envied title. The impression produced at first by the exhortations of the illustrious exile, was extended and strengthened during the two other visits which he made to the Eternal City. Some time afterwards, on the death of St Anthony, Athanasius, at the request of his disciples, wrote the life of the patriarch of the Thebaid; and this biography, circulating through all the West, immediately acquired there the popularity of a legend, and the authority of a confession of faith. . . . Under this narrative form, says St Gregory of Nazianzus, he promulgated the laws of monastic life. The town and environs of Rome were soon full of monasteries, rapidly occupied by men distinguished alike by birth, fortune and knowledge, who lived there in charity, sanctity, and freedom. From Rome the new institution, already distinguished by the name of religion, or religious life, par excellence, extended itself over all Italy. It was planted at the foot of the Alps by the influence of a great bishop, Eusebius of Vercelli. . . . From the continent the new institution rapidly gained the Isles of the Mediterranean, and even the rugged rocks of the Gargon and of Capraja, where the monks, voluntarily exiled from the world, went to take the place of the criminals and political victims whom the emperors had been accustomed to banish thither. . . . Most of the great leaders of the cenobitical institution had, since St Pacome, made out, under the name of Rule, instructions and constitutions for the use of their immediate disciples; but none of these works had acquired an extensive or lasting sway. In the East, it is true, the rule of St Basil had prevailed in a multitude of monasteries, yet notwithstanding

Cassianus, in visiting Egypt, Palestine, and Mesopotamia, found there almost as many different rules as there were monasteries. In the West the diversity was still more strange. Each man made for himself his own rule and discipline, taking his authority from the writings or example of the Eastern Fathers. The Gauls especially exclaimed against the extreme rigour of the fasts and abstinences, which might be suitable under a fervid sky like that of Egypt or Syria, but which could not be endured by what they already called Gallican weakness; and even in the initial fervour of the monasteries of the Jura, they had succeeded in imposing a necessary medium upon their chiefs. Here it was the changing will of an abbot; there a written rule; elsewhere, the traditions of the elders, which determined the order of conventual life. In some houses various rules were practised at the same time, according to the inclination of the inhabitants of each cell, and were changed according to the times and places. They passed thus from excessive austerity to laxness, and conversely, according to the liking of each. Uncertainty and instability were everywhere. . . . A general arrangement was precisely what was most wanting in monastic life. There were an immense number of monks; there had been among them saints and illustrious men; but to speak truly, the monastic order had still no existence. Even where the rule of St Basil had acquired the necessary degree of establishment and authority—that is to say, in a considerable portion of the East—the gift of fertility was denied to it. . . . In the West also, towards the end of the fifth century, the cenobitical institution seemed to have fallen into the torpor and sterility of the East. After St Jerome, who died in 420, and St Augustine, who died in 430, after the Fathers of Lerins, whose splendour paled towards 450, there was a kind of eclipse. . . . Except in Ireland and Gaul, where, in most of the provinces, some new foundations rose, a general interruption was observable in the extension of the institution. . . . If this eclipse had lasted, the history of the monks of the West would only have been, like that of the Eastern monks, a sublime but brief passage in the annals of the Church, instead of being their longest and best-filled page. This was not to be: but to keep the promises which the monastic order had made to the Church and to the new-born Christendom, it needed, at the beginning of the sixth century, a new and energetic impulse, such as would concentrate and discipline so many scattered, irregular, and intermittent forces; a uniform and universally accepted rule; a legislator inspired by the fertile and glorious past, to establish and govern the future. God provided for that necessity by sending St Benedict into the world.”—Count de Montalembert, *The Monks of the West*, v. 1, pp. 381–387 and 512–515.—“The very word monastery is a misnomer: the word is a Greek word, and means the dwelling-place of a solitary person, living in seclusion. . . . In the 13th century . . . a monastery meant what we now understand it to mean—viz., the abode of a society of men or women who lived together in common—who were supposed to partake of common meals; to sleep together in one common dormitory; to attend certain services together in their common church; to transact certain business or pursue certain employments in the sight and hearing of

each other in the common cloister; and, when the end came, to be laid side by side in the common graveyard, where in theory none but members of the order could find a resting-place for their bones. When I say ‘societies of men and women’ I am again reminded that the other term, ‘convent,’ has somehow got to be used commonly in a mistaken sense. People use the word as if it signified a religious house tenanted exclusively by women. The truth is that a convent is nothing more than a Latin name for an association of persons who have come together with a view to live for a common object and to submit to certain rules in the ordering of their daily lives. The monastery was the common dwelling-place; the convent was the society of persons inhabiting it; and the ordinary formula used when a body of monks or nuns execute any corporate act—such as buying or selling land—by any legal instrument is, ‘The Prior and Convent of the Monastery of the Holy Trinity at Norwich;’ ‘the Abbot and Convent of the Monastery of St. Peter’s, Westminster;’ ‘the Abbess and Convent of the Monastery of St. Mary and St. Bernard at Lacock,’ and so on. . . . A monastery in theory then was, as it was called, a Religious House. It was supposed to be the home of people whose lives were passed in the worship of God, and in taking care of their own souls, and making themselves fit for a better world than this hereafter. . . . The church of a monastery was the heart of the place. It was not that the church was built for the monastery, but the monastery existed for the church. . . . Almost as essential to the idea of a monastery as the church was the cloister or great quadrangle, inclosed on all sides by the high walls of the monastic buildings. . . . All round this quadrangle ran a covered arcade, whose roof, leaning against the high walls, was supported on the inner side by an open trellis work in stone—often exhibiting great beauty of design and workmanship—through which light and air was admitted into the arcade. . . . The cloister was really the living place of the monks. Here they pursued their daily avocations, here they taught their school. . . . ‘But surely a monk always lived in a cell, didn’t he?’ The sooner we get rid of that delusion the better. Be it understood that until Henry II. founded the Carthusian Abbey of Witham, in 1178, there was no such thing known in England as a monk’s cell, as we understand the term. It was a peculiarity of the Carthusian order, and when it was first introduced it was regarded as a startling novelty for any privacy or anything approaching solitude to be tolerated in a monastery. The Carthusian system never found much favour in England. . . . At the time of the Norman Conquest it may be said that all English monks were professedly under one and the same Rule—the famous Benedictine Rule. The Rule of a monastery was the constitution or code of laws, which regulated the discipline of the house, and the Rule of St. Benedict dates back as far as the 6th century, though it was not introduced into England for more than 100 years after it had been adopted elsewhere. . . . About 150 years before the Conquest, a great reformation had been attempted of the French monasteries, . . . the reformers breaking away from the old Benedictines and subjecting themselves to a new and improved Rule. These first reformers were called Cluniac monks, from

the great Abbey of Clugni, in Burgundy, in which the new order of things had begun. The first English house of reformed or Clunia monks was founded at Lewes, in Sussex, 11 years after the Conquest. . . . The constitution of every convent, great or small, was monarchical. The head of the house was almost an absolute sovereign, and was called the Abbot. His dominions often extended, even in England, over a very wide tract of country, and sometimes over several minor monasteries which were called Cells. . . . The heads of these cells or subject houses were called Priors. An Abbey was a monastery which was independent. A priory was a monastery which in theory or in fact was subject to an abbey. All the Clunia monasteries in England were thus said to be alien priories, because they were mere cells of the great Abbey of Clugni in France, to which each priory paid heavy tribute." —A. Jessopp, *The Coming of the Friars*, ch. 3.

MONEY AND BANKING.

Nature and Origin of Money.—"When the division of labour has been once thoroughly established, it is but a very small part of a man's wants which the produce of his own labour can supply. He supplies the far greater part of them by exchanging that surplus part of the produce of his own labour, which is over and above his own consumption, for such parts of the produce of other men's labour as he has occasion for. Every man thus lives by exchanging, or becomes in some measure a merchant, and the society itself grows to be what is properly a commercial society. But when the division of labour first began to take place, this power of exchanging must frequently have been very much clogged and embarrassed in its operations. One man, we shall suppose, has more of a certain commodity than he himself has occasion for, while another has less. The former consequently would be glad to dispose of, and the latter to purchase, a part of this superfluity. But if this latter should chance to have nothing that the former stands in need of, no exchange can be made between them. The butcher has more meat in his shop than he himself can consume, and the brewer and the baker would each of them be willing to purchase a part of it. But they have nothing to offer in exchange, except the different productions of their respective trades, and the butcher is already provided with all the bread and beer which he has immediate occasion for. No exchange can, in this case, be made between them. . . . In order to avoid the inconvenience of such situations, every prudent man in every period of society, after the first establishment of the division of labour, must naturally have endeavoured to manage his affairs in such a manner, as to have at all times by him, besides the peculiar produce of his own industry, a certain quantity of some one commodity or other, such as he imagined few people would be likely to refuse in exchange for the produce of their industry. Many different commodities, it is probable, were successively both thought of and employed for this purpose. In the rude ages of society, cattle are said to have been the common instrument of commerce; and, though they must have been a most inconvenient one,

yet in old times we find things were frequently valued according to the number of cattle which had been given in exchange for them. The armour of Diomedes, says Homer, cost only nine oxen; but that of Glaucus cost an hundred oxen. Salt is said to be the common instrument of commerce and exchange in Abyssinia; a species of shells in some parts of the coasts of India; dried cod at Newfoundland; tobacco in Virginia; sugar in some of our West India colonies; hides or dressed leather in some other countries; and there is at this day [1775] a village in Scotland where it is not uncommon, I am told, for a workman to carry nails instead of money to the baker's shop or the alehouse. In all countries, however, men seem at last to have been determined by irresistible reasons to give the preference, for this employment, to metals above every other commodity."—Adam Smith, *Wealth of Nations*, ch. 4, bk. 1 (v. 1).—"There is . . . no machine which has saved as much labor as money. . . . The invention of money has been rightly compared to the invention of writing with letters. We may, however, call the introduction of money as the universal medium of exchange . . . one of the greatest and most beneficent of advances ever made by the race. . . . Very different kinds of commodities have, according to circumstances, been used as money; but uniformly only such as possess a universally recognized economic value. On the whole, people in a low stage of civilization are wont to employ, mainly, only ordinary commodities, such as are calculated to satisfy a vulgar and urgent want, as an instrument of exchange. As they advance in civilization, they, at each step, choose a more and more costly object, for this purpose, and one which ministers to the more elevated wants. Races of hunters, at least in non-tropical countries, usually use skins as money; that is the almost exclusive product of their labor, one which can be preserved for a long period of time, which constitutes their principal article of clothing and their principal export in the more highly developed regions. Nomadic races and the lower agricultural races, pass, by a natural gradation, to the use of cattle as money; which supposes rich pasturages at

the disposal of all. If it were otherwise, there would be a great many to whom payments of this kind had been made, who would not know what to do with the cattle given them, on account of the charges for their maintenance. . . . That metals were used for the purpose of money much later than the commodities above mentioned, and the precious metals in turn later than the non-precious metals, cannot by any means be shown to be universally true. Rather is gold in some countries to be obtained by the exercise of so little skill, and both gold and silver satisfy a want so live and general, and one so early felt, that they are to be met with as an instrument of exchange in very early times. In the case of isolated races, much depends on the nature of the metals with which the geologic constitution of the country has furnished them. In general, however, the above law is found to prevail here. The higher the development of a people becomes, the more frequent is the occurrence of large payments; and to effect these, the more costly a metal is, the better, of course, it is adapted to effect such payments. Besides, only rich nations are able to possess the costly metals in a quantity absolutely great. Among the Jews, gold as money dates only from the time of David. King Pheidon, of Argos, it is said, introduced silver money into Greece, about the middle of the eighth century before Christ. Gold came into use at a much later period. The Romans struck silver money, for the first time, in 209 before Christ, and, in 207, the first gold coins. Among modern nations, Venice (1285) and Florence seem to have been the first to have coined gold in any quantity."—W. Roscher, *Principles of Political Economy*, bk. 2, ch. 3, sect. 117–119 (p. 1).

Ancient Egypt and Babylonia.—"Money seems to us now so obvious a convenience, and so much a necessity of commerce, that it appears almost inconceivable that a people who created the Sphinx and the Pyramids, the temples of Ipsamboul and Karnac, should have been entirely ignorant of coins. Yet it appears from the statements of Herodotus, and the evidence of the monuments themselves, that this was really the case. As regards the commercial and banking systems of ancient Egypt, we are almost entirely without information. Their standard of value seems to have been the 'outen' or 'ten' of copper (94–96 grammes), which circulated like the *æs rude* of the Romans by weight, and in the form of bricks, being measured by the balance. It was obtained from the mines of Mount Sinai, which were worked as early as the fourth dynasty. Gold and silver appear to have been also used, though less frequently. Like copper, they were sometimes in the form of bricks, but generally in rings, resembling the ring money of the ancient Celts, which is said to have been employed in Ireland down to the 12th century, and still holds its own in the interior of Africa. This approximated very nearly to the possession of money, but it wanted what the Roman lawyers called 'the law' and 'the form.' Neither the weight nor the pureness was guaranteed by any public authority. Such a state of things seems to us very inconvenient, but after all it is not very different from that which prevails in China even at the present day. The first money struck in Egypt, and that for the use rather of the Greek and Phœnician merchants than of the natives, was by the Satrap Aryandes. In ancient

Babylonia and Assyria, as in Egypt, the precious metals, and especially silver, circulated as uncoined ingots. They were readily taken indeed, but taken by weight and verified by the balance like any other merchandise. The excavations in Assyria and Babylon, which have thrown so much light upon ancient history, have afforded us some interesting information as to the commercial arrangements of these countries, and we now possess a considerable number of receipts, contracts, and other records relating to loans of silver on personal securities at fixed rates of interest; loans on landed or house property; sales of land, in one case with a plan; sales of slaves, &c. These were then burnt. M. Lenormant divides these most interesting documents into five principal types:—1. Simple obligations. 2. Obligations with a penal clause in case of non-fulfilment. One he gives which had 79 days to run. 3. Obligations with the guarantee of a third party. 4. Obligations payable to a third person. 5. Drafts drawn upon one place, payable in another. . . . These Assyrian drafts were negotiable, but from the nature of things could not pass by endorsement, because, when the clay was once baked, nothing new could be added, and under these circumstances the name of the payee was frequently omitted. It seems to follow that they must have been regularly advised. It is certainly remarkable that such instruments, and especially letters of credit, should have preceded the use of coins. The earliest banking firm of which we have any account is said to be that of Egibi and Company, for our knowledge of whom we are indebted to Mr. Boscawen, Mr. Pinches, and Mr. Hilton Price. Several documents and records belonging to this family are in the British Museum. They are on clay tablets, and were discovered in an earthenware jar found in the neighbourhood of Hillah, a few miles from Babylon. The house is said to have acted as a sort of national bank of Babylon: the founder of the house, Egibi, probably lived in the reign of Sennacherib, about 700 B. C. This family has been traced during a century and a half, and through five generations, down to the reign of Darius. At the same time, the tablets hitherto translated scarcely seem to me to prove that the firm acted as bankers, in our sense of the word."—Sir J. Lubbock, *The History of Money* (Nineteenth Cent., Nov., 1879).—"We have an enormous number of the documents of this firm, beginning with Nebuchadnezzar the Great, and going on for some five generations or so to the time of Darius. The tablets are dated month after month and year after year, and thus they afford us a sure method of fixing the chronology of that very uncertain period of history. There is a small contract tablet in the Museum at Zürich, discovered by Dr. Oppert, dated in the 5th year of Pacorus, king of Persia, who reigned about the time of Domitian. There is a little doubt about the reading of one of the characters in the name, but if it is correct, it will prove that the use of cuneiform did not fall into disuse until after the Christian Era. . . . Some have tried to show that Egibi is the Babylonian form of Jacob, which would lead one to suspect the family to have been Jews; but this is not certain at present."—E. A. W. Budge, *Babylonian Life and History*, p. 115.—"It is in the development of trade, and especially of banking, rather than in manu-

factures, that Babylonia and Chaldea were in advance of all the rest of the world. The most cautious Assyriologists are the least confident in their renderings of the numerous contract tablets from which, if they were accurately interpreted, we should certainly be able to reconstruct the laws and usages of the world's first great market place. . . . The following account of Babylonian usages is derived from the text of M. Revillout's work. . . . It is confirmed in essentials by the later work of Meissner, who has translated over one hundred deeds of the age of Hammurabi and his successors. In Chaldea every kind of commodity, from land to money, circulated with a freedom that is unknown to modern commerce; every value was negotiable, and there was no limit to the number and variety of the agreements that might be entered into. . . . Brick tablets did not lend themselves readily to 'book-keeping,' as no further entry could be made after baking, while the first entry was not secure unless baked at once. Each brick recorded one transaction, and was kept by the party interested till the contract was completed, and the destruction of the tablet was equivalent to a receipt. Babylonian law allowed debts to be paid by assigning another person's debt to the creditor; a debt was property, and could be assigned without reference to the debtor, so that any formal acknowledgment of indebtedness could be treated like a negotiable bill—a fact which speaks volumes for the commercial honesty of the people. A separate tablet was, of course, required to record the original debt, or rather to say that So-and-so's debt to Such-an-one has been by him sold to a third party. Such third party could again either assign his claim to a bank for a consideration, or if the last debtor had a credit at the bank, the creditor could be paid out of that, a sort of forecast of the modern clearing-house system. The debtor who pays before the term agreed on has to receive a formal surrender of the creditor's claim, or a transfer of it to himself. The Babylonian regarded money and credit as synonymous, and the phrase, 'Money of Such-an-one upon So-and-so,' is used as equivalent to A's credit with B. . . . In ancient Babylonia, as in modern China, the normal effect of a loan was supposed to be beneficial to the borrower. In Egypt, judging from the form of the deeds, the idea was that the creditor asserted a claim upon the debtor, or the debtor acknowledged a liability to the man from whom he had borrowed. In Babylonia the personal question is scarcely considered; one person owes money to another—that is the commonest thing in the world—such loans are in a chronic state of being incurred and paid off; one man's debt is another man's credit, and credit being the soul of commerce, the loan is considered rather as a part of the floating negotiable capital of the country than as a burden on the shoulders of one particular debtor."—E. J. Simcox, *Primitive Civilizations*, v. 1, pp. 320–322.

China.—"Not only did the Chinese possess coins at a very early period, but they were also the inventors of bank notes. Some writers regard bank notes as having originated about 119 B. C., in the reign of the Emperor Ou-ti. At this time the Court was in want of money, and to raise it Klaproth tells us that the prime minister hit upon the following device. When any princess or courtiers entered the imperial

presence, it was customary to cover the face with a piece of skin. It was first decreed then, that for this purpose the skin of certain white deer kept in one of the royal parks should alone be permitted, and then these pieces of skin were sold for a high price. But although they appear to have passed from one noble to another, they do not seem ever to have entered into general circulation. It was therefore very different from the Russian skin money. In this case the notes were 'used instead of the skins from which they were cut, the skins themselves being too bulky and heavy to be constantly carried backward and forward. Only a little piece was cut off to figure as a token of possession of the whole skin. The ownership was proved when the piece fitted in the hole.' True bank notes are said to have been invented about 800 A. D., in the reign of Hiansung, of the dynasty of Tang, and were called 'feytsien,' or flying money. It is curious, however, though not surprising, to find that the temptation to over-issue led to the same results in China as in the West. The value of the notes fell, until at length it took 11,000 min, or £3,000, to buy a cake of rice, and the use of notes appears to have been abandoned. Subsequently the issue was revived, and Tchang-yang (960–990 A. D.) seems to have been the first private person who issued notes. Somewhat later, under the Emperor Tching-tsung (997–1022), this invention was largely extended. Sixteen of the richest firms united to form a bank of issue which emitted paper money in series, some payable every three years. The earliest mention, in European literature, of paper, or rather cotton, money appears to be by Rubruquis, a monk, who was sent by St. Louis, in the year 1252, to the Court of the Mongol Prince Mangu-Khan, but he merely mentions the fact of its existence. Marco Polo, who resided from 1275 to 1284 at the court of Kublai-Khan, . . . gives us a longer and interesting account of the note system, which he greatly admired, and he concludes by saying, 'Now you have heard the ways and means whereby the great Khan may have, and, in fact, has, more treasure than all the kings in the world. You know all about it, and the reason why.' But this apparent facility of creating money led, in the East, as it has elsewhere, to great abuses. Sir John Mandeville, who was in Tartary shortly afterwards, in 1322, tells us that the 'Emperour may dispenden als moche as he wile with outen estymacioun. For he despendeth not, ne maketh no money, but of lether emprented, or of papyre. . . . For there and beyonde hem thei make no money, nonther of gold nor of sylver. And therefore he may despende ynow and outrageously.' The great Khan seems to have been himself of the same opinion. He appears to have 'despent outrageously,' and the value of the paper money again fell to a very small fraction of its nominal amount, causing great discontent and misery, until about the middle of the sixteenth century, under the Mandchu dynasty, it was abolished, and appears to have been so completely forgotten, that the Jesuit father, Gabriel de Magaillans, who resided at Pekin about 1668, observes that there is no recollection of paper money having ever existed in the manner described by Marco Polo; though two centuries later it was again in use. It must be observed, however, that these Chinese bank notes differed from ours in one essential—namely,

they were not payable at sight. Western notes, even when not payable at all, have generally purported to be exchangeable at the will of the holder, but this principle the Chinese did not adopt, and their notes were only payable at certain specified periods."—Sir J. Lubbock, *The History of Money* (*Nineteenth Cent.*, Nov., 1879).

ALSO IN: W. Vissering, *On Chinese Currency*.

Coinage in its Beginnings.—"Many centuries before the invention of the art of coining, gold and silver in the East, and bronze in the West, in bullion form, had already supplanted barter, the most primitive of all methods of buying and selling, when among pastoral peoples the ox and the sheep were the ordinary mediums of exchange. The very word 'pecunia' is an evidence of this practice in Italy at a period which is probably recent in comparison with the time when values were estimated in cattle in Greece and the East. 'So far as we have any knowledge,' says Herodotus, 'the Lydians were the first nation to introduce the use of gold and silver coin.' This statement of the father of history must not, however, be accepted as finally settling the vexed question as to who were the inventors of coined money, for Strabo, Aelian, and the Parian Chronicle, all agree in adopting the more commonly received tradition, that Pheldon, King of Argos, first struck silver coins in the island of Aegina. These two apparently contradictory assertions modern research tends to reconcile with one another. The one embodies the Asiatic, the other the European tradition; and the truth of the matter is that gold was first coined by the Lydians in Asia Minor, in the seventh century before our era; and that silver was first struck in European Greece about the same time. The earliest coins are simply bullets of metal, oval or bean-shaped, bearing on one side the signet of the state or of the community responsible for the purity of the metal and the exactness of the weight. Coins were at first stamped on one side only, the reverse showing merely the impress of the square-headed spike or anvil on which, after being weighed, the bullet of hot metal was placed with a pair of tongs and there held while a second workman adjusted upon it the engraved die. This done, a third man with a heavy hammer would come down upon it with all his might, and the coin would be produced, bearing on its face or obverse the seal of the issuer, and on the reverse only the mark of the anvil spike, an incuse square. This simple process was after a time improved upon by adding a second engraved die beneath the metal bullet, so that a single blow of the sledge-hammer would provide the coin with a type, as it is called, in relief on both sides. The presence of the unengraved incuse square may therefore be accepted as an indication of high antiquity, and nearly all Greek coins which are later than the age of the Persian wars bear a type on both sides. . . . Greek coin-types may be divided into two distinct classes: (a) Mythological or religious representations, and (b) portraits of historical persons. From the earliest times down to the age of Alexander the Great the types of Greek coins are almost exclusively religious. However strange this may seem at first, it is not difficult to explain. It must be borne in mind that when the enterprising and commercial Lydians first lighted upon the happy idea of stamping metal for general cir-

ulation, a guarantee of just weight and purity of metal would be the one condition required. . . . What more binding guarantee could be found than the invocation of one or other of those divinities most honoured and most dreaded in the district in which the coin was intended to circulate. There is even good reason to think that the earliest coins were actually struck within the precincts of the temples, and under the direct auspices of the priests; for in times of general insecurity by sea and land, the temples alone remained sacred and inviolate."—B. V. Head, *Greek Coins* (*Coins and Medals*, ed. by S. Lane-Poole, ch. 2).

Early Banking.—"The banker's calling is both new and old. As a distinct branch of commerce, and a separate agent in the advancement of civilisation, its history hardly extends over 300 years; but, in a rude and undeveloped sort of way, it has existed during some dozens of centuries. It began almost with the beginning of society. No sooner had men learnt to adopt a portable and artificial equivalent for their commodities, and thus to buy and sell and get gain more easily, than the more careful of them began to gather up their money in little heaps, or in great heaps, if they were fortunate enough. These heaps were, by the Romans, called *montes*—mounds, or banks,—and henceforth every money-maker was a primitive banker. The prudent farmers and shopkeepers in the out-of-the-way villages, who now lock up their savings in strong boxes, or conceal them in places where they are least likely to be found by thieves, show us how the richest and most enterprising men of far-off times, whether in Anglo-Saxon or mediæval Britain, ancient Greece and Rome, China or Judæa, made banks for themselves before the great advantages of joint-stock heaping up of money were discovered. When and in what precise way that discovery was made antiquarians have yet to decide. . . . Perhaps Jews and Greeks set the example to the modern world. Every rich Athenian had his treasurer or money-keeper, and whenever any particular treasurer proved himself a good accountant and safe banker, it is easy to understand how, from having one master, he came to have several, until he was able to change his condition of slavery for the humble rank of a freedman, and then to use his freedom to such good purpose that he became an influential member of the community. Having many people's money entrusted to his care, he received good payment for his responsible duty, and he quickly learned to increase his wealth by lending out his own savings, if not his employers' capital, at the highest rate of interest that he could obtain. The Greek bankers were chiefly famous as money-lenders, and interest at thirty-six per cent. per annum was not considered unusually exorbitant among them. For their charges they were often blamed by spendthrifts, satirists, and others. 'It is said,' complains Plutarch, 'that hares bring forth and nourish their young at the same time that they conceive again; but the debts of these scoundrels and savages bring forth before they conceive, for they give and immediately demand again; they take away their money at the same time as they put it out; they place at interest what they receive as interest. The Mesenians have a proverb: "There is a Pylos before Pylos, and yet another Pylos still." So of the usurers it may be said, "There is a profit before

profit, and yet another profit still;" and then, forsooth, they laugh at philosophers, who say that nothing can come out of nothing!' The Greek bankers and money-lenders, those of Delos and Delphi especially, are reported to have used the temples as treasure-houses, and to have taken the priests into partnership in their money-making. Some arrangement of that sort seems to have existed among the Jews, and to have aroused the anger of Jesus when he went into the Temple of Jerusalem, 'and overthrew the tables of the money-changers, and said unto them, It is written, My house shall be called the house of prayer; but ye have made it a den of thieves.' Bankers' or money-changers' tables were famous institutions all over the civilised world of the ancients. Livy tells how, in 308 B. C., if not before, they were to be found in the Roman Forum, and later Latin authors make frequent allusions to banking transactions of all sorts. They talk of deposits and securities, bills of exchange and drafts to order, cheques and bankers' books, as glibly as a modern merchant. But these things were nearly forgotten during the dark ages, until the Jews, true to the money-making propensities that characterised them while they still had a country of their own, set the fashion of money-making and of banking in all the countries of Europe through which they were dispersed."—H. R. Fox Bourne, *Romance of Trade*, ch. 4.

Ancient Greece.—"Oriental contact first stirred the 'auri sacra fames' in the Greek mind. That this was so the Greek language itself tells plainly. For 'chrysolos,' gold, is a Semitic loan-word, closely related to the Hebrew 'charuz,' but taken immediately, there can be no reasonable doubt, from the Phœnician. The restless treasure-seekers from Tyre were, indeed, as the Græco-Semitic term metal intimates, the original subterranean explorers of the Balkan peninsula. As early, probably, as the 15th century B. C. they 'dugged out ribs of gold' on the islands of Thasos and Siphnos, and on the Thracian mainland at Mount Pangæum; and the fables of the Golden Fleece, and of Arimaspean wars with gold-guarding griffins, prove the hold won by the 'precious bane' over the popular imagination. Asia Minor was, however, the chief source of prehistoric supply, the native mines lying long neglected after the Phœnicians had been driven from the scene. Midas was a typical king in a land where the mountains were gold-granulated, and the rivers ran over sands of gold. And it was in fact from Phrygia that Pelops was traditionally reported to have brought the treasures which made Mycenæ the golden city of the Achæan world. The Epic affluence in gold was not wholly fictitious. From the sepulchres of Mycenæ alone about one hundred pounds Troy weight of the metal have been disinterred; freely at command even in the lowest stratum of the successive habitations at Hissarlik, it was lavishly stored, and highly wrought in the picturesquely-named 'treasure of Priam'; and has been found, in plates and pearls, beneath twenty metres of volcanic debris, in the Cycladic islands Thera and Therapia. This plentifulness contrasts strangely with the extreme scarcity of gold in historic Greece. It persisted, however, mainly owing to the vicinity of the auriferous Ural Mountains, in the Milesian colony of Panticapæum, near Kertch, where graves have been

opened containing corpses shining 'like images' in a complete clothing of gold-leaf, and equipped with ample supplies of golden vessels and ornaments. Silver was, at the outset, a still rarer substance than gold. Not that there is really less of it. . . . But it occurs less obviously, and is less easy to obtain pure. Accordingly, in some very early Egyptian inscriptions, silver, by heading the list of metals, claims a supremacy over them which proved short-lived. It terminated for ever with the scarcity that had produced it, when the Phœnicians began to pour the flood of Spanish silver into the markets and treasure-chambers of the East. Armenia constituted another tolerably copious source of supply; and it was in this quarter that Homer located the 'birth-place of silver.'"—A. M. Clerke, *Familiar Studies in Homer*, ch. 10.—"Taken as a whole the Greek money is excellent; pure in metal and exact in weight, its real corresponding to its nominal value. Nothing better has been done in this way among the most civilized and best governed nations of modern times. There is, indeed, always a certain recognized limit, which keeps the actual weight of the money slightly below its theoretical weight; and this fact recurs with such regularity that it may be regarded as a rule. We must conclude, therefore, that it was under this form that Greek civilization allowed to the colner of money the right of seigniorage, or the benefit legitimately due to him to cover the expenses of the coinage, and in exchange for the service rendered by him to the public in providing them with money, by which they were saved the trouble of perpetual weighing. This allowance, however, is always kept within very narrow limits, and is never more than the excess of the natural value of the coined money over that of the metal in ingots. . . . Of course, the general and predominant fact of the excellence of the Greek money in the time of Hellenic independence is subject, like all human things, to some exceptions. There were a few cities which yielded to the delusive bait of an unlawful advantage, debasing the quality of their coins without foreseeing that the consequences of this unfair operation would react against themselves. But these exceptions are very rare."—F. Lenormant, *Money in Ancient Greece and Rome* (*Contemp. Rev.*, Feb., 1879).—"The quantity, particularly of gold, . . . was, in the earlier historical periods, according to unexceptionable testimony, extremely small. In the time of Croesus, according to Theopompus, gold was not to be found for sale in any of the Greek States. The Spartans, needing some for a votive offering, wished to purchase a quantity from Croesus; manifestly because he was the nearest person from whom it could be obtained. . . . Even during the period from the seventh to the eightieth Olympiads, (B. C. 500-460,) pure gold was a rarity. When Hiero of Syracuse wished to send a tripod and a statue of the Goddess of Victory, made of pure gold, to the Delphian Apollo, he could not procure the requisite quantity of metal until his agents applied to the Corinthian Archtiles, who, as was related by the above-mentioned Theopompus and Phanias of Eresus, had long been in the practice of purchasing gold in small quantities, and hoarding it. Greece proper itself did not possess many mines of precious metals. The most important of the few which it possessed were the Attic

silver mines of Laurion. These were at first very productive. . . . Asia and Africa furnished incomparably a larger quantity of the precious metals than was procured in Greece and the other European countries. . . . Colchis, Lydia, and Phrygia, were distinguished for their abundance of gold. Some derive the tradition of the golden fleece from the gold washings in Colchis. Who has not heard of the riches of Midas, and Gyges, and Croesus, the gold mines of the mountains Tmolus and Sipylus, the gold-sand of the Pactolus? . . . From the very productive gold mines of India, together with its rivers flowing with gold, among which in particular the Ganges may be classed, arose the fable of the gold-digging ants. From these annual revenues the royal treasure was formed. By this a great quantity of precious metal was kept from circulation. It was manifestly their principle to coin only as much gold and silver as was necessary for the purposes of trade, and for the expenditures of the State. In Greece, also, great quantities were kept from circulation, and accumulated in treasuries. There were locked up in the citadel of Athens 9,700 talents of coined silver, besides the gold and silver vessels and utensils. The Delphian god possessed a great number of the most valuable articles. . . . The magnificent expenditures of Pericles upon public edifices and structures, for works of the plastic arts, for theatrical exhibitions, and in carrying on wars, distributed what Athens had collected, into many hands. The temple-robbing Phocians coined from the treasures at Delphi ten thousand talents in gold and silver; and this large sum was consumed by war. Philip of Macedonia, in fine, carried on his wars as much with gold as with arms. Thus a large amount of money came into circulation in the period between the commencement of the Persian wars and the age of Demosthenes. The precious metals, therefore, must of necessity have depreciated in value, as they did at a later period, when Constantine the Great caused money to be coined from the precious articles found in the heathen temples. But what a quantity of gold and silver flowed through Alexander's conquest of Asia into the western countries! Allowing that his historians exaggerate, the main point, however, remains certain. . . . Alexander's successors not only collected immense sums, but by their wars again put them into circulation. . . . The enormous taxes which were raised in the Macedonian kingdoms, the revelry and extravagant liberality of the kings, which passed all bounds, indicate the existence of an immense amount of ready money."—A. Boeckh, *The Public Economy of the Athenians*, bk. 1, ch. 3.

Phœnicia.—"Nearly all the silver in common use for trade throughout the East was brought into the market by the Phœnicians. The silver mines were few and distant; the trade was thus a monopoly, worth keeping so by the most savage treatment of suspected rivals, and, as a monopoly, so lucrative that, but for the long and costly voyage between Spain and Syria, the merchant would have seemed to get his profit for nothing. . . . The use of silver money, though it did not originate with the Phœnicians, was no doubt promoted by their widespread dealings. The coins were always of known weight, and standing in a well-known relation to the bars used for large transactions."—E. J. Simcox,

Primitive Civilizations, v. 1, p. 400.—"It is a curious fact that coinage in Phœnicia, one of the most commercial of ancient countries, should have been late in origin, and apparently not very plentiful. There are, in fact, no coins of earlier period than the third century which we can with certainty attribute to the great cities of Tyre and Sidon. Some modern writers, however, consider that many of the coins generally classed under Persia—notably those bearing the types of a chariot, a galley, and an owl respectively—were issued by those cities in the 5th and 4th centuries B. C. But it is certain, in any case, that the Phœnicians were far behind the Greeks in the art of moneying. With the invasion of Persia by Alexander the Great came a great change; and all the ancient landmarks of Asiatic government and order were swept away. During the life of Alexander the Great the coins bearing his name and his types circulated throughout Asia; and after his death the same range of currency was attained by the money of the early Seleucid Kings of Syria—Seleucus I., Antiochus I., and Antiochus II., who virtually succeeded to the dominions of the Persian Kings, and tried in many respects to carry on their policy. Of these monarchs we possess a splendid series of coins."—S. Lane-Poole, *Coins and Medals*, ch. 6.

The Jews.—"It would seem that, until the middle of the second century B. C., the Jews either weighed out gold and silver for the price of goods, or else used the money usually current in Syria, that of Persia, Phœnicia, Athens, and the Seleucidae. Simon the Maccabee was the first to issue the Jewish shekel as a coin, and we learn from the Book of Maccabees that the privilege of striking was expressly granted him by King Antiochus VII. of Syria. We possess shekels of years 1-5 of the deliverance of Zion; the types are a chalice and a triple flower. The kings who succeeded Simon, down to Antigonus, confined themselves to the issue of copper money, with Hebrew legends and with types calculated not to shock the susceptible feelings of their people, to whom the representation of a living thing was abominable—such types as a lily, a palm, a star, or an anchor. When the Herodian family came in, several violations of this rule appear."—S. Lane-Poole, *Coins and Medals*, ch. 6.

Rome.—"In Rome the generic terms for money seem to have been successively, pecunia, As, nummus, and moneta. . . . Moneta . . . is derived from the name of the temple in which, or in a building to or next to which the money of Rome was coined after the defeat of Pyrrhus, B. C. 275, more probably after the capture of Tarentum by the Romans, B. C. 272. It probably did not come into use until after the era of Scipio, and then was only used occasionally until the period of the Empire, when it and its derivatives became more common. Nummus, nevertheless, continued to hold its ground until towards the decline of the Empire, when it went entirely out of use, and moneta and its derivatives usurped its place, which it has continued to hold ever since. Moneta is therefore substantially a term of the Dark Ages. . . . The idea associated with moneta is coins, whose value was derived mainly from that of the material of which they were composed; whilst the idea associated with nummus is a system of symbols

whose value was derived from legal limitation. From the fact that our language sprang from the Dark Ages, we have no generic word for money other than *moneta*, which only relates to one kind of money. For a similar reason, the comparative newness of the English tongue, we have no word for a piece of money except coin, which, properly speaking, only relates to one kind of piece, namely, that which is struck by the *cuneus*."—A. Del Mar, *Hist. of Money in Ancient Countries*, ch. 28.—The extent and energy of the Roman traffic, in the great age of the Republic, during the third and second centuries before Christ, "may be traced most distinctly by means of coins and monetary relations. The Roman denarius kept pace with the Roman legions. . . . The Sicilian mints—last of all that of Syracuse in 542—were closed or at any rate restricted to small money in consequence of the Roman conquest, and . . . in Sicily and Sardinia the denarius obtained legal circulation at least side by side with the older silver currency and probably very soon became the exclusive legal tender. With equal if not greater rapidity the Roman silver coinage penetrated into Spain, where the great silver-mines existed and there was virtually no earlier national coinage; at a very early period the Spanish towns even began to coin after the Roman standard. On the whole, as Carthage coined only to a very limited extent, there existed not a single important mint in addition to that of Rome in the region of the western Mediterranean, with the exception of the mint of Massilia and perhaps also of those of the Illyrian Greeks at Apollonia and Epidamnus. Accordingly, when the Romans began to establish themselves in the region of the Po, these mints were about 225 subjected to the Roman standard in such a way, that, while they retained the right of coining silver, they uniformly—and the Massiliots in particular—were led to adjust their drachma to the weight of the Roman three-quarter denarius, which the Roman government on its part began to coin, primarily for the use of upper Italy, under the name of the 'piece of Victory' (*victoriatus*). This new system, based on the Roman, prevailed throughout the Massiliot, Upper Italian, and Illyrian territories; and these coins even penetrated into the barbarian lands on the north, those of Massilia, for instance, into the Alpine districts along the whole basin of the Rhone, and those of Illyria as far as the modern Transylvania. The eastern half of the Mediterranean was not yet reached by the Roman money, as it had not yet fallen under the direct sovereignty of Rome; but its place was filled by gold, the true and natural medium for international and transmarine commerce. It is true that the Roman government, in conformity with its strictly conservative character, adhered—with the exception of a temporary coinage of gold occasioned by the financial embarrassment during the Hannibalic war—steadfastly to the rule of coining silver only in addition to the national-Italian copper; but commerce had already assumed such dimensions, that it was able in the absence of money to conduct its transactions with gold by weight. Of the sum in cash, which lay in the Roman treasury in 597, scarcely a sixth was coined or uncoined silver, five-sixths consisted of gold in bars, and beyond doubt the precious metals were found in all the chests of the larger Roman capitalists in substantially

similar proportions. Already therefore gold held the first place in great transactions; and, as may be inferred from this fact, the preponderance of traffic was maintained with foreign lands, and particularly with the East, which since the times of Philip and Alexander the Great had adopted a gold currency. The whole gain from these immense transactions of the Roman capitalists flowed in the long run to Rome. . . . The moneyed superiority of Rome as compared with the rest of the civilized world was, accordingly, quite as decided as its political and military ascendancy. Rome in this respect stood towards other countries somewhat as the England of the present day stands towards the continent."—T. Mommsen, *Hist. of Rome*, bk. 3, ch. 12 (v. 2).—In the later years of the Roman Republic the coinage became debased and uncertain. "Caesar restored the public credit by issuing good money, such as had not been seen in Rome for a length of time, money of pure metal and exact weight; with scarcely any admixture of plated pieces, money which could circulate for its real value, and this measure became one of the principal sources of his popularity. Augustus followed his example, but at the same time took away from the Senate the right of coining gold and silver, reserving this exclusively to the imperial authority, which was to exercise it absolutely without control. From this time we find the theory that the value of money is arbitrary, and depends solely on the will of the sovereign who issues it, more and more widely and tenaciously held. . . . The faith placed in the official impress fostered the temptation to abuse it. . . . In less than a century the change of the money of the State into imperial money, and the theory that its value arose from its bearing the effigy of the sovereign, produced a system of adulteration of specie, which went on growing to the very close of the Empire, and which the successors of Augustus utilized largely for the indulgence of their passions and their prodigality."—F. Lenormant, *Money in Ancient Greece and Rome* (Contemp. Rev., Feb., 1879).

Mediæval Money and Banking.—"As regards the monetary system of the Middle Ages, the precious metals, when uncoined, were weighed by the pound and half pound or mark, for which different standards were in use, the most generally recognised being those of Troyes and Cologne. Of coined money there existed a perplexing variety, which made it almost impossible to ascertain the relative value, not only of different coins, but of the same coin of different issues. This resulted from the emperor or king conferring the right of coinage upon various lords spiritual and temporal, from whom it was ultimately acquired by individual towns. The management was in most cases entrusted to a company, temporary or permanent, inspected by an official, the coin-tester, originally appointed by the sovereign, but afterwards by the company, and confirmed by the king or bishop. The house where the process of coining was performed was called the mint, and the company who held the rights of coinage in fee was known as the Mint House Company, or simply the House Company. Very generally the office was held by the Corporation of Goldsmiths. The want of perfect supervision led to great debasement of the currency, especially in Germany and France; but in England and Italy the standard

was tolerably well maintained. Payments in silver were much more common than in gold. Before the Crusades the only gold coins known in Europe were the Byzantine solides, the Italian tari, and Moorish maurabotini. The solidi, which were originally of 23 to 23½ carat gold, but subsequently very much deteriorated, were reckoned as equal to twelve silver denars. They passed current in Southern and Eastern Europe, Hungary, Germany, Poland, and Prussia. . . . Solde, sol, and sou are only repeated transformations of the name of the coin, which have been accompanied by still greater changes in its value. The tari or tarentini derived its name from the Italian town where it was originally struck. It was less generally known than the solides, and was equal to one-fourth the latter in value. The maurabotini or sarazens were only of 15 carats gold. The name survives in the Spanish maravedi, which, however, like the sou, is now made of copper instead of gold. In the thirteenth century augustals, florentines, and ducats, or zecchins (sequins), were coined in Italy. The first-mentioned, the weight of which was half an ounce, were named in honour of Frederick II., who was Roman Cæsar and Augustus in 1252. The florentines, also known as gigliati, or lilies, from the arms of Florence, which they bore on one side, with the effigy of John the Baptist on the reverse, were of fine gold and lighter than the solidi, about 64 being reckoned equal to the mark. The ducats or zecchins were of Venetian origin, receiving their first name from the Duca or Doge, and the other from the Zecca or Mint House. They were somewhat less in value than the florentines, 66 or 67 being counted to the fine mark. Nearly equivalent in value to these Italian coins were the gold guilders coined in the fourteenth century in Hungary and the Rhine regions. The Rhenish guilder was of 22½ or 23 carats fine, and in weight $\frac{1}{16}$ of a mark of Cologne. The silver guilder was of later production, and the name is now used as equivalent to florin. . . . In silver payments, the metal being usually nearly pure, it was common to compute by weight, coins and uncoined bullion being alike put into the scale, as is still the case in some Eastern countries. Hence the origin of the pound, livre, or mark. The most widely diffused silver coin was the denarius, which was, as in ancient Roman times, the $\frac{1}{16}$ of a pound. The name pending or pennig, by which the denarius was known among the old Teutonic nations, seems to be connected with pendere, to weigh out or pay; as the other ancient Teutonic coin, the sceat, was with sceoton, to pay, a word which is preserved in the modern phrases 'scot free,' 'pay your scot.' . . . Half-pennies and farthings were not known in the earliest times, but the penny was deeply indented by two cross lines, which enabled it to be broken into quarters or farthings (feordings or fourthings). From the indented cross the denarius was known in Germany as the kreutzer. . . . With such a diversity of coinage, it was necessary to settle any mercantile transaction in the currency of the place. Not only would sellers have refused to accept money whose value was unknown to them, but in many places they were forbidden to do so by law. Merchants attending foreign markets therefore brought with them a quantity of fine silver and gold in bars, which they exchanged on the spot for the current coin of the place, to

be used in settling their transactions; the balance remaining on hand they re-exchanged for bullion before leaving. The business of money-changing, which thus arose, was a very lucrative one, and was originally mostly in the hands of Italian merchants, chiefly Lombards and Florentines. In Italy the money-changers formed a guild, members of which settled in the Netherlands, England, Cologne, and the Mediterranean ports. In these different towns and countries they kept up a close connection with each other and with Italy, and at an early period (before the thirteenth century) commenced the practice of assignments, i. e., receiving money in one place, to be paid by an order upon their correspondents in another, thus saving the merchant who travelled from country to country the expense and risk of transporting specie. In the thirteenth century this branch of business was in extensive use at Barcelona, and in 1307 the tribute of 'Peter's pence' was sent from England to the Pope through the Lombard exchangers. From 5 to 6 per cent., or more, was charged upon the transaction, and the profitable nature of the business soon led many wealthy and even noble Italian families to employ their money in this way. They established a member of their firm in each of the great centres of trade to receive and pay on their account. In Florence alone (about 1350) there are said to have been eighty such houses. Among these the Frescobaldi, Bardi, and Peruzzi are well-known names; but the chief place was taken by the famous Florentine house of the Medici, who had banking houses established in sixteen of the chief cities of Europe and the Levant. In the north of Europe, before long, similar arrangements were established by the merchants of the Hanseatic League. . . . Assignments of this kind were drawn out in the form of letters, requesting the person by whom the money was due to pay it over to another party, named in the bill, on account of the writer, specifying also the time within which and the form in which the payment was to be made. They were thus known as letters, billets, or bills of exchange, and appear in Italy as early as the thirteenth and fourteenth centuries. Among the earliest examples in existence are a letter of exchange, dated at Milan in 1325, payable within five months at Lucca; one dated at Bruges, 1304, and payable at Barcelona; and another, dated at Bologna, 1381, payable in Venice. . . . 'The first writers who treat of bills are Italians: the Italian language furnishes the technical terms for drafts, remittances, currency, sight, usance, and discount, used in most of the languages of Europe.' . . . Of other branches of banking the germs also appeared in the Middle Ages. Venice seems to have been the first city to possess something answering to a deposit bank. The merchants here united in forming a common treasury, where they deposited sums of money, upon which they gave assignments or orders for payment to their creditors, and to which similar assignments due to themselves were paid and added on to the amount at their credit. The taula di cambi (exchange counter) of Barcelona was a similar institution, as also the bank of St. George, at Genoa."—J. Yeats, *Growth and Vicissitudes of Commerce*, appendix F.—The name "Lombards" was frequently given, during the Middle Ages, to all the Italian merchants and

money-lenders—from Florence, Venice, Genoa, and elsewhere—who were engaged throughout Europe in banking and trade.

Florentine Banking.—"The business of money-changing seemed thoroughly at home here, and it is not surprising that the invention of bills of exchange, which we first meet with in 1199 in the relations between England and Italy, should be ascribed to Florence. The money trade seems to have flourished as early as the twelfth century, towards the end of which a Marquis of Ferrara raised money on his lands from the Florentines. In 1204 we find the money-changers as one of the corporations. In 1228, and probably from the beginning of the century, several Florentines were settled in London as changers to King Henry III.; and here, as in France, they conducted the money transactions of the Papal chair in conjunction with the Sienese. Their oldest known statute, which established rules for the whole conduct of trade (*Statuto dell' Università della Mercatanzia*) drawn up by a commission consisting of five members of the great guilds, is dated 1280. Their guild-hall was in the Via Calamaruzza, opposite that of the Calimata, and was later included in the buildings of the post-office, on the site of which, after the post-office had been removed to what was formerly the mint, a building was lately erected, similar in architecture to the Palazzo of the Signoria, which stands opposite. Their coat of arms displayed gold coins laid one beside another on a red field. At the end of the thirteenth century their activity, especially in France and England, was extraordinarily great. But if wealth surpassing all previous conception was attained, it not seldom involved loss of repute, and those who pursued the calling ran the risk of immense losses from fiscal measures to the carrying out of which they themselves contributed, as well as those which were caused by insolvency or dishonesty. . . . The names of Tuscans and Lombards, and that of Cahorsiens in France, no longer indicated the origin, but the trade of the money-changers, who drew down the ancient hatred upon themselves. . . . France possessed at this time the greatest attraction for the Florentine money-makers, although they were sometimes severely oppressed, which is sufficient proof that their winnings were still greater than their occasional losses. . . . The Florentine money market suffered the severest blow from England. At the end of the twelfth century there were already Florentine houses of exchange in London, and if Pisans, Genoese, and Venetians managed the trade by sea in the times of the Crusades, it was the Florentines mostly who looked after financial affairs in connection with the Papal chair, as we have seen. Numerous banks appeared about the middle of the thirteenth century, among which the Frescobaldi, a family of ancient nobility, and as such attained by the prosecutions against it, took the lead, and were referred to the custom-house of the country for re-imbusement of the loans made to the kings Edward I. and II. Later, the two great trading companies of the Bardi and Peruzzi came into notice, and with their money Edward III. began the French war against Philip of Valois. But even in the first year of this war, which began with an unsuccessful attack upon Flanders, the king suspended the payments to the creditors of the State by a decree of May 6, 1339. The ad-

vances made by the Bardi amounted to 180,000 marks sterling, those of the Peruzzi to above 135,000, according to Giovanni Villani, who knew only too well about these things, since he was ruined by them himself to the extent of 'a sum of more than 1,355,000 gold florins, equivalent to the value of a kingdom.' Bonifazio Peruzzi, the head of the house, hastened to London, where he died of grief in the following year. The blow fell on the whole city. . . . Both houses began at once to liquidate, and the prevailing disturbance contributed not a little to the early success of the ambitious plans of the Duke of Athens. The real bankruptcy ensued, however, in January 1346, when new losses had occurred in Sicily. . . . The banks of the Acciaiuoli, Bonaccorsi, Cocchi, Antellesi, Corsini, da Uzzano, Perendoli, and many smaller ones, as well as numerous private persons, were involved in the ruin. 'The immense loans to foreign sovereigns,' adds Villani, 'drew down ruin upon our city, the like of which it had never known.' There was a complete lack of cash. Estates in the city found no purchasers at a third of their former value. . . . The famine and pestilence of 1347 and 1348, the oppressions of the mercenary bands and the heavy expenses caused by them, the cost of the war against Pope Gregory XI., and finally the tumult of the Ciompi, left Florence no peace for a long time. . . . At the beginning of the fifteenth century industry was again flourishing in all its branches in Florence, financial operations were extended, and foreign countries filled with Florentine banks and mercantile houses. . . . In London the most important firms had their representatives, Bruges was the chief place for Flanders, and we shall see how these connections lasted to the time of the greatest splendour of the Medici. France is frequently mentioned. The official representatives of the Florentine nation resided in the capital, while numerous houses established themselves in Lyons, in Avignon (since the removal of the Papal chair to this town), in Nîmes, Narbonne, Carcassonne, Marseilles, &c. . . . The house of the Peruzzi alone had sixteen counting-houses in the fourteenth century, from London to Cyprus."—A. von Reumont, *Lorenzo de' Medici*, bk. 1, ch. 4 (p. 1).—"The three principal branches of industry which enriched the Florentines were—banking, the manufacture of cloth, and the dyeing of it, and the manufacture of silk. The three most important guilds of the seven 'arti maggiori' were those which represented these three industries. Perhaps the most important in the amount of its gains, as well as that which first rose to a high degree of importance, was the 'Arte del Cambio,' or banking. The earliest banking operations seem to have arisen from the need of the Roman court to find some means of causing the dues to which it laid claim in distant parts of Europe to be collected and transmitted to Rome. When the Papal Court was removed to Avignon, its residence there occasioned a greatly increased sending backwards and forwards of money between Italy and that city. And of all this banking business, the largest and most profitable portion was in the hands of Florentine citizens, whether resident in Florence or in the various commercial cities of Europe. We find Florentines engaged in lending money at interest to sovereign princes as early as the first quarter of the twelfth century."—T. A. Trollope, *History*

of the Commonwealth of Florence, bk. 4, ch. 1 (v. 2).

Genoa.—The Bank of St. George.—“The Bank of St. George, its constitution, its building, and its history, forms one of the most interesting relics of mediæval commercial activity. Those old grey walls, as seen still in Genoa, begrimed with dirt and fast falling into decay, are the cradle of modern commerce, modern banking schemes, and modern wealth. . . . This Bank of St. George is indeed a most singular political phenomenon. Elsewhere than in Genoa we search in vain for a parallel for the existence of a body of citizens distinct from the government—with their own laws, magistrates, and independent authority—a state within a state, a republic within a republic. All dealings with the government were voluntary on the part of the bank. . . . But, far from working without harmony, we always find the greatest unanimity of feeling between these two forms of republics within the same city walls. The government of Genoa always respected the liberties of the bank, and the bank always did its best to assist the government when in pecuniary distress. . . . To define an exact origin for the bank is difficult; it owed its existence to the natural development of commercial enterprise rather than to the genius of any one man, or the shrewdness of any particular period in Genoese history. The Crusades, and the necessary preparation of galleys, brought into Genoa the idea of advancing capital for a term of years as a loan to the government on the security of the taxes and public revenues; but in those cases the profits were quickly realized, and the debts soon cancelled by the monarchs who incurred them. However, the expeditions against the Saracens and the Moors were otherwise, and were undertaken at some risk to Genoa herself. . . . Now large sums of money were advanced, the profits on which were not spontaneous; it was more an investment of capital for a longer term of years, which was secured by the public revenues, but the profits of which depended on the success of the expedition. In 1148 was the first formal debt incurred by the government, and to meet the occasion the same system was adopted which continued in vogue, subject only to regulations and improvements which were found necessary as time went on, until the days of the French Revolution. The creditors nominated from amongst themselves a council of administration to watch over the common interests, and to them the government conceded a certain number of the custom duties for a term of years until the debt should be extinguished. This council of administration elected their own consuls, after the fashion of the Republic governors. Every hundred francs was termed a share (*luogo*) and every creditor a shareholder (*luogatorio*). . . . Each separate loan was termed a ‘compera,’ and these loans were collectively known as the ‘compere of St. George,’ which in later years became the celebrated bank. Each loan generally took the name of the object for which it was raised, or the name of the saint on whose day the contract was signed; and when an advance of money was required, it was done by public auction in the streets, when the auctioneer sold the investment to the ever ready merchants, who collected outside the ‘loggia,’ or other prominent position chosen for the sale. In a loud voice was pro-

claimed the name and object of the loan, and the tax which was to be handed over to the purchasers to secure its repayment. So numerous did these loans become by 1252, that it was found necessary to unite them under one head, with a chancellor and other minor officials to watch over them. And as time went on, so great was the credit of Genoa, and so easy was this system found for raising money, that the people began to grow alarmed at the extent of the liabilities. So, in 1302, commissioners were appointed at a great assembly, two hundred and seventy-one articles and regulations were drawn up to give additional security to investors, and henceforth no future loan could be effected without the sanction of the consuls and the confirmation of the greater council of the shareholders. . . . During the days of the first doge, Simone Boccanegra, great changes were to be effected in the working system of the ‘compere of St. George.’ To this date many have assigned the origin of the Bank of St. George, but it will be seen only to be a further consolidation of the same system, which had already been at work two centuries. . . . In 1339, . . . at the popular revolution, all the old books were burnt, and a new commission appointed to regulate the ‘compere.’ . . . Instead . . . of being the origin of the bank, it was only another step in the growing wish for consolidation, which the expanding tendency of the ‘compere’ rendered necessary; which consolidation took final effect in 1407, when the Bank was thoroughly organized on the same footing which lasted till the end. Every year and every event tended towards this system of blending the loans together, to which fact is due the extensive power which the directors of the bank eventually wielded, when all interests and all petty disputes were merged together in one. . . . As time went on, and the French governor, Boucicault, weighed on the treasury the burden of fresh fortifications, and an expensive war; when Corsican troubles, and the Turks in the East, caused the advance of money to be frequent, an assembly of all the shareholders in all the loans decided that an entire reorganization of the public debts should take place. Nine men were elected to draw up a new scheme, in 1407, and by their instrumentality all the shares were united; the interest for all was to be seven per cent., and fresh officials were appointed to superintend the now thoroughly constituted and re-named ‘Bank of St. George.’ And at length we behold this celebrated bank. Its credit never failed, and no anxiety was ever felt by any shareholder about his annual income, until the days of the French Revolution. . . . This Bank of St. George was essentially one of the times, and not one which could have existed on modern ideas of credit; for it was a bank which would only issue paper for the coin in its actual possession, and would hardly suit the dictates of modern commerce. It was not a bank for borrowers but for capitalists, who required enormous security for immense sums until they could employ them themselves. . . . One of the most interesting features in connection with the dealings of the bank with the Genoese government, and a conclusive proof of the perfect accord which existed between them, was the cession from time to time of various colonies and provinces to the directors of the bank when the government felt itself too weak and too poor to

maintain them. In this manner were the colonies in the Black Sea made over to the bank when the Turkish difficulties arose. Corsica and Cyprus, also towns on the Riviera, such as Sarzana, Ventimiglia, Levanto, found themselves at various times under the direct sovereignty of the bank. . . . It is melancholy to have to draw a veil over the career of this illustrious bank with the Revolution of 1798. The new order of things which Genoa had learnt from France deemed it inconsistent with liberty that the taxes, the property of the Republic, should remain in the hands of the directors of St. George; it was voted a tyranny on a small scale, and the directors were compelled to surrender them; and inasmuch as the taxes represented the sole source from which their income was derived, they soon discovered that their bank notes were useless, and the building was closed shortly afterwards. In 1804 and 1814 attempts were made to resuscitate the fallen fortunes of St. George, but without avail; and so this bank, the origin of which was shrouded in the mysteries of bygone centuries, fell under the sweeping scythe of the French Revolution."—J. T. Bent, *Genoa*, ch. 11. —See, also, GENOA: A. D. 1407-1448.

16-17th Centuries.—**Monetary effects of the Discovery of America.**—"From 1492, the year of the discovery of the New World, to 1500, it is doubtful whether [the mines of Mexico and Peru] . . . yielded on an average a prey of more than 1,500,000 francs (£60,000) a year. From 1500 to 1545, if we add to the treasure produced from the mines the amount of plunder found in the capital of the Montezumas, Ténochtitlan (now the city of Mexico), as well as in the temples and palaces of the kingdom of the Incas, the gold and silver drawn from America did not exceed an average of sixteen million francs (£640,000) a year. From 1545, the scene changes. In one of the gloomiest deserts on the face of the globe, in the midst of the rugged and inhospitable mountain scenery of Upper Peru, chance revealed to a poor Indian, who was guarding a flock of llamas, a mine of silver of incomparable richness. A crowd of miners was instantly attracted by the report of the rich deposits of ore spread over the sides of this mountain of Potoc-chi—a name which for euphony the European nations have since changed to Potosi. The exportation of the precious metals from America to Europe now rose rapidly to an amount which equalled, weight for weight, sixty millions of francs (£2,400,000) of our day, and it afterwards rose even to upwards of eighty millions. At that time such a mass of gold and silver represented a far greater amount of riches than at present. Under the influence of so extraordinary a supply, the value of these precious metals declined in Europe, in comparison with every other production of human industry, just as would be the case with iron or lead, if mines were discovered which yielded those metals in superabundance, as compared with their present consumption, and at a much less cost of labour than previously, just in fact as occurs in the case of manufactures of every kind, whenever, by improved processes, or from natural causes of a novel kind, they can be produced in unusual quantities, and at a great reduction of cost. This fall in the value of gold and silver, in comparison with all other productions, revealed itself by the increased quantity of coined metal

which it was necessary to give in exchange for the generality of other articles. And it was thus that the working of the mines of America had necessarily for effect a general rise of prices, in other words, it made all other commodities dearer. The fall in the value of the precious metals, or that which means the same thing, the general rise of prices, does not appear to have been very great, out of Spain, till after the middle of the 16th century. Shortly after the commencement of the 17th century, the effects of the productiveness of the new mines and of the diminished cost of working them were realised in all parts of Europe. For the silver, which had been extracted in greater proportion than the gold, and on more favourable terms, the fall in value had been in the proportion of 1 to 3. In transactions where previously one pound of silver, or a coin containing a given quantity of this metal, had sufficed, henceforth three were required. . . . After having been arrested for awhile in this downward course, and even after having witnessed for a time a tendency to an upward movement, the fall in the value of the precious metals, and the corresponding rise in prices, resumed their course, under the influence of the same causes, until towards the end of the 18th century, without however manifesting their influence so widely or intensely as had been witnessed after the first development of the great American mines. We find, as the result, that during the first half of the 19th century, the value of silver fell to about the sixth of what it was before the discovery of America, when compared with the price of corn."—M. Chevalier, *On the Probable Fall in the Value of Gold* (tr. by Cobden), sect. 1, ch. 1.

17th Century.—**The Bank of Amsterdam.**—"In 1609, the great Bank of Amsterdam was founded, and its foundation not only testifies to the wealth of the republic, but marks an epoch in the commercial history of Northern Europe. Long before this period, banks had been established in the Italian cities, but, until late in the history of the Bank of England, which was not founded until nearly a century later, nothing was known on such a scale as this. It was established to meet the inconvenience arising from the circulation of currency from all quarters of the globe, and to accommodate merchants in their dealings. Any one making a deposit of gold or silver received notes for the amount, less a small commission, and these notes commanded a premium in all countries. Before the end of the century its deposits of this character amounted to one hundred and eighty million dollars, an amount of treasure which bewildered financiers in every other part of Europe."—D. Campbell, *The Puritan in Holland, England, and America*, v. 2, pp. 323-324.

17th Century.—**Indian Money used in the American Colonies.**—Sea shells, strung or embroidered on belts and garments, formed the "wampum" which was the money of the North American Indians (see WAMPUM). "Tradition gives to the Narragansetts the honor of inventing these valued articles, valuable both for use and exchange. This tribe was one of the most powerful, and it is asserted that their commercial use of wampum gave them their best opportunities of wealth. The Long Island Indians manufactured the beads in large quantities and then were forced to pay them away in tribute to the

Mohawks and the fiercer tribes of the interior. Furs were readily exchanged for these trinkets, which carried a permanent value, through the constancy of the Indian desire for them. The holder of wampum always compelled trade to come to him. After the use of wampum was established in colonial life, contracts were made payable at will in wampum, beaver, or silver. . . . The use began in New England in 1627. It was a legal tender until 1661, and for more than three quarters of a century the wampum was current in small transactions. For more than a century, indeed, this currency entered into the intercourse of Indian and colonist. . . . Labor is a chief factor in civilized society and the labor of the Indian was made available through wampum. As Winthrop shows, 10,000 beaver skins annually came to the Dutch from the Great Lake. The chase was the primitive form of Indian industry and furs were the most conspicuous feature of foreign trade, as gold is to-day, but wampum played a much larger part in the vital trade of the time. Wampum, or the things it represented, carried deer meat and Indian corn to the New England men. Corn and pork went for fish; fish went for West India rum, molasses, and the silver which Europe coveted. West India products, or the direct exchange of fish with the Catholic countries of Europe, brought back the goods needed to replenish and extend colonial industries and trade. . . . As long as the natives were active and furs were plenty, there appears to have been no difficulty in passing any quantity of wampum in common with other currencies. The Bay annulled its statutes, making the beads a legal tender in 1661. Rhode Island and Connecticut followed this example soon after. . . . New York continued the beads in circulation longer than the regular use prevailed in New England. In 1693 they were recognized in the definite rates of the Brooklyn ferry. They continued to be circulated in the more remote districts of New England through the century, and even into the beginning of the eighteenth."—W. B. Weedon, *Indian Money as a Factor in New Eng. Civilization*, pp. 5-30.

17th Century.—Colonial Coinage in America.—"The earliest coinage for America is said to have been executed in 1612, when the Virginia Company was endeavoring to establish a Colony on the Summer Islands (the Bermudas). This coin was of the denomination of a shilling, and was struck in brass." The "pine-tree" money of Massachusetts "was instituted by the Colonial Assembly in 1652, after the fall of Charles I. . . . This coinage was not discontinued until 1686; yet they appear to have continued the use of the same date, the shillings, sixpences, and threepences all bearing the date 1652, while the twopenny pieces are all dated 1662. . . . After the suppression of their mint, the Colony of Massachusetts issued no more coins until after the establishment of the Confederacy. . . . The silver coins of Lord Baltimore, Lord Proprietor of Maryland, were the shilling, sixpence, and fourpence, or groat."—J. R. Snowden, *Description of Ancient and Modern Coins*, pp. 85-87.—See PINE TREE MONEY.

17-18th Centuries.—Banking in Great Britain.—"Origin and influence of the Bank of England."—"In the reign of William old men were still living who could remember the days when there was not a single banking house in the city

of London. So late as the time of the Restoration every trader had his own strong box in his own house, and, when an acceptance was presented to him, told down the crowns and Caroluses on his own counter. But the increase of wealth had produced its natural effect, the subdivision of labour. Before the end of the reign of Charles II. a new mode of paying and receiving money had come into fashion among the merchants of the capital. A class of agents arose, whose office was to keep the cash of the commercial houses. This new branch of business naturally fell into the hands of the goldsmiths, who were accustomed to traffic largely in the precious metals, and who had vaults in which great masses of bullion could lie secure from fire and from robbers. It was at the shops of the goldsmiths of Lombard Street that all the payments in coin were made. Other traders gave and received nothing but paper. This great change did not take place without much opposition and clamour. . . . No sooner had banking become a separate and important trade, than men began to discuss with earnestness the question whether it would be expedient to erect a national bank. . . . Two public banks had long been renowned throughout Europe, the Bank of Saint George at Genoa, and the Bank of Amsterdam. . . . Why should not the Bank of London be as great and as durable as the Banks of Genoa and Amsterdam? Before the end of the reign of Charles II. several plans were proposed, examined, attacked and defended. Some pamphleteers maintained that a national bank ought to be under the direction of the King. Others thought that the management ought to be entrusted to the Lord Mayor, Alderman and Common Council of the capital. After the Revolution the subject was discussed with an animation before unknown. . . . A crowd of plans, some of which resemble the fancies of a child or the dreams of a man in a fever, were pressed on the government. Pre-eminently conspicuous among the political mountebanks, whose busy faces were seen every day in the lobby of the House of Commons, were John Briscoe and Hugh Chamberlayne, two projectors worthy to have been members of that Academy which Gulliver found at Lagado. These men affirmed that the one cure for every distemper of the State was a Land Bank. A Land Bank would work for England miracles such as had never been wrought for Israel. . . . These blessed effects the Land Bank was to produce simply by issuing enormous quantities of notes on landed security. The doctrine of the projectors was that every person who had real property ought to have, besides that property, paper money to the full value of that property. Thus, if his estate was worth two thousand pounds, he ought to have his estate and two thousand pounds in paper money. Both Briscoe and Chamberlayne treated with the greatest contempt the notion that there could be an over-issue of paper as long as there was, for every ten pound note, a piece of land in the country worth ten pounds. . . . All the projectors of this busy time, however, were not so absurd as Chamberlayne. One among them, William Paterson, was an ingenious, though not always a judicious speculator. Of his early life little is known except that he was a native of Scotland, and that he had been in the West Indies. . . . This man submitted to the government, in 1691, a plan of

a national bank; and his plan was favourably received both by statesmen and by merchants. But years passed away; and nothing was done, till, in the spring of 1694, it became absolutely necessary to find some new mode of defraying the charges of the war. Then at length the scheme devised by the poor and obscure Scottish adventurer was taken up in earnest by Montague [Charles Montague, then one of the lords of the treasury and subsequently Chancellor of the Exchequer]. With Montague was closely allied Michael Godfrey. . . . Michael was one of the ablest, most upright and most opulent of the merchant princes of London. . . . By these two distinguished men Paterson's scheme was fathered. Montague undertook to manage the House of Commons, Godfrey to manage the City. An approving vote was obtained from the Committee of Ways and Means; and a bill, the title of which gave occasion to many sarcasms, was laid on the table. It was indeed not easy to guess that a bill, which purported only to impose a new duty on tonnage for the benefit of such persons as should advance money towards carrying on the war, was really a bill creating the greatest commercial institution that the world had ever seen. The plan was that £1,200,000 should be borrowed by the government on what was then considered as the moderate interest of eight per cent. In order to induce capitalists to advance the money promptly on terms so favourable to the public, the subscribers were to be incorporated by the name of the Governor and Company of the Bank of England. The corporation was to have no exclusive privilege, and was to be restricted from trading in any thing but bills of exchange, bullion and forfeited pledges. As soon as the plan became generally known, a paper war broke out. . . . All the goldsmiths and pawnbrokers set up a howl of rage. Some discontented Tories predicted ruin to the monarchy. . . . Some discontented Whigs, on the other hand, predicted ruin to our liberties. . . . The power of the purse, the one great security for all the rights of Englishmen, will be transferred from the House of Commons to the Governor and Directors of the new Company. This last consideration was really of some weight, and was allowed to be so by the authors of the bill. A clause was therefore most properly inserted which inhibited the Bank from advancing money to the Crown without authority from Parliament. Every infraction of this salutary rule was to be punished by forfeiture of three times the sum advanced; and it was provided that the King should not have power to remit any part of the penalty. The plan, thus amended, received the sanction of the Commons more easily than might have been expected from the violence of the adverse clamour. In truth, the Parliament was under duress. Money must be had, and could in no other way be had so easily. . . . The bill, however, was not safe when it had reached the Upper House," but it was passed, and received the royal assent. "In the City the success of Montague's plan was complete. It was then at least as difficult to raise a million at eight per cent. as it would now be to raise forty millions at four per cent. It had been supposed that contributions would drop in very slowly; and a considerable time had therefore been allowed by the Act. This indulgence was not needed. So popular was the new investment that on the day on which the books were

opened £300,000 were subscribed; 300,000 more were subscribed during the next 48 hours; and, in ten days, to the delight of all the friends of the government, it was announced that the list was full. The whole sum which the Corporation was bound to lend to the State was paid into the Exchequer before the first instalment was due. Somers gladly put the Great Seal to a charter framed in conformity with the terms prescribed by Parliament; and the Bank of England commenced its operations in the house of the Company of Grocers. . . . It soon appeared that Montague had, by skilfully availing himself of the financial difficulties of the country, rendered an inestimable service to his party. During several generations the Bank of England was emphatically a Whig body. It was Whig, not accidentally, but necessarily. It must have instantly stopped payment if it had ceased to receive the interest on the sum which it had advanced to the government; and of that interest James would not have paid one farthing."—Lord Macaulay, *Hist. of Eng., ch. 20*—"For a long time the Bank of England was the focus of London Liberalism, and in that capacity rendered to the State inestimable services. In return for these substantial benefits the Bank of England received from the Government, either at first or afterwards, three most important privileges. First, The Bank of England had the exclusive possession of the Government balances. In its first period . . . the Bank gave credit to the Government, but afterwards it derived credit from the Government. There is a natural tendency in men to follow the example of the Government under which they live. The Government is the largest, most important, and most conspicuous entity with which the mass of any people are acquainted; its range of knowledge must always be infinitely greater than the average of their knowledge, and therefore, unless there is a conspicuous warning to the contrary, most men are inclined to think their Government right, and, when they can, to do what it does. Especially in money matters a man might fairly reason—"If the Government is right in trusting the Bank of England with the great balance of the nation, I cannot be wrong in trusting it with my little balance." Second. The Bank of England had, till lately, the monopoly of limited liability in England. The common law of England knows nothing of any such principle. It is only possible by Royal Charter or Statute Law. And by neither of these was any real bank . . . permitted with limited liability in England till within these few years. . . . Thirdly. The Bank of England had the privilege of being the sole joint stock company permitted to issue bank notes in England. Private London bankers did indeed issue notes down to the middle of the last century, but no joint stock company could do so. The explanatory clause of the Act of 1742 sounds most curiously to our modern ears. . . . 'It is the true intent and meaning of the said Act that no other bank shall be created, established, or allowed by Parliament, and that it shall not be lawful for any body politic or corporate whatsoever created or to be created, or for any other persons whatsoever united or to be united in covenants or partnership exceeding the number of six persons in that part of Great Britain called England, to borrow, owe, or take up any sum or sums of money on their bills or notes payable on demand or at any less time than six months

from the borrowing thereof during the continuance of such said privilege to the said governor and company, who are hereby declared to be and remain a corporation with the privilege of exclusive banking, as before recited.' To our modern ears these words seem to mean more than they did. The term banking was then applied only to the issue of notes and the taking up of money on bills on demand. Our present system of deposit banking, in which no bills or promissory notes are issued, was not then known on a great scale, and was not called banking. But its effect was very important. It in time gave the Bank of England the monopoly of the note issue of the Metropolis. It had at that time no branches, and so it did not compete for the country circulation. But in the Metropolis, where it did compete, it was completely victorious. No company but the Bank of England could issue notes, and unincorporated individuals gradually gave way, and ceased to do so. Up to 1844 London private bankers might have issued notes if they pleased, but almost a hundred years ago they were forced out of the field. The Bank of England had so long had a practical monopoly of the circulation, that it is commonly believed always to have had a legal monopoly. And the practical effect of the clause went further: it was believed to make the Bank of England the only joint stock company that could receive deposits, as well as the only company that could issue notes. The gift of 'exclusive banking' to the Bank of England was read in its most natural modern sense: it was thought to prohibit any other banking company from carrying on our present system of banking. After joint stock banking was permitted in the country, people began to inquire why it should not exist in the Metropolis too? And then it was seen that the words I have quoted only forbid the issue of negotiable instruments, and not the receiving of money when no such instrument is given. Upon this construction, the London and Westminster Bank and all our older joint stock banks were founded. But till they began, the Bank of England had among companies not only the exclusive privilege of note issue, but that of deposit banking too. It was in every sense the only banking company in London. With so many advantages over all competitors, it is quite natural that the Bank of England should have far outstripped them all. . . . All the other bankers grouped themselves round it, and lodged their reserve with it. Thus our one-reserve system of banking was not deliberately founded upon definite reasons; it was the gradual consequence of many singular events, and of an accumulation of legal privileges on a single bank which has now been altered, and which no one would now defend. . . . For more than a century after its creation (notwithstanding occasional errors) the Bank of England, in the main, acted with judgment and with caution. Its business was but small as we should now reckon, but for the most part it conducted that business with prudence and discretion. In 1696, it had been involved in the most serious difficulties, and had been obliged to refuse to pay some of its notes. For a long period it was in wholesome dread of public opinion, and the necessity of retaining public confidence made it cautious. But the English Government removed that necessity. In 1797, Mr. Pitt feared that he might not be able to obtain sufficient specie for foreign payments, in conse-

quence of the low state of the Bank reserve, and he therefore required the Bank not to pay in cash. He removed the preservative apprehension which is the best security of all Banks. For this reason the period under which the Bank of England did not pay gold for its notes — the period from 1797 to 1819 — is always called the period of the Bank 'restriction.' As the Bank during that period did not perform, and was not compelled by law to perform, its contract of paying its notes in cash, it might apparently have been well called the period of Bank license. But the word 'restriction' was quite right, and was the only proper word as a description of the policy of 1797. Mr. Pitt did not say that the Bank of England need not pay its notes in specie; he 'restricted' them from doing so; he said that they must not. In consequence, from 1797 to 1844 (when a new era begins), there never was a proper caution on the part of the Bank directors. At heart they considered that the Bank of England had a kind of charmed life, and that it was above the ordinary banking anxiety to pay its way. And this feeling was very natural."—W. Bagehot, *Lombard Street*, ch. 3-4.

17-18th Centuries.—Early Paper issues and Banks in the American Colonies.—"Previous to the Revolutionary War paper money was issued to a greater or less extent by each one of the thirteen colonies. The first issue was by Massachusetts in 1690, to aid in fitting out the expedition against Canada. Similar issues had been made by New Hampshire, Rhode Island, Connecticut, New York, and New Jersey, previous to the year 1711. South Carolina began to emit bills in 1712, Pennsylvania in 1723, Maryland in 1734, Delaware in 1739, Virginia in 1755, and Georgia in 1760. Originally the issues were authorized to meet the necessities of the colonial treasuries. In Massachusetts, in 1715, as a remedy for the prevailing embarrassment of trade, a land bank was proposed with the right to issue circulating notes secured by land. . . . The plan for the land bank was defeated, but the issue of paper money by the treasury was authorized to the extent of £50,000, to be loaned on good mortgages in sums of not more than £500, nor less than £50, to one person. The rate of interest was five per cent., payable with one-fifth of the principal annually. . . . In 1733 an issue of bills to the amount of £110,000 was made by the merchants of Boston, which were to be redeemed at the end of ten years, in silver, at the rate of 19 shillings per ounce. In 1739, the commercial and financial embarrassment still continuing, another land bank was started in Massachusetts. . . . A specie bank was also formed in 1739, by Edward Hutchinson and others, which issued bills to the amount of £120,000, redeemable in fifteen years in silver, at 20 shillings per ounce, or gold pro rata. The payment of these notes was guaranteed by wealthy and responsible merchants. These notes, and those of a similar issue in 1733, were largely hoarded and did not pass generally into circulation. In 1740 Parliament passed a bill to extend the act of 1720, known as the bubble act, to the American colonies, with the intention of breaking up all companies formed for the purpose of issuing paper money. Under this act both the

land bank and the specie bank were forced to liquidate their affairs, though not without some resistance on the part of the former. . . . The paper money of the colonies, whether issued by them or by the loan banks, depreciated almost without exception as the amounts in circulation increased. . . . The emission of bills by the colonies and the banks was not regarded with favor by the mother country, and the provincial governors were as a general thing opposed to these issues. They were consequently frequently embroiled with their legislatures."—J. J. Knox, *United States Notes*, pp. 1-5.

17-19th Centuries.—Creation of the principal European Banks.—"The Bank of Vienna was founded as a bank of deposit in 1703, and as a bank of issue in 1793; the Banks of Berlin and Breslau in 1765 with state sanction; the Austrian National Bank in 1816. In St. Petersburg three banks were set up; the Loan Bank in 1772, advancing loans on deposits of bullion and jewels; the Assignment Bank in 1768 (and in Moscow, 1770), issuing government paper money; the Aid Bank in 1797, to relieve estates from mortgage and advance money for improvements. The Commercial Bank of Russia was founded in 1818. The Bank of Stockholm was founded in 1688. The Bank of France was founded first in 1803 and reorganised in 1806, when its capital was raised to 90,000,000 francs, held in 90,000 shares of 1,000 francs. It is the only authorised source of paper money in France, and is intimately associated with the government."—H. de B. Gibbins, *Hist. of Commerce in Europe*, bk. 3, ch. 4.

A. D. 1775-1780.—The Continental Currency of the American Revolution.—"The colonies . . . went into the Revolutionary War, many of them with paper already in circulation, all of them making issues for the expenses of military preparations. The Continental Congress, having no power to tax, and its members being accustomed to paper issues as the ordinary form of public finance, began to issue bills on the faith of the 'Continent,' Franklin earnestly approving. The first issue was for 300,000 Spanish dollars, redeemable in gold or silver, in three years, ordered in May and issued in August, 1775. Paper for nine million dollars was issued before any depreciation began. The issues of the separate colonies must have affected it, but the popular enthusiasm went for something. Pelatiah Webster, almost alone as it seems, insisted on taxation, but a member of Congress indignantly asked if he was to help tax the people when they could go to the printing-office and get a cartload of money. In 1776, when the depreciation began, Congress took harsh measures to try to sustain the bills. Committees of safety also took measures to punish those who 'forestalled' or 'engrossed,' these being the terms for speculators who bought up for a rise."—W. G. Sumner, *Hist. of Am. Currency*, pp. 43-44.—"During the summer of 1780 this wretched 'Continental' currency fell into contempt. As Washington said, it took a wagon-load of money to buy a wagon-load of provisions. At the end of the year 1778, the paper dollar was worth sixteen cents in the northern states and twelve cents in the south. Early in 1780 its value had fallen to two cents, and before the end of the year it took ten paper dollars to make a cent. In October, Indian corn sold wholesale in Boston for \$150 a bushel, butter was \$12 a pound, tea

\$90, sugar \$10, beef \$8, coffee \$12, and a barrel of flour cost \$1,575. Samuel Adams paid \$2,000 for a hat and suit of clothes. The money soon ceased to circulate, debts could not be collected, and there was a general prostration of credit. To say that a thing was 'worth a Continental' became the strongest possible expression of contempt."—J. Fiske, *The Am. Revolution*, ch. 13 (v. 2).—Before the close of the year 1780, the Continental Currency had ceased to circulate. Attempts were subsequently made to have it funded or redeemed, but without success. See UNITED STATES OF AM.: A. D. 1780 (JANUARY—APRIL).

A. D. 1780-1784.—The Pennsylvania Bank and the Bank of North America.—"The Pennsylvania Bank, which was organized in Philadelphia during the Revolutionary War, was founded for the purpose of facilitating the operations of the Government in transporting supplies for the army. It began its useful work in 1780, and continued in existence until after the close of the war; finally closing its affairs toward the end of the year 1784. But the need was felt of a national bank which should not only aid the Government on a large scale by its money and credit, but should extend facilities to individuals, and thereby benefit the community as well as the state. Through the influence and exertion of Robert Morris, then Superintendent of Finance for the United States, the Bank of North America, at Philadelphia, was organized with a capital of \$400,000. It was incorporated by Congress in December, 1781, and by the State of Pennsylvania a few months afterward. Its success was immediate and complete. It not only rendered valuable and timely aid to the United States Government and to the State of Pennsylvania, but it greatly assisted in restoring confidence and credit to the commercial community, and afforded facilities to private enterprise that were especially welcome. . . . The success of the Bank of North America, and the advantages which the citizens of Philadelphia enjoyed from the facilities it offered them, naturally suggested the founding of a similar enterprise in the city of New York." The Bank of New York was accordingly founded in 1784.—H. W. Domett, *Hist. of the Bank of New York*, ch. 1.

A. D. 1789-1796.—The Assignats of the French Revolution.—"The financial embarrassments of the government in 1789 were extreme. Many taxes had ceased to be productive; the confiscated estates not only yielded no revenue but caused a large expense, and, as a measure of resource, the finance committee of the Assembly reported in favor of issues based upon the confiscated lands. But the bitter experience of France through the Mississippi schemes of John Law, 1719-21, made the Assembly and the nation hesitate. . . . Necker, the Minister, stood firm in his opposition to the issue of paper money, even as a measure of resource; but the steady pressure of fiscal exigencies, together with the influence of the fervid orators of the Assembly, gained a continually increasing support to the proposition of the committee. . . . The leaders of the Assembly were secretly actu-

ated by a political purpose, viz., by widely distributing the titles to the confiscated lands (for such the paper money in effect was) to commit the thrifty middle class of France to the principles and measures of the revolution. . . . Oratory, the force of fiscal necessities, the half-confessed political design, prevailed at last over the warnings of experience; and a decree passed the Assembly authorizing an issue of notes to the value of four hundred million francs, on the security of the public lands. To emphasize this security the title of 'assignats' was applied to the paper. . . . The issue was made; the assignats went into circulation; and soon came the inevitable demand for more. . . . The decree for a further issue of eight hundred millions passed, September, 1790. Though the opponents of the issue had lost heart and voice, they still polled 423 votes against 508. To conciliate a minority still so large, contraction was provided for by requiring that the paper when paid into the Treasury should be burned, and the decree contained a solemn declaration that in no case should the amount exceed twelve hundred millions. June 19, 1791, the Assembly, against feeble resistance, violated this pledge and authorized a further issue of six hundred millions. Under the operation of Gresham's Law, specie now began to disappear from circulation. . . . And now came the collapse of French industry. . . . 'Everything that tariffs and custom-houses could do was done. Still the great manufactories of Normandy were closed; those of the rest of the kingdom speedily followed, and vast numbers of workmen, in all parts of the country, were thrown out of employment. . . . In the spring of 1791 no one knew whether a piece of paper money, representing 100 francs, would, a month later, have a purchasing power of 100 francs, or 90 francs, or 80, or 60. The result was that capitalists declined to embark their means in business. Enterprise received a mortal blow. Demand for labor was still further diminished. The business of France dwindled into a mere living from hand to mouth.' . . . Towards the end of 1794 there had been issued 7,000 millions in assignats; by May, 1795, 10,000 millions; by the end of July, 16,000 millions; by the beginning of 1796, 45,000 millions, of which 36,000 millions were in actual circulation. M. Bresson gives the following table of depreciation: 24 livres in coin were worth in assignats April 1, 1795, 238; May 1, 299; June 1, 439; July 1, 808; Aug. 1, 807; Sept. 1, 1,101; Oct. 1, 1,205; Nov. 1, 2,588; Dec. 1, 3,575; Jan. 1, 1796, 4,658; Feb. 1, 5,337. At the last 'an assignat professing to be worth 100 francs was commonly exchanged for 5 sous 6 deniers: in other words, a paper note professing to be worth £4 sterling passed current for less than 3d. in money.' The downward course of the assignats had unquestionably been accelerated by the extensive counterfeiting of the paper in Belgium, Switzerland, and England. . . . Now appears that last resort of finance under a depreciating paper: an issue under new names and new devices. . . . Territorial Mandates were ordered to be issued for assignats at 30:1, the mandates to be directly exchangeable for land, at the will of the holder, on demand. . . . For a brief time after the first limited emission, the mandates rose as high as 80 per cent. of their nominal value; but soon additional issues sent them down even more rapidly than

the assignats had fallen."—F. A. Walker, *Money*, pt. 2, ch. 16.

A. D. 1791-1816.—The First Bank of the United States.—On the organization of the government of the United States, under its federal constitution, in 1789 and 1790, the lead in constructive statesmanship was taken, as is well known, by Alexander Hamilton. His plan "included a financial institution to develop the national resources, strengthen the public credit, aid the Treasury Department in its administration, and provide a secure and sound circulating medium for the people. On December 13, 1790, he sent into Congress a report on the subject of a national bank. The Republican party, then in the minority, opposed the plan as unconstitutional, on the ground that the power of creating banks or any corporate body had not been expressly delegated to Congress, and was therefore not possessed by it. Washington's cabinet was divided; Jefferson opposing the measure as not within the implied powers, because it was an expediency and not a paramount necessity. Later he used stronger language, and denounced the institution as 'one of the most deadly hostility existing against the principles and form of our Constitution,' nor did he ever abandon these views. There is the authority of Mr. Gallatin for saying that Jefferson 'died a decided enemy to our banking system generally, and specially to a bank of the United States.' But Hamilton's views prevailed. Washington, who in the weary years of war had seen the imperative necessity of some national organization of the finances, after mature deliberation approved the plan, and on February 25, 1791, the Bank of the United States was incorporated. The capital stock was limited to twenty-five thousand shares of four hundred dollars each, or ten millions of dollars, payable one fourth in gold and silver, and three fourths in public securities bearing an interest of six and three per cent. The stock was immediately subscribed for, the government taking five thousand shares, two millions of dollars, under the right reserved in the charter. The subscription of the United States was paid in ten equal annual instalments. A large proportion of the stock was held abroad, and the shares soon rose above par. . . . Authority was given the bank to establish offices of discount and deposit within the United States. The chief bank was placed in Philadelphia and branches were established in eight cities, with capitals in proportion to their commercial importance. In 1809 the stockholders of the Bank of the United States memorialized the government for a renewal of their charter, which would expire on March 4, 1811; and on March 9, 1809, Mr. Gallatin sent in a report in which he reviewed the operations of the bank from its organization. Of the government shares, five million dollars at par, two thousand four hundred and ninety-three shares were sold in 1796 and 1797 at an advance of 25 per cent., two hundred and eighty-seven in 1797 at an advance of twenty per cent., and the remaining 2,220 shares in 1802, at an advance of 45 per cent., making together, exclusive of the dividends, a profit of \$671,680 to the United States. Eighteen thousand shares of the bank stock were held abroad, and seven thousand shares, or a little more than one fourth part of the capital, in the United States. A table

of all the dividends made by the bank showed that they had on the average been at the rate of $8\frac{1}{2}$ (precisely $8\frac{1}{4}$) per cent. a year, which proved that the bank had not in any considerable degree used the public deposits for the purpose of extending its discounts. From a general view of the debits and credits, as presented, it appeared that the affairs of the Bank of the United States, considered as a moneyed institution, had been wisely and skilfully managed. The advantages derived by the government Mr. Gallatin stated to be, 1, safe-keeping of the public moneys; 2, transmission of the public moneys; 3, collection of the revenue; 4, loans. The strongest objection to the renewal of the charter lay in the great portion of the bank stock held by foreigners. Not on account of any influence over the institution, since they had no vote; but because of the high rate of interest payable by America to foreign countries. . . . Congress refused to prolong its existence and the institution was dissolved. Fortunately for the country, it wound up its affairs with such deliberation and prudence as to allow of the interposition of other bank credits in lieu of those withdrawn, and thus prevented a serious shock to the interests of the community. In the twenty years of its existence from 1791 to 1811 its management was irreproachable. The immediate effect of the refusal of Congress to recharter the Bank of the United States was to bring the Treasury to the verge of bankruptcy. The interference of Parish, Girard, and Astor alone saved the credit of the government. . . . Another immediate effect of the dissolution of the bank was the withdrawal from the country of the foreign capital invested in the bank, more than seven millions of dollars. This amount was remitted, in the twelve months preceding the war, in specie. Specie was at that time a product foreign to the United States, and by no means easy to obtain. . . . The notes of the Bank of the United States, payable on demand in gold and silver at the counters of the bank, or any of its branches, were, by its charter, receivable in all payments to the United States; but this quality was also stripped from them on March 19, 1812, by a repeal of the act according it. To these disturbances of the financial equilibrium of the country was added the necessary withdrawal of fifteen millions of bank credit and its transfer to other institutions. This gave an extraordinary impulse to the establishment of local banks, each eager for a share of the profits. The capital of the country, instead of being concentrated, was dissipated. Between January 1, 1811, and 1815, one hundred and twenty new banks were chartered, and forty millions of dollars were added to the banking capital. To realize profits, the issues of paper were pushed to the extreme of possible circulation. Meanwhile New England kept aloof from the nation. The specie in the vaults of the banks of Massachusetts rose from \$1,706,000 on June 1, 1811, to \$7,326,000 on June 1, 1814. . . . The suspension of the banks was precipitated by the capture of Washington. It began in Baltimore, which was threatened by the British, and was at once followed in Philadelphia and New York. Before the end of September all the banks south and west of New England had suspended specie payment. . . . The depression of the local currencies ranged from seven to twenty-five per cent. . . . In November the Treasury Depart-

ment found itself involved in the common disaster. The refusal of the banks, in which the public moneys were deposited, to pay their notes or the drafts upon them in specie deprived the government of its gold and silver; and their refusal, likewise, of credit and circulation to the issues of banks in other States deprived the government also of the only means it possessed for transferring its funds to pay the dividends on the debt and discharge the treasury notes. . . . On October 14, 1814, Alexander J. Dallas, Mr. Gallatin's old friend, who had been appointed Secretary of the Treasury on the 6th of the same month, in a report of a plan to support the public credit, proposed the incorporation of a national bank. A bill was passed by Congress, but returned to it by Madison with his veto on January 15, 1815. . . . Mr. Dallas again, as a last resort, insisted on a bank as the only means by which the currency of the country could be restored to a sound condition. In December, 1815, Dallas reported to the Committee of the House of Representatives on the national currency, of which John C. Calhoun was chairman, a plan for a national bank, and on March 3, 1816, the second Bank of the United States was chartered by Congress. The capital was thirty-five millions, of which the government held seven millions in seventy thousand shares of one hundred dollars each. Mr. Madison approved the bill. . . . The second national bank of the United States was located at Philadelphia, and chartered for twenty years."—J. A. Stevens, *Albert Gallatin*, ch. 6.

A. D. 1817-1833.—The Second Bank of the United States and the war upon it.—“On the 1st of January, 1817, the bank opened for business, with the country on the brink of a great monetary crisis, but ‘too late to prevent the crash which followed.’ The management of the bank during the first two years of its existence was far from satisfactory. It aggravated the troubles of the financial situation instead of relieving them. Specie payments were nominally resumed in 1817, but the insidious canker of inflation had eaten its way into the arteries of business, and in the crisis of 1819 came another suspension that lasted for two years. . . . It was only by a desperate effort that the bank finally weathered the storm brought on by its own mismanagement and that of the State Banks. After the recovery, a period of several years of prosperity followed, and the management of the bank was thoroughly reorganized and sound. From this time on until the great ‘Bank War’ its affairs seem to have been conducted with a view to performing its duty to the government as well as to its individual stockholders, and it rendered such aid to the public, directly, and indirectly, as entitled it to respect and fair treatment on the part of the servants of the people. . . . But the bank controversy was not yet over. It was about to be revived, and to become a prominent issue in a period of our national politics more distinguished for the bitterness of its personal animosities than perhaps any other in our annals. . . . As already said, the ten years following the revulsion of 1819-25 were years of almost unbroken prosperity. . . . The question of the continuance of the bank was not under discussion. In fact, scarcely any mention of the subject was made until President Jackson referred to it in his message of December, 1829.

In this message he reopened the question of the constitutionality of the bank, but the committee to which this portion of the message was referred in the House of Representatives made a report favorable to the institution. There seems no reason to doubt the honesty of Jackson's opinion that the bank was unconstitutional, and at first he probably had no feeling in the matter except that which sprang from his convictions on this point. Certain events, however, increased his hostility to the bank, and strengthened his resolution to destroy it. . . . When President Jackson first attacked the bank, the weapon he chiefly relied on was the alleged unconstitutionality of the charter."—D. Kinley, *The Independent Treasury of the U. S., ch. 1.*—The question of the rechartering of the Bank was made an issue in the presidential campaign of 1832, by Henry Clay. "Its disinterested friends in both parties strongly dissuaded Biddle [president of the Bank] from allowing the question of recharter to be brought into the campaign. Clay's advisers tried to dissuade him. The bank, however, could not oppose the public man on whom it depended most, and the party leaders deferred at last to their chief. Jackson never was more dictatorial and obstinate than Clay was at this juncture." Pending the election, a bill to renew the charter of the Bank was passed through both houses of Congress. The President promptly vetoed it. "The national republican convention met at Baltimore, December 12, 1831. It . . . issued an address, in which the bank question was put forward. It was declared that the President 'is fully and three times over pledged to the people to negative any bill that may be passed for rechartering the bank, and there is little doubt that the additional influence which he would acquire by a reelection would be employed to carry through Congress the extraordinary substitute which he has repeatedly proposed.' The appeal, therefore, was to defeat Jackson in order to save the bank. . . . Such a challenge as that could have but one effect on Jackson. It called every faculty he possessed into activity to compass the destruction of the bank. Instead of retiring from the position he had taken, the moment there was a fight to be fought, he did what he did at New Orleans. He moved his lines up to the last point he could command on the side towards the enemy. . . . The proceedings seemed to prove just what the anti-bank men had asserted: that the bank was a great monster, which aimed to control elections, and to set up and put down Presidents. The campaign of 1832 was a struggle between the popularity of the bank and the popularity of Jackson."—W. G. Sumner, *Andrew Jackson, ch. 11.*—Jackson was overwhelmingly elected, and feeling convinced that his war upon the Bank had received the approval of the people, he determined to remove the public deposits from its keeping on his own responsibility. "With this view he removed (in the spring of 1833) the Secretary of the Treasury, who would not consent to remove the deposits, and appointed William J. Duane, of Pennsylvania, in his place. He proved to be no more compliant than his predecessor. After many attempts to persuade him, the President announced to the Cabinet his final decision that the deposits must be removed. The Reasons given were that the law gave the Secretary, not Congress, control of the deposits, that

it was improper to leave them longer in a bank whose charter would so soon expire, that the Bank's funds had been largely used for political purposes, that its inability to pay all its depositors had been shown by its efforts to procure an extension of time from its creditors in Europe, and that its four government directors had been systematically kept from knowledge of its management. Secretary Duane refused either to remove the deposits or to resign his office, and pronounced the proposed removal unnecessary, unwise, vindictive, arbitrary, and unjust. He was at once removed from office, and Roger B. Taney, of Maryland, appointed in his place. The necessary Orders for Removal were given by Secretary Taney. It was not strictly a removal, for all previous deposits were left in the Bank, to be drawn upon until exhausted. It was rather a cessation. The deposits were afterwards made in various State banks, and the Bank of the United States was compelled to call in its loans. The commercial distress which followed in consequence probably strengthened the President in the end by giving a convincing proof of the Bank's power as an antagonist to the Government."—A. Johnston, *History of American Politics, ch. 13.*

A. D. 1837-1841.—The Wild Cat Banks of Michigan.—"Michigan became a State in January, 1837. Almost the first act of her State legislature was the passage of a general banking law under which any ten or more freeholders of any county might organize themselves into a corporation for the transaction of banking business. Of the nominal capital of a bank only ten per cent. in specie was required to be paid when subscriptions to the stock were made, and twenty per cent. additional in specie when the bank began business. For the further security of the notes which were to be issued as currency, the stockholders were to give first mortgages upon real estate, to be estimated at its cash value by at least three county officers, the mortgages to be filed with the auditor-general of the State. A bank commissioner was appointed to superintend the organization of the banks, and to attest the legality of their proceedings to the auditor-general, who, upon receiving such attestation, was to deliver to the banks circulating notes amounting to two and a half times the capital certified to as having been paid in. This law was passed in obedience to a popular cry that the banking business had become an 'odious monopoly' that ought to be broken up. Its design was to 'introduce free competition into what was considered a profitable branch of business heretofore monopolized by a few favored corporations.' Anybody was to be given fair opportunities for entering the business on equal terms with everybody else. The act was passed in March, 1837, and the legislature adjourned till November 9 following. Before the latter date arrived, in fact before any banks had been organized under the law, a financial panic seized the whole country. An era of wild speculation reached a climax, the banks in all the principal cities of the country suspended specie payments, and State legislatures were called together to devise remedies to meet the situation. That of Michigan was convened in special session in June, and its remedy for the case of Michigan was to leave the general banking law in force, and to add to it full authority for banks organized under it to

begin the business of issuing bills in a state of suspension—that is, to flood the State with an irredeemable currency, based upon thirty per cent. of specie and seventy per cent. of land mortgage bonds.”—*Cheap-Money Experiments (from the Century Mag.)*, pp. 75-77.—“Wild lands that had been recently bought of the government at one dollar and twenty-five cents an acre were now valued at ten or twenty times that amount, and lots in villages that still existed only on paper had a worth for banking purposes only limited by the conscience of the officer who was to take the securities. Any ten freeholders of a county must be poor indeed if they could not give sufficient security to answer the purpose of the general banking law. The requirement of the payment of thirty per cent. of the capital stock in specie was more difficult to be complied with. But as the payment was to be made to the bank itself, the difficulty was gotten over in various ingenious ways, which the author of the general banking law could hardly have anticipated. In some cases, stock notes in terms payable in specie, or the certificates of individuals which stated—untruly—that the maker held a specified sum of specie for the bank, were counted as specie itself; in others, a small sum of specie was paid in and taken out, and the process repeated over and over until the aggregate of payments equaled the sum required; in still others, the specie with which one bank was organized was passed from town to town and made to answer the purposes of several. By the first day of January, 1838, articles of association for twenty-one banks had been filed, making, with the banks before in existence, an average of one to less than five thousand people. Some of them were absolutely without capital, and some were organized by scheming men in New York and elsewhere, who took the bills away with them to circulate abroad, putting out none at home. For some, locations as inaccessible as possible were selected, that the bills might not come back to plague the managers. The bank commissioners say in their report for 1838, of their journey for inspection: ‘The singular spectacle was presented of the officers of the State seeking for banks in situations the most inaccessible and remote from trade, and finding at every step an increase of labor by the discovery of new and unknown organizations. Before they could be arrested the mischief was done: large issues were in circulation and no adequate remedy for the evil.’ One bank was found housed in a saw-mill, and it was said with pardonable exaggeration in one of the public papers, ‘Every village plat with a house, or even without a house, if it had a hollow stump to serve as a vault, was the site of a bank.’ . . . The governor, when he delivered his annual message in January, 1838, still had confidence in the general banking law, which he said ‘offered to all persons the privilege of banking under certain guards and restrictions,’ and he declared that ‘the principles upon which this law is based are certainly correct, destroying as they do the odious feature of a banking monopoly, and giving equal rights to all classes of the community.’ . . . The aggregate amount of private indebtedness had by this time become enormous, and the pressure for payment was serious and disquieting. . . . The people must have relief; and what relief could be so certain or so speedy as more banks and

more money? More banks therefore continued to be organized, and the paper current flowed out among the people in increasing volume. . . . At the beginning of 1839 the bank commissioners estimated that there were a million dollars of bills of insolvent banks in the hands of individuals and unavailable. Yet the governor, in his annual message delivered in January, found it a ‘source of unfeigned gratification to be able to congratulate [the legislature] on the prosperous condition to which our rising commonwealth has attained.’ . . . Then came stay laws, and laws to compel creditors to take lands at a valuation. They were doubtful in point of utility, and more than doubtful in point of morality and constitutionality. The federal bankrupt act of 1841 first brought substantial relief: it brought almost no dividends to creditors, but it relieved debtors from their crushing burdens and permitted them, sobered and in their right minds, to enter once more the fields of industry and activity. The extraordinary history of the attempt to break up an ‘odious monopoly’ in banking by making everybody a banker, and to create prosperity by unlimited issues of paper currency, was brought at length to a fit conclusion.”—T. M. Cooley, *Michigan*, ch. 13.—See WILD CAT BANKS.

A. D. 1838.—Free Banking Law of New York.—“On April 18th, 1838, the monopoly of banking under special charters, was brought to a close in the State of New York, by the passage of the act ‘to authorize the business of Banking.’ Under this law Associations for Banking purposes and Individual Bankers, were authorized to carry on the business of Banking, by establishing offices of deposit, discount and circulation. Subsequently a separate Department was organized at Albany, called ‘The Bank Department,’ with a Superintendent, who was charged with the supervision of all the banks in the State. Under this law institutions could be organized simply as banks of ‘discount and deposit,’ and might also add the issuing of a paper currency to circulate as money. At first the law provided that State and United States stocks for one-half, and bonds and mortgages for the other half, might be deposited as security for the circulating notes to be issued by Banks and individual Bankers. Upon a fair trial, however, it was found that when a bank failed, and the Bank Department was called upon to redeem the circulating notes of such bank, the mortgages could not be made available in time to meet the demand. . . . By an amendment of the law the receiving of mortgages as security for circulating notes was discontinued.”—E. G. Spaulding, *One Hundred Years of Progress in the Business of Banking*, p. 48.

A. D. 1844.—The English Bank Charter Act.—“By an act of parliament passed in 1838, conferring certain privileges on the Bank of England, it was provided that the charter granted to that body should expire in 1855, but the power was reserved to the legislature, on giving six months’ notice, to revise the charter ten years earlier. Availing themselves of this option, the government proposed a measure for regulating the entire monetary system of the country.”—W. C. Taylor, *Life and Times of Sir Robert Peel*, v. 3, ch. 7.—“The growth of commerce, and in particular the establishment of numerous joint-stock banks had given a dangerous impulse to issues of paper money, which

were not then restricted by law. Even the Bank of England did not observe any fixed proportion between the amount of notes which it issued and the amount of bullion which it kept in reserve. When introducing this subject to the House of Commons, Peel remarked that within the last twenty years there had been four periods when a contraction of issues had been necessary in order to maintain the convertibility of paper, and that in none of these had the Bank of England acted with vigour equal to the emergency. In the latest of these periods, from June of 1838 to June of 1839, the amount of bullion in the Bank had fallen to little more than £4,000,000, whilst the total of paper in circulation had risen to little less than £30,000,000. . . . Peel was not the first to devise the methods which he adopted. Mr. Jones Loyd, afterwards Lord Overstone, who impressed the learned with his tracts and the vulgar with his riches, had advised the principal changes in the law relating to the issue of paper money which Peel effected by the Bank Charter Act. These changes were three in number. The first was to separate totally the two departments of the Bank of England, the banking department and the issue department. The banking department was left to be managed as best the wisdom of the directors could devise for the profit of the shareholders. The issue department was placed under regulations which deprived the Bank of any discretion in its management, and may almost be said to have made it a department of the State. The second innovation was to limit the issue of paper by the Bank of England to an amount proportioned to the value of its assets. The Bank was allowed to issue notes to the amount of £14,000,000 against Government securities in its possession. The Government owed the Bank a debt of £11,000,000, besides which the Bank held Exchequer Bills. But the amount over £14,000,000 which the Bank could issue was not, henceforward, to be more than the equivalent of the bullion in its possession. By this means it was made certain that the Bank would be able to give coin for any of its notes which might be presented to it. The third innovation was to limit the issues of the country banks. The power of issuing notes was denied to any private or joint-stock banks founded after the date of the Act. It was recognized in those banks which already possessed it, but limited to a total sum of £8,500,000, the average quantity of such notes which had been in circulation during the years immediately preceding. It was provided that if any of the banks which retained this privilege should cease to exist or to issue notes, the Bank of England should be entitled to increase its note circulation by a sum equal to two-thirds of the amount of the former issues of the bank which ceased to issue paper. The Bank of England was required in this contingency to augment the reserve fund. By Acts passed in the succeeding year, the principles of the English Bank Charter Act were applied to Scotland and Ireland, with such modifications as the peculiar circumstances of those kingdoms required. The Bank Charter Act has ever since been the subject of voluminous and contradictory criticism, both by political economists and by men of business."—F. C. Montague, *Life of Sir Robert Peel*, ch. 8.

A. D. 1848-1893.—Production of the Precious Metals in the last half-century.—The Silver Question in the United States.—"The total (estimated) stock of gold in the world in 1848, was £560,000,000. As for the annual production, it had varied considerably since the beginning of the century [from £3,000,000 to £8,000,000]. Such was the state of things immediately preceding 1848. In that year the Californian discoveries took place, and these were followed by the discoveries in Australia in 1851 [see CALIFORNIA: A. D. 1848-1849; and AUSTRALIA: A. D. 1839-1855]. For these three years the annual average production is set down by the Economist at £9,000,000, but from this date the production suddenly rose to, for 1852, £27,000,000, and continued to rise till 1856, when it attained its maximum of £32,250,000. At this stage a decline in the returns occurred, the lowest point reached being in 1860, when they fell to £18,683,000, but from this they rose again, and for the last ten years [before 1873] have maintained an average of about £20,500,000; the returns for the year 1871 being £20,811,000. The total amount of gold added to the world's stock by this twenty years' production has been about £500,000,000, an amount nearly equal to that existing in the world at the date of the discoveries; in other words, the stock of gold in the world has been nearly doubled since that time."—J. E. Cairnes, *Essays in Political Economy*, pp. 160-161.—"The yearly average of gold production in the twenty-five years from 1851-75 was \$127,000,000. The yearly average product of silver for the same period was \$51,000,000. The average annual product of gold for the fifteen years from 1876 to 1890 declined to \$108,000,000; a minus of 15 per cent. The average annual product of silver for the same period increased to \$116,000,000; a plus of 127 per cent. There is the whole silver question."—L. R. Ehrich, *The Question of Silver*, p. 21.—"From 1793—the date of the first issue of silver coin by the United States—to 1834 the silver and the gold dollar were alike authorized to be received as legal tender in payment of debt, but silver alone circulated. Subsequently, however, silver was not used, except in fractional payments, or, since 1853, as a subsidiary coin. The silver coin, as a coin of circulation, had become obsolete. The reason why, prior to 1834, payments were made exclusively in silver, and subsequently to that date in gold, is found in the fact that prior to the legislation of 1834 . . . the standard silver coins were relatively the cheaper, and consequently circulated to the exclusion of the gold; while during the later period the standard gold coins were the cheaper, circulating to the exclusion of the silver. The Coinage Act of 1873, by which the coinage of the silver dollar was discontinued, became a law on February 12th of that year. The act of February 28, 1878, which passed Congress by a two-thirds vote over the veto of President Hayes, again provided for the coinage of a silver dollar of 412.5 grains, the silver bullion to be purchased at the market price by the Government, and the amount so purchased and coined not to be less than two millions of dollars per month. During the debate on this bill the charge was repeatedly made, in and out of Congress, that the previous act of 1873,

discontinuing the free coinage of the silver dollar, was passed surreptitiously. This statement has no foundation in fact. The report of the writer, who was then Deputy Comptroller of the Currency, transmitted to Congress in 1870 by the Secretary, three times distinctly stated that the bill accompanying it proposed to discontinue the issue of the silver dollar-piece. Various experts, to whom it had been submitted, approved this feature of the bill, and their opinions were printed by order of Congress."—J. J. Knox, *United States Notes*, ch. 10.—"The bill of 1878, generally spoken of as the 'Bland' bill, directed the secretary of the treasury to purchase not less than two million nor more than four million dollars' worth of silver bullion per month, to coin it into silver dollars, said silver dollars to be full legal tender at 'their nominal value.' Also, that the holder of ten or more of these silver dollars could exchange them for silver certificates, said certificates being 'receivable for customs, taxes, and all public dues.' The bill was pushed and passed by the efforts, principally, of the greenback inflationists and the representatives of the silver States. . . . Since 1878 [to 1891], 405,000,000 silver dollars have been coined. Of these 348,000,000 are still lying in the treasury vaults. No comment is needed. The Bland-Allison act did not hold up silver. In 1879 it was worth \$1.12 an ounce, in 1880 \$1.14, '81 \$1.13, '82 \$1.13, '83 \$1.11, '86 99 cents, until in '89 it reached 93½ cents an ounce. That is, in 1889 the commercial ratio was 22:1 and the coin value of the Bland-Allison silver dollar was 72 cents. In March, 1890, a bill was reported to the House by the committee of 'coinage, weights and measures,' based on a plan proposed by Secretary Windom. . . . The bill passed the House. The Senate passed it with an amendment making provision for free and unlimited coinage. It finally went to a conference committee which reported the bill that became a law, July 14, 1890. This bill directs the secretary of the treasury to purchase four and one-half million ounces of silver a month at the market price, to give legal tender treasury notes therefor, said notes being redeemable in gold or silver coin at the option of the government, 'it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio.' It was believed that this bill would raise the price of silver. . . . To-day [December 8, 1891] the silver in our dollar is actually worth 73 cents."—L. R. Ehrich, *The Question of Silver*, pp. 21-25.—See, also, UNITED STATES OF AM.: A. D. 1873, 1878, and 1890-1893.—In the summer of 1893, a financial crisis, produced in the judgment of the best informed by the operation of the silver-purchase law of 1890 (known commonly as the Sherman Act) became so serious that President Cleveland called a special session of Congress to deal with it. In his Message to Congress, at the opening of its session, the President said: "With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial fear and distrust have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of the frightened depositors. Surviving corporations

and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have involved every branch of business. I believe these things are principally chargeable to congressional legislation touching the purchase and coinage of silver by the General Government. This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle between the advocates of free silver coinage and those intending to be more conservative." A bill to repeal the act of July 14, 1890 (the Sherman law, so called), was passed by both houses and received the President's signature, Nov. 1, 1893.

A. D. 1853-1874.—The Latin Union and the Silver Question.—"The gold discoveries of California and Australia were directly the cause of the Latin Union. . . . In 1853, when the subsidiary silver of the United States had disappeared before the cheapened gold, we reduced the quantity of silver in the small coins sufficiently to keep them dollar for dollar below the value of gold. Switzerland followed this example of the United States in her law of January 31, 1860; but, instead of distinctly reducing the weight of pure silver in her small coins, she accomplished the same end by lowering the fineness of standard for these coins to 800 thousandths fine. . . . Meanwhile France and Italy had a higher standard for their coins than Switzerland, and as the neighboring states, which had the franc system of coinage in common, found each other's coins in circulation within their own limits, it was clear that the cheaper Swiss coins, according to Gresham's law, must drive out the dearer French and Italian coins, which contained more pure silver, but which passed current at the same nominal value. The Swiss coins of 800 thousandths fine began to pass the French frontier and to displace the French coins of a similar denomination; and the French coins were exported, melted, and recoined in Switzerland at a profit. This, of course, brought forth a decree in France (April 14, 1864), which prohibited the receipt of these Swiss coins at the public offices of France, the customs-offices, etc., and they were consequently refused in common trade among individuals. Belgium also, as well as Switzerland, began to think it necessary to deal with the questions affecting her silver small coins, which were leaving that country for the same reason that they were leaving Switzerland. Belgium then undertook to make overtures to France, in order that some concerted action might be undertaken by the four countries using the franc system—Italy, Belgium, France, and Switzerland—to remedy the evil to which all were exposed by the disappearance of their silver coin needed in every-day transactions. The discoveries of gold had forced a reconsideration of their coinage systems. In consequence of these overtures, a conference of delegates representing the Latin states just mentioned assembled in Paris, November 20, 1865. . . . The Conference, fully realizing the effects of the fall of gold in driving out their silver coins, agreed to establish a uniform coinage in the four countries,

on the essential principles adopted by the United States in 1853. They lowered the silver pieces of two francs, one franc, fifty centimes, and twenty centimes from a standard of 900 thousandths fine to a uniform fineness of 835 thousandths, reducing these coins to the position of a subsidiary currency. They retained for the countries of the Latin Union, however, the system of bimetallicism. Gold pieces of one hundred, fifty, twenty, ten, and five francs were to be coined, together with five-franc pieces of silver, and all at a standard of 900 thousandths fine. Free coinage at a ratio of 15½:1, was thereby granted to any holder of either gold or silver bullion who wanted silver coins of five francs, or gold coins from five francs and upward. . . . The subsidiary silver coins (below five francs) were made a legal tender between individuals of the state which coined them to the amount of fifty francs. . . . The treaty was ratified, and went into effect August 1, 1866, to continue until January 1, 1880, or about fifteen years. . . . The downward tendency of silver in 1873 led the Latin Union to fear that the demonetized silver of Germany would flood their own mints if they continued the free coinage of five-franc silver pieces at a legal ratio of 15½:1. . . . This condition of things led to the meeting of delegates from the countries of the Latin Union at Paris, January 30, 1874, who there agreed to a treaty supplementary to that originally formed in 1865, and determined on withdrawing from individuals the full power of free coinage by limiting to a moderate sum the amount of silver five-franc pieces which should be coined by each state of the Union during the year 1874. The date of this suspension of coinage by the Latin Union is regarded by all authorities as of great import in regard to the value of silver."—J. L. Laughlin, *The History of Bimetallicism in the United States*, pp. 146-155.

A. D. 1861-1878.—The Legal-tender notes, or Greenbacks, and the National Bank System, of the American Civil War.—"In January, 1861, the paper currency of the United States was furnished by 1,600 private corporations, organized under thirty-four different State laws. The circulation of the banks amounted to \$202,000,000, of which only about \$50,000,000 were issued in the States which in April, 1861, undertook to set up an independent government. About \$150,000,000 were in circulation in the loyal States, including West Virginia. When Congress met in extraordinary session on the 4th of July, the three-months volunteers, who had hastened to the defence of the capital, were confronting the rebel army on the line of the Potomac, and the first great battle at Bull Run was impending. President Lincoln called upon Congress to provide for the enlistment of 400,000 men, and Secretary Chase submitted estimates for probable expenditures amounting to \$318,000,000. The treasury was empty, and the expenses of the government were rapidly approaching a million dollars a day. The ordinary expenses of the government, during the year ending on the 30th of June, 1861, had been \$62,000,000, and even this sum had not been supplied by the revenue, which amounted to only \$41,000,000. The rest had been borrowed. It was now necessary to provide for an expenditure increased fivefold, and amounting to eight times the income of the country. Secretary Chase ad-

vised that \$80,000,000 be provided by taxation, and \$240,000,000 by loans; and that, in anticipation of revenue, provision be made for the issue of \$50,000,000 of treasury notes, redeemable on demand in coin. 'The greatest care will, however, be requisite,' he said, 'to prevent the degradation of such issues into an irredeemable paper currency, than which no more certainly fatal expedient for impoverishing the masses and discrediting the government of any country can well be devised.' The desired authority was granted by Congress. The Secretary was authorized to borrow, on the credit of the United States, not exceeding \$250,000,000, and, 'as a part of the above loan,' to issue an exchange for coin, or pay for salaries or other dues from the United States, not over \$50,000,000 of treasury notes, bearing no interest, but payable on demand at Philadelphia, New York, or Boston. The act does not say, 'payable in coin,' for nobody had then imagined that any other form of payment was possible. Congress adjourned on the 6th of August, after passing an act to provide an increased revenue from imports, and laying a direct tax of \$20,000,000 upon the States, and a tax of 3 per cent. upon the excess of all private incomes above \$800. The Secretary immediately invited the banks of Philadelphia, New York, and Boston to assist in the negotiation of the proposed loans, and they loyally responded. On the 19th of August they took \$50,000,000 of three years 7-30 bonds at par; on the 1st of October, \$50,000,000 more of the same securities at par; and on the 16th of November, \$50,000,000 of twenty years 6 per cents., at a rate making the interest equivalent to 7 per cent. These advances relieved the temporary necessities of the treasury, and, when Congress reassembled in December, Secretary Chase was prepared to recommend a permanent financial policy. The solid basis of this policy was to be taxation. . . . It was estimated, a revenue of \$90,000,000 would be needed; and to secure that sum, the Secretary advised that the duties on tea, coffee, and sugar be increased; that a direct tax of \$30,000,000 be assessed on the States; that the income tax be modified so as to produce \$10,000,000, and that duties be laid on liquors, tobacco, carriages, legacies, bank-notes, bills payable, and conveyances. For the extraordinary expenses of the war it was necessary to depend upon loans, and the authority to be granted for this purpose the Secretary left 'to the better judgment of Congress,' only suggesting that the rate of interest should be regulated by law, and that the time had come when the government might properly claim a part, at least, of the advantage of the paper circulation, then constituting a loan without interest from the people to the banks. There were two ways, Secretary Chase said, in which this advantage might be secured: 1. By increasing the issue of United States notes, and taxing the bank notes out of existence. 2. By providing a national currency, to be issued by the banks but secured by the pledge of United States bonds. The former plan the Secretary did not recommend, regarding the hazard of a depreciating and finally worthless currency as far outweighing the probable benefits of the measure. . . . Congress had hardly begun to consider these recommendations, when the situation was completely changed by the suspension of specie payments, on the 28th of December, by the banks of New

York, followed by the suspension of the other banks in the country, and compelling the treasury also to suspend. This suspension was the result of a panic occasioned by the shadow of war with England. . . . To provide for the pressing wants of the treasury, Congress, on the 12th of February, 1862, authorized the issue of \$10,000,000 more of demand notes. Before the end of the session further issues were provided for, making the aggregate of United States notes \$300,000,000, besides fractional currency. There was a long debate upon the propriety of making these notes a legal tender for private debts, and it seemed for a time that the measure would be defeated by this dispute. [The bill authorizing the issue of legal tender notes known afterwards as 'Greenbacks' was prepared by the Hon. E. G. Spaulding, who subsequently wrote the history of the measure.] Secretary Chase finally advised the concession of this point; nevertheless, 55 votes in the House of Representatives . . . were recorded against the provision making the notes a tender for private debts. Congress also empowered the Secretary to borrow \$500,000,000 on 5-20 year 6 per cent. bonds, besides a temporary loan of \$100,000,000, and provided that the interest on the bonds should be paid in coin, and that the customs should be collected in coin for that purpose. Nothing was said about the principal, for it was taken for granted that specie payments would be resumed before the payment of the principal of the debt would be undertaken. . . . Congress had thus adopted the plan which the Secretary of the Treasury did not recommend, and neglected the proposition which he preferred. . . . When Congress met in December, 1862, the magnitude of the war had become fully apparent. . . . The enormous demands upon the treasury . . . had exhausted the resources provided by Congress. The disbursements in November amounted to \$59,847,077—two millions a day. Unpaid requisitions had accumulated amounting to \$46,000,000. The total receipts for the year then current, ending June 30, 1863, were estimated at \$511,000,000; the expenditures at \$788,000,000; leaving \$277,000,000 to be provided for. There were only two ways to obtain this sum—by a fresh issue of United States notes, or by new interest-bearing loans. But the gold premium had advanced in October to 34; the notes were already at a discount of 25 per cent. The consequences of an addition of \$277,000,000 to the volume of currency, the Secretary said, would be 'inflation of prices, increase of expenditures, augmentation of debt, and, ultimately, disastrous defeat of the very purposes sought to be obtained by it.' He therefore recommended an increase in the amount authorized to be borrowed on the 5-20 bonds. . . . In order to create a market for the bonds, he again recommended the creation of banking associations under a national law requiring them to secure their circulation by a deposit of government bonds. The suggestion thus renewed was not received with favor by Congress. . . . On the 7th of January Mr. Hooper offered again his bill to provide a national currency, secured by a pledge of United States bonds, but the next day Mr. Stevens, of Pennsylvania, submitted the bill with an adverse report from the committee on ways and means. On the 14th of January Mr. Stevens reported a resolution authorizing the Secretary of the Treas-

ury to issue \$100,000,000 more of United States notes for the immediate payment of the army and navy. The resolution passed the House at once, and the Senate the next day. . . . On the 19th of January President Lincoln sent a special message to the House, announcing that he had signed the joint resolution authorizing a new issue of United States notes, but adding that he considered it his duty to express his sincere regret that it had been found necessary to add such a sum to an already redundant currency, while the suspended banks were still left free to increase their circulation at will. He warned Congress that such a policy must soon produce disastrous consequences, and the warning was effective. On the 25th of January Senator Sherman offered a bill to provide a national currency, differing in some respects from Mr. Hooper's in the House. The bill passed the Senate on the 12th of February, 23 to 21, and the House on the 20th, 78 to 64. . . . It was signed by the President on the 25th of February, 1863.—H. W. Richardson, *The National Banks*, ch. 2.—"One immediate effect of the Legal Tender Act was to destroy our credit abroad. Stocks were sent home for sale, and, as Bagehot shows, Lombard Street was closed to a nation which had adopted legal tender paper money. . . . By August all specie had disappeared from circulation, and postage-stamps and private note-issues took its place. In July a bill was passed for issuing stamps as fractional currency, but in March 1863, another act was passed providing for an issue of 50,000,000 in notes for fractional parts of a dollar—not legal tender. For many years the actual issue was only 30,000,000, the amount of silver fractional coins in circulation in the North, east of the Rocky Mountains, when the war broke out. . . . Gold rose to 200-220 or above, making the paper worth 45 or 50 cts., at which point the 5 per cent. ten-forties floated. The amount sold up to October 31st, 1865, was \$172,770,100. Mr. Spaulding reckons up the paper issues which acted more or less as currency, on January 30th, 1864, at \$1,125,877,034; 812,000,000 bore no interest."—W. G. Sumner, *Hist. of Am. Currency*, pp. 204-208.—The paper-money issues of the Civil War were not brought to parity of value with gold until near the close of the year 1878. The 1st day of January, 1879, had been fixed for resumption by an act passed in 1875; but that date was generally anticipated in practical business by a few months.—A. S. Bolles, *Financial History of the U. S.*, 1861-1885, bk. 1, ch. 4, 5, 8, and 11, and bk. 2, ch. 2.

A. D. 1871-1873.—Adoption of the Gold Standard by Germany.—"At the close of the Franco-Prussian war the new German Empire found the opportunity . . . for the establishment of a uniform coinage throughout its numerous small states, and was essentially aided in its plan at this time by the receipt of the enormous war-indemnity from France, of which \$54,600,000 was paid to Germany in French gold coin. Besides this, Germany received from France bills of exchange in payment of the indemnity which gave Germany the title to gold in places, such as London, on which the bills were drawn. Gold in this way left London for Berlin. With a large stock of gold on hand, Germany began a series of measures to change her circulation from silver to gold. Her circulation in 1870, before the change was made, was

composed substantially of silver and paper money, with no more than 4 per cent of the whole circulation in gold. . . . The substitution of gold instead of silver in a country like Germany which had a single silver medium was carried out by a path which led first to temporary bimetalism and later to gold monometallism. And for this purpose the preparatory measures were passed December 4, 1871. . . . This law of 1871 created new gold coins, current equally with existing silver coins, at rates of exchange which were based on a ratio between the gold and silver coins of 1:15½. The silver coins were not demonetized by this law; their coinage was for the present only discontinued; but there was no doubt as to the intention of the Government in the future. . . . The next and decisive step

toward a single gold standard was taken by the act of July 9, 1873. . . . By this measure gold was established as the monetary standard of the country, with the 'mark' as the unit, and silver was used, as in the United States in 1853, in a subsidiary service. . . . Under the terms of this legislation Germany began to withdraw her old silver coinage, and to sell as bullion whatever silver was not recoined into the new subsidiary currency."—J. L. Laughlin, *Hist. of Bimetallism in the U. S.*, pp. 136-140.

A. D. 1893.—Stoppage of the free Coinage of Silver in India.—The free coinage of silver in India was stopped by the Government in June, 1893, thus taking the first step toward the establishment of the gold standard in that country.

MONGOLS: Origin and earliest history.—"The name Mongol (according to Schmlidt) is derived from the word Mong, meaning brave, daring, bold, an etymology which is acquiesced in by Dr. Schott. Ssanang Setzen says it was first given to the race in the time of Jingis Khan, but it is of much older date than his time, as we know from the Chinese accounts. . . . They point further, as the statements of Raschid do, to the Mongols having at first been merely one tribe of a great confederacy, whose name was probably extended to the whole when the prowess of the Imperial House which governed it gained the supremacy. We learn lastly from them that the generic name by which the race was known in early times to the Chinese was Shi wei, the Mongols having, in fact, been a tribe of the Shi wei. . . . The Shi wei were known to the Chinese from the 7th century; they then consisted of various detached hordes, subject to the Thu kin, or Turks. . . . After the fall of the Yuan-Yuan, the Turks, by whom they were overthrown, acquired the supreme control of Eastern Asia. They had, under the name of Hiong nu, been masters of the Mongolian desert and its border land from a very early period, and under their new name of Turks they merely reconquered a position from which they had been driven some centuries before. Everywhere in Mongol history we find evidence of their presence, the titles Khakan, Khan, Bigui or Beg, Terkhan, &c., are common to both races, while the same names occur among Mongol and Turkish chiefs. . . . This fact of the former predominance of Turkish influence in further Asia supports the traditions collected by Raschid, Abulghazi, &c., . . . which trace the race of Mongol Khans up to the old royal race of the Turks."—H. H. Howorth, *Hist. of the Mongols*, v. 1, pp. 27-32.—"Here [in the eastern portion of Asia known as the desert of Gobi], from time immemorial, the Mongols, a people nearly akin to the Turks in language and physiognomy, had made their home, leading a miserable nomadic life in the midst of a wild and barren country, unrecognised by their neighbours, and their very name unknown centuries after their kinsmen, the Turks, had been exercising an all-powerful influence over the destinies of Western Asia."—A. Vámbéry, *Hist. of Bokhara*, ch. 8.—See TARTARS, and CHINA.

A. D. 1153-1227.—Conquests of Jingiz Khan.—"Jingiz-Khan [or Genghis, or Zingis], whose original name was Tamujin, the son of a Tatar chief, was born in the year 1153 A. D. In

1202, at the age of 49, he had defeated or propitiated all his enemies, and in 1205 was proclaimed, by a great assembly, Khakan or Emperor of Tartary. His capital, a vast assemblage of tents, was at Kara-Korum, in a distant part of Chinese Tartary; and from thence he sent forth mighty armies to conquer the world. This extraordinary man, who could neither read nor write, established laws for the regulation of social life and for the chase; and adopted a religion of pure Theism. His army was divided into Tumans of 10,000 men, Hazarehs of 1,000, Sedehs of 100, and Debehs of 10, each under a Tatar officer, and they were armed with bows and arrows, swords, and iron maces. Having brought the whole of Tartary under his sway, he conquered China, while his sons, Oktai and Jagatal, were sent [A. D. 1218] with a vast army against Khuwarizm [whose prince had provoked the attack by murdering a large number of merchants who were under the protection of Jingiz]. The country was conquered, though bravely defended by the king's son, Jalalu-'d-Din; 100,000 people were put to the sword, the rest sold as slaves. . . . The sons of Jingiz-Khan then returned in triumph to their father; but the brave young prince, Jalalu-'d-Din, still held out against the conquerors of his country. This opposition roused Jingiz-Khan to fury; Balk was attacked for having harboured the fugitive prince in 1221, and, having surrendered, the people were all put to death. Nishapur shared the same fate, and a horrible massacre of all the inhabitants took place." Jalalu-'d-Din, pursued to the banks of the Indus and defeated in a desperate battle fought there, swam the river on horseback, in the face of the enemy, and escaped into India. "The Mongol hordes then overran Kandahar and Multan, Azerbaijan and Irak; Fars was only saved by the submission of its Ata-beg, and two Mongol generals marched round the Caspian Sea. Jingiz-Khan returned to Tartary in A. D. 1222, but in these terrible campaigns he lost no less than 200,000 men. As soon as the great conqueror had retired out of Persia, the indefatigable Jalalu-'d-Din recrossed the Indus with 4,000 followers, and passing through Shiraz and Isfaham drove the Mongols out of Tabriz. But he was defeated by them in 1226; and though he kept up the war in Azerbaijan for a short time longer, he was at length utterly routed, and flying into Kurdistan was killed in the house of a friend there, four years afterwards. . . . Jingiz-Khan died in the year 1227."—C. R. Markham, *Hist. of Persia*, ch. 7.—In 1224 Jingiz

"divided his gigantic empire amongst his sons as follows: China and Mongolia were given to Oktai, whom he nominated as his successor; Tchaghatai received a part of the Uigurie passes as far as Khahrezm, including Turkestan and Transoxania; Djudi had died in the meantime, so Batu was made lord of Kharezm, Desht i-Kiptchak of the pass of Derbend and Tuli was placed over Khorasan, Persia, and India."—A. Vámbéry, *Hist. of Bokhara*, ch. 8.—"Popularly he [Jingis-Khan] is mentioned with Attila and with Timur as one of the 'Scourges of God.' . . . But he was far more than a conquerer. . . . In every detail of social and political economy he was a creator; his laws and his administrative rules are equally admirable and astounding to the student. . . . He may fairly claim to have conquered the greatest area of the world's surface that was ever subdued by one hand. . . . Jingis organised a system of intelligence and espionage by which he generally knew well the internal condition of the country he was about to attack. He intrigued with the discontented and seduced them by fair promises. . . . The Mongols ravaged and laid waste the country all round the bigger towns, and they generally tried to entice a portion of the garrison into an ambuscade. They built regular siege-works armed with catapults; the captives and peasants were forced to take part in the assault; the attack never ceased night or day; relief of troops keeping the garrison in perpetual terror. They employed Chinese and Persians to make their war engines. . . . They rarely abandoned the siege of a place altogether, and would sometimes continue a blockade for years. They were bound by no oath, and however solemn their promise to the inhabitants who would surrender, it was broken, and a general massacre ensued. It was their policy to leave behind them no body of people, however submissive, who might inconvenience their communications. . . . His [Jingis'] creed was to sweep away all cities, as the haunts of slaves and of luxury; that his herds might freely feed upon grass whose green was free from dusty feet. It does make one hide one's face in terror to read that from 1211 to 1223, 18,470,000 human beings perished in China and Tangut alone, at the hands of Jingis and his followers."—H. H. Howorth, *Hist. of the Mongols*, v. 1, p. 49, 108–113.—"He [Jingis-Khan] was . . . a military genius of the very first order, and it may be questioned whether either Cæsar or Napoleon can, as commanders, be placed on a par with him. The manner in which he moved large bodies of men over vast distances without an apparent effort, the judgment he showed in the conduct of several wars in countries far apart from each other, his strategy in unknown regions, always on the alert yet never allowing hesitation or over-caution to interfere with his enterprises, the sieges which he brought to a successful termination, his brilliant victories . . . —all combined, make up the picture of a career to which Europe can offer nothing that will surpass, if indeed she has anything to bear comparison with it."—D. C. Boulger, *Hist. of China*, v. 1, ch. 21.—See, also, CHINA: A. D. 1205–1234; KHORASSAN; BOKHARA: A. D. 1219; SAMARKAND; MERV; BALKH; KHUAREZM.

A. D. 1202.—Overthrow of the Keraït, or the kingdom of Prester John. See PRESTER JOHN, THE KINGDOM OF.

A. D. 1229–1294.—Conquests of the successors of Jingiz Khan.—"Okkodai [or Ogotal or Oktai], the son and successor of Chinghiz, followed up the subjugation of China, extinguished the Kin finally in 1234 and consolidated with his empire all the provinces north of the Great Kiang. . . . After establishing his power over so much of China as we have said, Okkodai raised a vast army and set it in motion towards the west. One portion was directed against Armenia, Georgia, and Asia Minor, whilst another great host under Batu, the nephew of the Great Khan, conquered the countries north of Caucasus, overran Russia making it tributary, and still continued to carry fire and slaughter westward. One great detachment under a lieutenant of Batu's entered Poland, burned Cracow, found Breslaw in ashes and abandoned by its people, and defeated with great slaughter at Wahlstadt near Lignitz (April 12th, 1241) the troops of Poland, Moravia and Silesia, who had gathered under Duke Henry of the latter province to make head against this astounding flood of heathen. Batu himself with the main body of his army was ravaging Hungary [see HUNGARY: A. D. 1114–1301]. . . . Pesth was now taken and burnt and all its people put to the sword. The rumours of the Tartars and their frightful devastations had scattered fear through Europe, which the defeat at Lignitz raised to a climax. Indeed weak and disunited Christendom seemed to lie at the foot of the barbarians. The Pope to be sure proclaimed crusade, and wrote circular letters, but the enmity between him and the Emperor Frederic II. was allowed to prevent any co-operation, and neither of them responded by anything better than words to the earnest calls for help which came from the King of Hungary. No human aid merited thanks when Europe was relieved by hearing that the Tartar host had suddenly retreated eastward. The Great Khan Okkodai was dead [A. D. 1241] in the depths of Asia, and a courier had come to recall the army from Europe. In 1255 a new wave of conquest rolled westward from Mongolia, this time directed against the Ismaelians or 'Assassins' on the south of the Caspian, and then successively against the Khalif of Baghdad and Syria. The conclusion of this expedition under Hulagu may be considered to mark the climax of the Mongol power. Mangu Khan, the emperor then reigning, and who died on a campaign in China in 1259, was the last who exercised a sovereignty so nearly universal. His successor Kublai extended indeed largely the frontiers of the Mongol power in China [see CHINA: A. D. 1259–1294], which he brought entirely under the yoke, besides gaining conquests rather nominal than real on its southern and south-eastern borders, but he ruled effectively only in the eastern regions of the great empire, which had now broken up into four. (1) The immediate Empire of the Great Khan, seated eventually at Khanbalik or Peking, embraced China, Corea, Mongolia, and Manchuria, Tibet, and claims at least over Tunking and countries on the Ava frontier; (2), the Chagatai Khanate, or Middle Empire of the Tartars, with its capital at Almaliq, included the modern Dsungaria, part of Chinese Turkestan, Transoxiana, and Afghanistan; (3), the Empire of Kipehak, or the Northern Tartars, founded on the conquests of Batu, and with its chief seat at Sarai, on the Wolga, covered a

large part of Russia, the country north of Caucasus, Khwarizm, and a part of the modern Siberia; (4), Persia, with its capital eventually at Tabriz, embraced Georgia, Armenia, Azerbaijan and part of Asia Minor, all Persia, Arabian Irak, and Khorasan."—H. Yule, *Cathay and the way Thither: Preliminary Essay*, sect. 92–94 (v. 1).

Also in: H. H. Howorth, *Hist. of the Mongols*, ch. 4–5.

A. D. 1238–1391.—The Kipchak empire.—The Golden Horde.—"It was under Touthi [or Juchi], son of Tschingis, that the great migration of the Moguls effected an abiding settlement in Russia. . . . Touthi, with half a million of Moguls, entered Europe close by the Sea of Azof. On the banks of the river Kalca he encountered the united forces of the Russian princes. The death of Touthi for awhile arrested the progress of the Tatar arms. But in 1236, Batu, the son of Touthi, took the command, and all the principalities and cities of Russia, with the exception of Novogorod, were desolated by fire and sword and occupied by the enemy. For two centuries Russia was held cabined, cribbed, confined by this encampment or horde. The Golden Horde of the Deshti Kipzak, or Steppe of the Hollow Tree. Between the Volga and the Don, and beyond the Volga, spreads this limitless region the Deshti Kipzak. It was occupied in the first instance, most probably, by Hun-Turks, who first attracted and then were absorbed by fresh immigrants. From this region an empire took its name. By the river Akhtuba, a branch of the lower Volga, at Great Serai, Batu erected his golden tent; and here it was he received the Russian princes whom he had reduced to vassalage. Here he entertained a king of Armenia; and here, too, he received the ambassadors of St. Louis. . . . With the exception of Novogorod, which had joined the Hanseatic League in 1276, and rose rapidly in commercial prosperity, all Russia continued to endure, till the extinction of the house of Batu, a degrading and hopeless bondage. When the direct race came to an end, the collateral branches became involved in very serious conflicts; and in 1380, Temnik-Mami was overthrown near the river Don by Demetrius IV., who, with the victory, won a title of honour, Donski, which outlasted the benefits of the victory; although it is from this conflict that Russian writers date the commencement of their freedom. . . . After an existence of more than 250 years the Golden Horde was finally dissolved in 1480. Already, in 1468, the khanate of Kusan [or Kazan] was conquered and absorbed by the Grand Duke Ivan; and, after the extinction of the horde, Europeans for the first time exacted tribute of the Tatar, and ambassadors found their way unobstructed to Moscow. But the breaking up of the Golden Horde did not carry with it the collapse of all Tatar power in Russia. Rather the effect was to create a concentration of all their residuary resources in the Crimea."—C. I. Black, *The Proselytes of Ishmael*, pt. 3, ch. 4.—"The Mongol word yurt meant originally the domestic fireplace, and, according to Von Hammer, the word is identical with the German herde and the English hearth, and thence came in a secondary sense to mean house or home, the chief's house being known as Ulugh Yurt or the Great House. An assemblage of several yurts formed an ordu ororda, equivalent to the German hort and the

English horde, which really means a camp. The chief camp where the ruler of the nation lived was called the Sir Orda, i. e., the Golden Horde. . . . It came about that eventually the whole nation was known as the Golden Horde." The power of the Golden Horde was broken by the conquests of Timour (A. D. 1389–1391). It was finally broken into several fragments, the chief of which, the Khanates of Kazan, of Astrakhan, and of Krim, or the Crimea, maintained a long struggle with Russia, and were successively overpowered and absorbed in the empire of the Muscovite.—H. H. Howorth, *Hist. of the Mongols*, pt. 2, pp. 1 and x.—See, also, above: A. D. 1229–1294; KIPCHAKS; and RUSSIA: A. D. 1237–1480.

MONOTHELITE CONTROVERSY, The.—"The Council of Chalcedon having decided that our Lord possessed two natures, united but not confused, the Eutychian error condemned by it is supposed to have been virtually reproduced by the Monothelites, who maintained that the two natures were so united as to have but one will. This heresy is ascribed to Heraclius the Greek emperor, who adopted it as a political project for reconciling and reclaiming the Monophysites to the Church, and thus to the empire. The Armenians as a body had held, for a long time, the Monophysite (a form of the Eutychian) heresy, and were then in danger of breaking their allegiance to the emperor, as they had done to the Church; and it was chiefly to prevent the threatened rupture that Heraclius made a secret compromise with some of their principal men. . . . Neither . . . the strenuous efforts of the Greek emperors Heraclius and Constantine, nor the concession of Honorius the Roman pontiff to the soundness of the Monothelite doctrine, could introduce it into the Church. Heraclius published in A. D. 639 an Ecthesis, or a formula, in which Monothelism was covertly introduced. The sixth general council, held in Constantinople A. D. 680, condemned both the heresy and Honorius, the Roman pontiff who had countenanced it. 'The doctrine of the

Monothelites, thus condemned and exploded by the Council of Constantinople, found a place of refuge among the Mardaites, a people who inhabited the mountains of Libanus and Anti-Libanus, and who, about the conclusion of this century, received the name of Maronites from John Maro, their first bishop—a name which they still retain. . . . In the time of the Crusaders, the Maronites united with them in their wars against the Saracens, and subsequently (A. D. 1182) in their faith. After the evacuation of Syria by the Crusaders, the Maronites, as their former allies, had to bear the vengeance of the Saracenic kings; and for a long time they defended themselves as they could, sometimes inflicting serious injury on the Moslem army, and at others suffering the revengeful fury of their enemies. They ultimately submitted to the rule of their Mohammedan masters, and are now good subjects of the sultan. . . . The Maronites now . . . are entirely free from the Monothelite heresy, which they doubtless followed in their earlier history; nor, indeed, does there appear a single vestige of it in their histories, theological books, or liturgies. Their faith in the person of Christ and in all the articles of religion is now, as it has been for a long time past, in exact uniformity with the doctrines of the Roman Church.”—J. Wortabet, *Researches into the Religions of Syria*, pp. 103-111, with foot-note.

A. D. 1492-1609.—Persecution and final expulsion from Spain.—The deadly effect upon that country. —“After the reduction . . . of the last Mohammedan kingdom in Spain, the great object of the Spaniards became to convert those whom they had conquered [in violation of the treaty made on the surrender of Granada]. . . . By torturing some, by burning others, and by threatening all, they at length succeeded; and we are assured that, after the year 1526, there was no Mohammedan in Spain, who had not been converted to Christianity. Immense numbers of them were baptized by force; but being baptized, it was held that they belonged to the Church, and were amenable to her discipline. That discipline was administered by the Inquisition, which, during the rest of the 16th century, subjected these new Christians, or Moriscos, as they were now called, to the most barbarous treatment. The genuineness of their forced conversions was doubted; it therefore became the business of the Church to inquire into their sincerity. The civil government lent its aid; and among other enactments, an edict was issued by Philip II., in 1566, ordering the Moriscos to abandon everything which by the slightest possibility could remind them of their former religion. They were commanded, under severe penalties, to learn Spanish, and to give up all their Arabic books. They were forbidden to read their native language, or to write it, or even to speak it in their own houses. Their ceremonies and their very games were strictly prohibited. They were to indulge in no amusements which had been practised by their fathers; neither were they to wear such clothes as they had been accustomed to. Their women were to go unveiled; and, as bathing was a heathenish custom, all public baths were to be destroyed, and even all baths in private houses. By these and similar measures, these unhappy people were at length goaded into rebellion; and in 1568 they took the desperate step of measuring their force against that of the whole Spanish monarchy. The result could hardly be doubted; but the Moriscos maddened by their sufferings, and fighting for their all, protracted the contest till 1571, when the insurrection was finally put down. By this unsuccessful effort they were greatly reduced in numbers and in strength; and during the remaining 27 years of the reign of Philip II. we hear comparatively little of them. Notwithstanding an occasional outbreak, the old animosities were subsiding, and in the course of time would probably have disappeared. At all events, there was no pretence for violence on the part of the Spaniards, since it was absurd to suppose that the Moriscos, weakened in every way, humbled, broken, and scattered through the kingdom, could, even if they desired it, effect anything against the resources of the executive government. But, after the death of Philip II., that movement began . . . which, contrary to

the course of affairs in other nations, secured to the Spanish clergy in the 17th century, more power than they had possessed in the 16th. The consequences of this were immediately apparent. The clergy did not think that the steps taken by Philip II. against the Moriscoes were sufficiently decisive. . . . Under his successor, the clergy . . . gained fresh strength, and they soon felt themselves sufficiently powerful to begin another and final crusade against the miserable remains of the Moorish nation. The Archbishop of Valencia was the first to take the field. In 1602, this eminent prelate presented a memorial to Philip III. against the Moriscoes; and finding that his views were cordially supported by the clergy, and not discouraged by the crown, he followed up the blow by another memorial having the same object. . . . He declared that the Armada, which Philip II. sent against England in 1588, had been destroyed, because God would not allow even that pious enterprise to succeed, while those who undertook it, left heretics undisturbed at home. For the same reason, the late expedition to Algiers had failed; it being evidently the will of Heaven that nothing should prosper while Spain was inhabited by apostates. He, therefore, exhorted the king to exile all the Moriscoes, except some whom he might condemn to work in the galleys, and others who could become slaves, and labour in the mines of America. This, he added, would make the reign of Philip glorious to all posterity, and would raise his fame far above that of his predecessors, who in this matter had neglected their obvious duty. . . . That they should all be slain, instead of being banished, was the desire of a powerful party in the Church, who thought that such signal punishment would work good by striking terror into the heretics of every nation. Bleda, the celebrated Dominican, one of the most influential men of his time, wished this to be done, and to be done thoroughly. He said, that, for the sake of example, every Morisco in Spain should have his throat cut, because it was impossible to tell which of them were Christians at heart, and it was enough to leave the matter to God, who knew his own, and who would reward in the next world those who were really Catholics. . . . The religious scruples of Philip III. forbade him to struggle with the Church; and his minister Lerma would not risk his own authority by even the show of opposition. In 1609 he announced to the king, that the expulsion of the Moriscoes had become necessary. 'The resolution,' replied Philip, 'is a great one; let it be executed.' And executed it was, with unflinching barbarity. About 1,000,000 of the most industrious inhabitants of Spain were hunted out like wild beasts, because the sincerity of their religious opinions was doubtful. Many were slain, as they approached the coast; others were beaten and plundered; and the majority, in the most wretched plight, sailed for Africa. During the passage, the crew, in many of the ships, rose upon them, butchered the men, ravished the women, and threw the children into the sea. Those who escaped this fate, landed on the coast of Barbary, where they were attacked by the Bedouins, and many of them put to the sword. Others made their way into the desert, and perished from famine. Of the number of lives actually sacrificed, we have no authentic account; but it is said, on very good authority,

that in one expedition, in which 140,000 were carried to Africa, upwards of 100,000 suffered death in its most frightful forms within a few months after their expulsion from Spain. Now, for the first time, the Church was really triumphant. For the first time there was not a heretic to be seen between the Pyrenees and the Straits of Gibraltar. All were orthodox, and all were loyal. Every inhabitant of that great country obeyed the Church, and feared the king. And from this happy combination, it was believed that the prosperity and grandeur of Spain were sure to follow. . . . The effects upon the material prosperity of Spain may be stated in a few words. From nearly every part of the country, large bodies of industrious agriculturists and expert artificers were suddenly withdrawn. The best systems of husbandry then known, were practised by the Moriscoes, who tilled and irrigated with indefatigable labour. The cultivation of rice, cotton, and sugar, and the manufacture of silk and paper were almost confined to them. By their expulsion all this was destroyed at a blow, and most of it was destroyed for ever. For the Spanish Christians considered such pursuits beneath their dignity. In their judgment, war and religion were the only two avocations worthy of being followed. To fight for the king, or to enter the Church was honourable; but everything else was mean and sordid. When, therefore, the Moriscoes were thrust out of Spain, there was no one to fill their place; arts and manufactures either degenerated, or were entirely lost, and immense regions of arable land were left uncultivated. . . . Whole districts were suddenly deserted, and down to the present day have never been repeopled. These solitudes gave refuge to smugglers and brigands, who succeeded the industrious inhabitants formerly occupying them; and it is said that from the expulsion of the Moriscoes is to be dated the existence of those organized bands of robbers, which, after this period, became the scourge of Spain, and which no subsequent government has been able entirely to extirpate. To these disastrous consequences, others were added, of a different, and, if possible, of a still more serious kind. The victory gained by the Church increased both her power and her reputation. . . . The greatest men, with hardly an exception, became ecclesiastics, and all temporal considerations, all views of earthly policy, were despised and set at naught. No one inquired; no one doubted; no one presumed to ask if all this was right. The minds of men succumbed and were prostrate. While every other country was advancing, Spain alone was receding. Every other country was making some addition to knowledge, creating some art, or enlarging some science, Spain numbed into a death-like torpor, spellbound and entranced by the accursed superstition which preyed on her strength, presented to Europe a solitary instance of constant decay."—H. T. Buckle, *Hist. of Civilization*, v. 2, ch. 8.

MORAVIA: Its people and their early history. See BOHEMIA: ITS PEOPLE, &c.

9th Century.—Conversion to Christianity.—The kingdom of Svatopluk and its obscure destruction.—“Moravia has not even a legendary history. Her name appears for the first time at the beginning of the 9th century, under its Slav form, Morava (German ‘March,’ ‘Moehren’). It is used to denote at the same time a tributary of the Danube and the country it waters; it is met with again in the lower valley of that stream, in Servia, and appears to have a Slav origin. During the 7th and 8th centuries there is no doubt Moravia was divided among several princes, and had a hard struggle against the Avars. The first prince whose name is known was Mořmir, who ruled at the beginning of the 9th century. . . . During his reign Christianity made some progress in Moravia. . . . Mořmir tried to withstand the Germans, but was not successful; and in 846 Louis the German invaded his country, deposed him, and made his nephew Rostislav, whom the chroniclers call Rastiz, ruler in his stead. . . . The new prince, Rostislav, determined to secure both the political and moral freedom of his country. He fortified his frontiers and then declared war against the emperor. He was victorious, and when once peace was secured he undertook a systematic conversion of his people. Thus came about one of the great episodes in the history of the Slavs, and their Church, the mission of the apostles Cyril and Methodius. . . . After having struggled successfully for some time against the Germans” Rostislav was “betrayed by his nephew and vassal, Svatopluk, into the hands of Karloman, duke of Carinthia and son of Louis the German, who put out his eyes and shut him up in a monastery. Svatopluk believed himself sure of the succession to his uncle as the price of his treachery, but a very different reward fell to his lot, as Karloman, trusting but little in his fidelity to the Germans, threw him also into captivity. The German yoke was, however, hateful to the Moravians; they soon rebelled, and Karloman hoped to avert the danger by releasing Svatopluk and placing him at the head of an army. Svatopluk marched against the Moravians, then suddenly joined his forces to theirs and attacked the Germans. This time the independence of Moravia was secured, and was recognized by the treaty of Forcheim (874). . . . Thenceforward peace reigned between Svatopluk and Louis the German. . . . At one time he [Svatopluk] was the most powerful monarch of the Slavs; Rome was in treaty with him, Bohemia gravitated towards the orbit of Moravia, while Moravia held the empire in check. . . . At this time [891] the kingdom of Svatopluk . . . included, besides Moravia and the present Austrian Silesia, the subject country of Bohemia, the Slav tribes on the Elbe and the Vistula as far

as the neighbourhood of Magdeburg, part of Western Galicia, the country of the Slovaks, and Lower Pannonia.” But Svatopluk was ruined by war with his neighbor, Arnulf, duke of Pannonia. The latter “entered into an alliance with Baelav, a Slovene prince, sought the aid of the king of the Bulgarians, and, what was of far graver importance, summoned to his help the Magyars, who had just settled themselves on the Lower Danube. Swabians, Bavarians, Franks, Magyars, and Slovenes rushed simultaneously upon Moravia. Overwhelmed by numbers, Svatopluk made no attempt at resistance; he shut up his troops in fortresses, and abandoned the open country to the enemy, who ravaged it for four whole weeks. Then hostilities ceased; but no durable peace could exist between the two adversaries. War began again in the following year, when death freed Arnulf from Svatopluk. . . . At his death he left three sons; he chose the eldest, Mořmir II., as his heir, and assigned appanages to each of the others. On his death-bed he begged them to live at peace with one another, but his advice was not followed. . . . Bohemia soon threw off those bonds which had attached her as a vassal to Svatopluk; the Magyars invaded Moravian Pannonia, and forced Mořmir into an alliance with them. . . . In the year 900 the Bavarians, together with the Chekhs, invaded Moravia. In 903 the name of Mořmir disappears. As to the cause of his death, as to how it was that suddenly and for ever the kingdom of Moravia was destroyed, the chronicles tell us nothing. Cosmas of Prague shows us Moravia at the mercy of Germans, Chekhs, and Hungarians; then history is silent, towns and castles crumble to pieces, churches are overthrown, the people are scattered.”—L. Leger, *Hist. of Austro-Hungary*, ch. 4.

MORAVIAN OR BOHEMIAN BRETHREN (Unitas Fratrum): Origin and early history. See BOHEMIA: A. D. 1434-1457; and 1621-1648.

In Saxony and in America.—The Indian Missions.—“In 1722, and in the seven following years, a considerable number of these ‘Brethren,’ led by Christian David, who were persecuted in their homes, were received by Count Zinzendorf on his estate at Berthelsdorf in Saxony. They founded a village called Herrnhut, or ‘the Watch of the Lord.’ There they were joined by Christians from other places in Germany, and, after some time, Zinzendorf took up his abode among them, and became their principal guide and pastor. . . . In 1737, he consecrated himself wholly to the service of God in connection with the Moravian settlement, and was ordained a bishop. . . . Zinzendorf had before been received into the Lutheran ministry. The peculiar fervor which characterized his religious work, and certain particulars in his teaching, caused the Saxon Government, which was wedded to the traditional ways of Lutheranism, to exclude him from Saxony for about ten years (1736-1747). He prosecuted his religious labors in Frankfort, journeyed through Holland and England, made a voyage to the West Indies, and, in 1741, another voyage to America. New

branches of the Moravian body he planted in the countries which he visited. . . . It was a church within a church that Zinzendorf aimed to establish. It was far from his purpose to found a sect antagonistic to the national churches in the midst of which the Moravian societies arose. . . . With a religious life remarkable as combining warm emotion with a quiet and serene type of feeling, the community of Zinzendorf connected a missionary zeal not equalled at that time in any other Protestant communion. Although few in number, they sent their gospel messengers to all quarters of the globe."—G. P. Fisher, *Hist. of the Christian Church*, pp. 506–507. —The first settlement of the Moravians in America was planted in Georgia, in 1735. "But Oglethorpe's border war with the Spaniards compelled him to call every man in his colony to arms, and the Moravians, rather than forsake their principles [of non-resistance, and dependence upon prayer], abandoned their lands and escaped to Pennsylvania [1740]. Here some of their brethren were already fixed. Among the refugees was the young David Zeisberger, the future head of the Ohio missions. Bethlehem on the Lehigh became, and is yet, the centre in America of their double system of missions and education. They bought lands, laid out villages and farms, built houses, shops, and mills, but everywhere, and first of all, houses of prayer, in thankfulness for the peace and prosperity at length found. The first mission established by Zinzendorf in the colonies was in 1741, among the Mohican Indians, near the borders of New York and Connecticut. The bigoted people and authorities of the neighborhood by outrages and persecution drove them off, so that they were forced to take refuge on the Lehigh. The brethren established them in a new colony twenty miles above Bethlehem, to which they gave the name of Gnadenhütten (Tents of Grace). The prosperity of the Mohicans attracted the attention and visits of the Indians beyond. The nearest were the Delawares, between whom and the Mohicans there were strong ties of affinity, as branches of the old Lenni Lenape stock. Relations were thus formed between the Moravians and the Delawares. And by the fraternization between the Delawares and Shawanees . . . and their gradual emigration to the West to escape the encroachments of Penn's people, it occurred that the Moravian missionaries, Zeisberger foremost, accompanied their Delaware and Mohican converts to the Susquehanna in 1765, and again, when driven from there by the cession at Fort Stanwix, journeyed with them across the Alleghenies to Goshgoshink, a town established by the unconverted Delawares far up the Alleghany River." In 1770, having gained some important converts among the Delawares of the Wolf clan, at Kuskuskee, on Big Beaver Creek, they transferred themselves to that place, naming it Friedenstadt. But there they were opposed with such hostility by warriors and white traders that they determined "to plunge a step further into the wilderness, and go to the head chief of the Delawares at Gepelmukpechenk (Stillwater, or Tuscaraw) on the Muskingum. It was near this village that Christian Frederick Post, the brave, enterprising pioneer of the Moravians, had established himself in 1761, with the approbation of the chiefs. . . . By marriage with an Indian wife he had for-

felted his regular standing with the congregation. His intimate acquaintance with the Indians, and their languages and customs, so far gained upon them that in 1762 he was permitted to take Heckewelder to share his cabin and establish a school for the Indian children. But in the autumn the threatened outburst of Pontiac's war had compelled them to flee." Early in 1772 the Moravian colony "was invited by the council at Tuscaraw, the Wyandots west of them approving it, to come with all their Indian brethren from the Alleghany and Susquehanna, and settle on the Muskingum (as the Tuscarawas was then called), and upon any lands that they might choose." The invitation was accepted. "The pioneer party, in the removal from the Beaver to Ohio, consisted of Zeisberger and five Indian families, 28 persons, who arrived at this beautiful ground May 3, 1772. . . . The site was at the large spring, and appropriately it was named for it Shoenbrun. In August arrived the Missionaries Ettwein and Heckewelder, with the main body of Christian Indians who had been invited from the Alleghany and the Susquehanna, about 250 in number. . . . This, and further accessions from the east in September, made it advisable to divide the colony into two villages. The second [named Gnadenhütten] was established ten miles below Shoenbrun. . . . In April, 1773, the remnants of the mission on the Beaver joined their brethren in Ohio. The whole body of the Moravian Indians . . . was now united and at rest under the shelter of the unconverted but . . . tolerant Delaware warriors. . . . The population of the Moravian villages at the close of 1775 was 414 persons. . . . The calamity of the Moravians was the war of the American Revolution. It developed the dangerous fact that their villages . . . were close upon the direct line between Pittsburgh and Detroit, the outposts of the two contending forces." The peaceful settlement became an object of hostility to the meaner spirits on both sides. In September, 1781, by order of the British commander at Detroit, they were expelled from their settlement, robbed of all their possessions, and sent to Sandusky. In the following February, a half-starved party of them, numbering 96, who had ventured back to their ravaged homes, for the purpose of gleaning the corn left standing in the fields, were massacred by a brutal American force, from the Ohio. "So perished the Moravian missions on the Muskingum. Not that the pious founders ceased their labors, or that these consecrated scenes knew them no more. But their Indian communities, the germ of their work, the sign of what was to be accomplished by them in the great Indian problem, were scattered and gone. Zeisberger, at their head, labored with the remnants of their congregation for years in Canada. They then transferred themselves temporarily to settlements on the Sandusky, the Huron, and the Cuyahoga rivers. At last he and Heckewelder, with the survivors of these wanderings, went back to their lands on the Tuscarawas."—R. King, *Ohio*, ch. 6.

MORE, SIR THOMAS, Execution of. See ENGLAND: A. D. 1529–1535.

MOREA.

MOREA: Origin of the name.—“The Morea must . . . have come into general use, as the name of the peninsula [of the Peloponnesus] among the Greeks, after the Latin conquest [of 1204-1205], even allowing that the term was used among foreigners before the arrival of the Franks. . . . The name Morea was, however, at first applied only to the western coast of the Peloponnesus, or perhaps more particularly to Elis, which the epitome of Strabo points out as a district exclusively Slavonian, and which, to this day, preserves a number of Slavonian names. . . . Originally the word appears to be the same geographical denomination which the Slavonians of the north had given to a mountain district of Thrace in the chain of Mount Rhodope. In the 14th century the name of this province is written by the Emperor Cantacuzenos, who must have been well acquainted with it personally, *Morria*. Even as late as the 14th century, the Morea is mentioned in official documents relating to the Frank principality as a province of the Peloponnesus, though the name was then commonly applied to the whole peninsula.”—G. Finlay, *Hist. of Greece from its Conquest by the Crusaders*, ch. 1, sect. 4.

MORGANATIC MARRIAGES.—“Besides the dowry which was given before the marriage ceremony had been performed, it was customary [among some of the ancient German peoples] for the husband to make his wife a present on the morning after the first night. This was called the ‘morgengabe,’ or morning gift, the presenting of which, where no previous ceremony had been observed, constituted a particular kind of connexion called *matrimonium morganaticum*, or ‘morganatic marriage.’ As the liberality of the husband was apt to be excessive, we find the amount limited by the Langobardian laws to one fourth of the bridegroom’s substance.”—W. MORMONISM: A. D. 1805-1830.—Joseph Smith and the Book of Mormon.—“Joseph Smith, Jr., who . . . appears in the character of the first Mormon prophet, and the putative founder of Mormonism and the Church of Latter Day Saints, was born in Sharon, Windsor County, Vt., December 13, 1805. He was the son of Joseph Smith, Sr., who, with his wife Lucy and their family, removed from Royalton, Vt., to Palmyra, N. Y., in the summer of 1816. The family embraced nine children, Joseph, Jr., being the fourth in the order of their ages. . . . At Palmyra, Mr. Smith, Sr., opened ‘a cake and beer shop,’ as described by his signboard, doing business on a small scale, by the profits of which, added to the earnings of an occasional day’s work on hire by himself and his elder sons, for the village and farming people, he was understood to secure a scanty but honest living for himself and family. . . . In 1818 they settled upon a nearly wild or unimproved piece of land, mostly covered with standing timber, situate about two miles south of Palmyra. . . . Little improvement was made upon this land by the Smith family in the way of clearing, fencing, or tillage. . . . The larger proportion of the time of the Smiths . . . was spent in hunting and fishing . . . and idly lounging around the stores and shops in the village. . . . At this period in the life and career of Joseph Smith, Jr., or ‘Joe Smith,’ as he was universally named, and the Smith family, they were popularly regarded as an illiterate, whiskey-drinking, shiftless, irreligious race of people—the first named, the chief subject of this biography, being unanimously voted the laziest and most worthless of the generation. . . . Taciturnity was among his characteristic idiosyncracies, and he seldom spoke to any one outside of his intimate associates, except when first addressed by another; and then, by reason of his extravagancies of statement, his word was received with the least confidence by those who knew him best. He could utter the most palpable exaggeration or marvellous absurdity with the utmost apparent gravity. . . . He was, however, proverbially good-natured, very rarely if ever indulging in any combative spirit toward any one, whatever might be the provocation, and yet was never known to laugh. Albeit, he seemed to be the pride of his indulgent father, who has been heard to boast of him as the ‘genus of the family,’ quoting his own expression. Joseph, moreover, as he grew in years, had learned to read comprehensively, in which qualification he was far in advance of his elder brother, and even of his father. . . . As he . . . advanced in reading and knowledge, he assumed a spiritual or religious turn of mind, and frequently perused the Bible, becoming quite familiar with portions thereof. . . . The final conclusion announced by him was, that all sectarianism was fallacious, all the churches on a false foundation, and the Bible a fable. . . . In September, 1819, a curious stone was found in the digging of a well upon the premises of Mr. Clark Chase, near Palmyra. This stone attracted particular notice on account of its peculiar shape, resembling that of a child’s foot. It was of a whitish, glassy appearance,

though opaque, resembling quartz. Joseph Smith, Sr., and his elder sons Alvin and Hyrum, did the chief labor of this well-digging, and Joseph, Jr., who had been a frequenter in the progress of the work, as an idle looker-on and lounge, manifested a special fancy for this geological curiosity, and he carried it home with him. . . . Very soon the pretension transpired that he could see wonderful things by its aid. . . . The most glittering sights revealed to the mortal vision of the young impostor, in the manner stated, were hidden treasures of great value, including enormous deposits of gold and silver sealed in earthen pots or iron chests, and buried in the earth in the immediate vicinity of the place where he stood. These discoveries finally became too dazzling for his eyes in daylight, and he had to shade his vision by looking at the stone in his hat! . . . The imposture was renewed and repeated at frequent intervals from 1820 to 1827, various localities being the scenes of . . . delusive searches for money [for carrying on which Smith collected contributions from his dupes], as pointed out by the revelations of the magic stone. . . . Numerous traces of the excavations left by Smith are yet remaining as evidences of his impostures and the folly of his dupes, though most of them have become obliterated by the clearing off and tilling of the lands where they were made." In the summer of 1827 "Smith had a remarkable vision. He pretended that, while engaged in secret prayer, alone in the wilderness, an 'angel of the Lord' appeared to him, with the glad tidings that 'all his sins had been forgiven'; . . . also that he had received a 'promise that the true doctrine and the fulness of the doctrine and the fulness of the gospel should at some future time be revealed to him.' . . . In the fall of the same year Smith had yet a more miraculous and astonishing vision than any preceding one. He now arrogated to himself, by authority of 'the spirit of revelation,' and in accordance with the previous 'promises' made to him, a far higher sphere in the scale of human existence, assuming to possess the gift and power of 'prophet, seer, and revelator.' On this assumption he announced to his family friends and the bigoted persons who had adhered to his supernaturalism, that he was 'commanded,' upon a secretly fixed day and hour, to go alone to a certain spot revealed to him by the angel, and there take out of the earth a metallic book of great antiquity in its origin, and of immortal importance in its consequences to the world, which was a record, in mystic letters or characters, of the long-lost tribes of Israel, . . . who had primarily inhabited this continent, and which no human being besides himself could see and live; and the power to translate which to the nations of the earth was also given to him only, as the chosen servant of God. . . . Accordingly, when the appointed hour came, the prophet, assuming his practised air of mystery, took in hand his money-digging spade and a large napkin, and went off in silence and alone in the solitude of the forest, and after an absence of some three hours returned, apparently with his sacred charge concealed within the folds of the napkin. . . . With the book was also found, or so pretended, a huge pair of spectacles in a perfect state of preservation, or the Urim and Thummim, as afterward interpreted, whereby the mystic record was to be translated and the

wonderful dealings of God revealed to man, by the superhuman power of Joseph Smith. . . . The sacred treasure was not seen by mortal eyes, save those of the one anointed, until after the lapse of a year or longer time, when it was found expedient to have a new revelation, as Smith's bare word had utterly failed to gain a convert beyond his original circle of believers. By this amended revelation, the veritable existence of the book was certified to by eleven witnesses of Smith's selection. It was then heralded as the Golden Bible, or Book of Mormon, and as the beginning of a new gospel dispensation. . . . The spot from which the book is alleged to have been taken is the yet partially visible pit where the money speculators had previously dug for another kind of treasure, which is upon the summit of what has ever since been known as 'Mormon Hill,' now owned by Mr. Anson Robinson, in the town of Manchester, New York. This book . . . was finally described by Smith and his echoes as consisting of metallic leaves or plates resembling gold, bound together in a volume by three rings running through one edge of them, the leaves opening like an ordinary paper book. . . . Translations and interpretations were now entered upon by the prophet," and in 1830 the "Book of Mormon" was printed and published at Palmyra, New York, a well-to-do farmer, Martin Harris, paying the expense. "In claiming for the statements herein set forth the character of fairness and authenticity, it is perhaps appropriate to add . . . that the locality of the malversations resulting in the Mormon scheme is the author's birthplace; that he was well acquainted with 'Joe Smith,' the first Mormon prophet, and with his father and all the Smith family, since their removal to Palmyra from Vermont . . . ; that he was equally acquainted with Martin Harris and Oliver Cowdery, and with most of the earlier followers of Smith, either as money-diggers or Mormons; that he established at Palmyra, in 1823, and was for many years editor and proprietor of the 'Wayne Sentinel,' and was editorially connected with that paper at the printing by its press of the original edition of the 'Book of Mormon' in 1830; that in the progress of the work he performed much of the reading of the proof-sheets, comparing the same with the manuscript copies, and in the meantime had frequent and familiar interviews with the pioneer Mormons."—P. Tucker, *Origin, Rise and Progress of Mormonism*, ch. 1-5, and *preface*.—It is believed by many that the groundwork of the Book of Mormon was supplied by an ingenious romance, written about 1814 by the Rev. Solomon Spalding, a Presbyterian minister of some learning and literary ability, then living at New Salem (now Conneaut), Ohio. This romance, which was entitled "The Manuscript Found," purported to narrate the history of a migration of the lost ten tribes of Israel to America. It was never published; but members of Mr. Spalding's family, and other persons, who read it or heard it read, in manuscript, claimed confidently, after the appearance of the Book of Mormon that the main body of the narrative and the notable names introduced in it were identical with those of the latter. Some circumstances, moreover, seemed to indicate a probability that Mr. Spalding's manuscript, being left during several weeks with a publisher named Patterson, at Pittsburgh, came there into

the hands of one Sidney Rigdon, a young printer, who appeared subsequently as one of the leading missionaries of Mormonism, and who is believed to have visited Joseph Smith, at Palmyra, before the Book of Mormon came to light. On the other hand, Mormon believers have, latterly, made much of the fact that a manuscript romance without title, by Solomon Spalding, was found, not many years since, in the Sandwich Islands, by President Fairchild of Oberlin College, Ohio, and proved to bear no resemblance to the Book of Mormon. Spalding is said, however, to have written several romances, and, if so, nothing is proved by this discovery.—T. Gregg, *The Prophet of Palmyra*, ch. 1-11 and 41-45.

A. D. 1830-1846.—The First Hegira to Kirtland, Ohio, the Second to Missouri, the Third to Nauvoo, Illinois.—The Danites.—The building of the city and its Temple.—Hostility of the Gentiles.—The slaying of the Prophet.—“Immediately after the publication of the Book the Church was duly organized at Manchester. On April 6, 1830, six members were ordained elders—Joseph Smith, Sr., Joseph Smith, Jr., Hyrum Smith, Samuel Smith, Oliver Cowdery and Joseph Knight. The first conference was held at Fayette, Seneca county, in June. A special ‘revelation’ at this time made Smith’s wife ‘the Elect Lady and Daughter of God,’ with the high-sounding title of ‘Electa Cyria.’ In later years this lady became disgusted with her husband’s religion. . . . Another revelation was to the effect that Palmyra was not the gathering-place of the Saints, after all, but that they should proceed to Kirtland, in Ohio. Consequently, the early part of 1831 saw them colonized in that place, the move being known as ‘The First Hegira.’ Still another revelation (on the 6th of June) stated that some point in Missouri was the reliable spot. Smith immediately selected a tract in Jackson county, near Independence. By 1833 the few Mormons who had moved thither were so persecuted that they went into Clay county, and thence, in 1838, into Caldwell county, naming their settlement ‘Far West.’ The main body of the Mormons, however, remained in Kirtland from 1831 till they were forced to join their Western brethren in 1838. Brigham Young, another native of Vermont, joined at Kirtland in 1832, and was ordained an elder. The conference of elders on May 5, 1833, repudiated the name of Mormons and adopted that of ‘Latter-Day Saints.’ The first presidency consisted of Smith, Rigdon, and Frederick G. Williams. In May, 1835, the Twelve Apostles—among them Brigham Young, Heber C. Kimball and Orson Hyde—left on a mission for proselytes. . . . The Mormons were driven from Missouri by Governor Boggs’s ‘Extraordinary Order,’ which caused them to gain sympathy as having been persecuted in a slave State. They moved to Hancock county, Illinois, in 1840, and built up Nauvoo [on the Mississippi River, 14 miles above Keokuk] by a charter with most unusual privileges.”—F. G. Mather, *The Early Days of Mormonism* (Lippincott’s Mag., Aug. 1880).—In the midst of the troubles of Smith and his followers in Missouri, and before their removal to Nauvoo, there arose among them “the

mysterious and much dreaded band that finally took the name of Danites, or sons of Dan, concerning which so much has been said while so little is known, some of the Mormons even denying its existence. But of this there is no question. Says Burton: ‘The Danite band, a name of fear in the Mississippi Valley, is said by anti-Mormons to consist of men between the ages of 17 and 49. They were originally termed Daughters of Gideon, Destroying Angels—the gentiles say devils—and, finally, Sons of Dan, or Danites, from one of whom was prophesied he should be a serpent in the path. They were organized about 1837 under D. W. Patten, popularly called Captain Fearnot, for the purpose of dealing as avengers of blood with gentiles; in fact they formed a kind of death society, desperadoes, thugs, hashshashiyun—in plain English, assassins in the name of the Lord. The Mormons declare categorically the whole and every particular to be the calumnious invention of the impostor and arch apostate, Mr. John C. Bennett. John Hyde, a seceder, states that the Danite band, or the United Brothers of Gideon, was organized on the 4th of July, 1838, and was placed under the command of the apostle David Patten, who for the purpose assumed the name of Captain Fearnot. It is the opinion of some that the Danite band, or Destroying Angels as again they are called, was organized at the recommendation of the governor of Missouri as a means of self-defence against persecutions in that State.’—H. H. Bancroft, *Hist. of the Pacific States*, v. 21, pp. 124-126.—“The Mormons first attracted national notice about the time they quitted Missouri to escape persecution and took refuge in Illinois. In that free State a tract of land was granted them and a charter too carelessly liberal in terms. The whole body, already numbering about 15,000, gathered into a new city of their own, which their prophet, in obedience to a revelation, named Nauvoo; here a body of militia was formed under the name of the Nauvoo legion; and Joe Smith, as mayor, military commander, and supreme head of the Church, exerted an authority almost despotic. The wilderness blossomed and rejoiced, and on a lofty height of this holy city was begun a grotesque temple, built of limestone, with huge monolithic pillars which displayed carvings of moons and suns. . . . Nauvoo was well laid out, with wide streets which sloped towards well-cultivated farms; all was thrift and sobriety, no spirituous liquors were drunk, and the colonists here, as in their former settlements, furnished the pattern of insect industry. The wonderful proselyting work of this new sect abroad had already begun, and recruits came over from the overplus toilers in the British factory towns. . . . But there was something in the methods of this sect, not to speak of the jealousy they excited by their prosperity, which bred them trouble here as everywhere else where they came in contact with American commonplace life. It was whispered that the hierarchy of impostors grew rich upon the toils of their simple followers. Polygamy had not yet received the sanction of a divine revelation; and yet the first step towards it was practised in the theory of ‘sealing wives’ spiritually, which Smith had begun in some mysterious way that it baffled the gentile to discover. Sheriffs, too, were forbidden to serve civil process in Nauvoo without the written permission of its mayor. All

these strange scandals of heathenish pranks, and more, besides, stirred up the neighboring gentiles, plain Illinois backwoodsmen; and the more so that, besides his 3,000 militia, the Mormon prophet controlled 6,000 votes, which, in the close Presidential canvass of 1844, might have been enough to decide the election. Joe Smith, indeed, whose Church nominated him for President, showed a fatal but thoroughly American disposition at this time to carry his power into politics. This king of plain speech, who dressed as a journeyman carpenter, suppressed a newspaper which was set up by seceding Mormons. When complaint was made he resisted Illinois process and proclaimed martial law; the citizens of the surrounding towns armed for a fight. Joe Smith was arrested and thrown into jail at Carthage with his brother Hiram. The rumor spreading that the governor was disposed to release these prisoners, a disorderly band gathered at the jail and shot them [June 27, 1844]. Thus perished Smith, the Mormon founder. His death at first created terror and confusion among his followers, but Brigham Young, his successor, proved a man of great force and sagacity. The exasperated gentiles clamored loudly to expel these religious fanatics from Illinois as they had been expelled from Missouri; and finally, to prevent a civil war, the governor of the State took forcible possession of the holy city, with its unfinished temple, while the Mormon charter of Nauvoo was repealed by the legislature. The Mormons now determined [1846] upon the course which was most suited to their growth, and left American pioneer society to found their New Jerusalem on more enduring foundations west of the Rocky Mountains."—J. Schouler, *Hist. of the U. S.*, v. 4, pp. 547-549.

ALSO IN: T. Ford, *Hist. of Illinois*, ch. 8 and 10-11.—A. Davidson and B. Stuvé, *Hist. of Illinois*, ch. 41.—J. Remy and J. Brenehley, *Journey to Great Salt Lake City*, bk. 2, ch. 2-3 (v. 1).—R. F. Burton, *The City of the Saints*, p. 359.

A. D. 1846-1848.—The gentile attack on Nauvoo.—Exodus of "the Saints" into the wilderness of the West.—Their settlement on the Great Salt Lake.—"During the winter of 1845-6 the Mormons made the most prodigious preparations for removal. All the houses in Nauvoo, and even the temple, were converted into work-shops; and before spring more than 12,000 wagons were in readiness. The people from all parts of the country flocked to Nauvoo to purchase houses and farms, which were sold extremely low, lower than the prices at a sheriff's sale, for money, wagons, horses, oxen, cattle, and other articles of personal property which might be needed by the Mormons in their exodus into the wilderness. By the middle of May it was estimated that 16,000 Mormons had crossed the Mississippi and taken up their line of march with their personal property, their wives and little ones, westward across the continent to Oregon or California; leaving behind them in Nauvoo a small remnant of 1,000 souls, being those who were unable to sell their property, or who having no property to sell were unable to get away. The twelve apostles went first with about 2,000 of their followers. Indictments had been found against nine of them in the circuit court of the United States for the district of Illinois at its December term, 1845, for counterfeiting the current coin of the United States. The United States

Marshal had applied to me [the writer being at that time Governor of Illinois] for a militia force to arrest them; but in pursuance of the amnesty agreed on for old offences, believing that the arrest of the accused would prevent the removal of the Mormons, and that if arrested there was not the least chance that any of them would ever be convicted, I declined the application unless regularly called upon by the President of the United States according to law. . . . It was notorious that none of them could be convicted; for they always commanded evidence and witnesses enough to make a conviction impossible."—T. Ford, *Hist. of Illinois*, ch. 13.—"The Saints who had as yet been unable to leave Nauvoo continued to labour assiduously at the completion of the temple, so as to accomplish one of the most solemn prophecies of their well-beloved martyr. The sacred edifice was ultimately entirely finished, at the end of April, 1846, after having cost the Saints more than a million dollars. It was consecrated with great pomp on the 1st and 2nd of May, 1846. . . . The day after the consecration of the temple had been celebrated, the Mormons withdrew from the building all the sacred articles which adorned it, and satisfied with having done their duty in accomplishing, though to no purpose otherwise, a Divine command, they crossed the Mississippi to rejoin those who had gone before them. Nauvoo was abandoned. There remained within its deserted walls but some hundred families, whom the want of means and the inability to sell their effects had not allowed as yet to start upon the road to emigration. The presence of those who were thus detained, together with the bruit caused by the ceremony of dedication, raised the murmurs of the gentiles, and seemed to keep alive their animosity and alarm. Their eager desire to be entirely rid of the Mormons made them extremely sensitive to every idle story respecting the projects of the latter to return. They imagined that the Saints had only left in detachments to seek recruits among the red-skins, meaning to come back with sufficient force once more to take possession of their property in Illinois. These apprehensions rose to such a pitch that the anti-Mormons plunged into fresh acts of illegality and barbarism. . . . On the 10th of September, 1846, an army of 1,000 men, possessing six pieces of artillery, started to begin the attack under the direction of a person named Carlin, and of the Reverend Mr. Brockman. Nauvoo had only 300 men to oppose to this force, and but five small cannon, made from the iron of an old steamboat. The fire opened on the afternoon of the 10th, and continued on the 11th, 12th and 13th of September." Every attack of the besiegers was repulsed, until they consented to terms under which the remnant of the Mormons was to evacuate the town at the end of five days. "The Mormons had only three men killed and a few wounded during the whole affair; the loss of their enemies is unknown, but it would seem that it was heavy. It was agreed that a committee of five persons should remain at Nauvoo to attend to the interests of the exiles, and on the 17th of September, while the enemy, to the number of 1,625, entered the city to plunder, the remnant of the Mormons crossed the Mississippi to follow 'the track of Israel towards the west.' . . . About the end of June, 1846, the first column of the emigrants arrived on the banks of the Missouri,

a little above the point of confluence of this immense river with the Platte, in the country of the Pottawatamies, where it stopped to await the detachments in its rear. This spot, now known by the name of Council Bluffs, was christened Kanesville by the Mormons. . . . At this place, in the course of July, the federal government made an appeal to the patriotism of the Mormons, and asked them to furnish a contingent of 500 men for the Mexican war. Did the government wish to favour the Saints by affording them an opportunity of making money by taking service, or did it merely wish to test their fidelity? This we cannot decide. . . . The Saints generally regarded this levy as a species of persecution; however . . . they furnished a battalion of 520 men, and received \$20,000 for equipment from the war department." The head quarters of the emigration remained at Kanesville through the winter of 1846-47, waiting for the brethren who had been left behind. There were several encampments, however, some of them about 200 miles in advance. The shelters contrived were of every kind—huts, tents, and caves dug in the earth. The suffering was considerable and many deaths occurred. The Indians of the region were Pottawatamies and Omahas, both hostile to the United States and therefore friendly to the Mormons, whom they looked upon as persecuted foes of the American nation. "On the 14th of April [1847], Brigham Young and eight apostles, at the head of 143 picked men and 70 carts laden with grain and agricultural implements, started in search of Eden in the far-west. . . . The 23rd of July, 1847, Orson Pratt, escorted by a small advanced guard, was the first to reach the Great Salt Lake. He was joined the following day by Brigham Young and the main body of the pioneers. That day, the 24th of July, was destined to be afterwards celebrated by the Mormons as the anniversary of their deliverance. . . . Brigham Young declared, by divine inspiration, that they were to establish themselves upon the borders of the Salt Lake, in this region, which was nobody's property, and wherein consequently his people could follow their religion without drawing upon themselves the hatred of any neighbours. He spent several weeks in ascertaining the nature of the country, and then fixed upon a site for the holy city. . . . When he had thus laid the foundations of his future empire, he set off on his return to Council Bluffs, leaving on the borders of the Salt Lake the greater portion of the companions who had followed him in his distant search. During the summer, a convoy of 566 waggons, laden with large quantities of grain, left Kanesville and followed upon the tracks of the pioneers. . . . On their arrival at the spot indicated by the president of the Church, they set to work without a moment's repose. Land was tilled, trees and hedges planted, and grain sown before the coming frost." The main body of the emigrants, led by Brigham Young, moved from the banks of the Missouri about the 1st of May, 1848, and arrived at the Salt Lake the following autumn.—J. Remy and J. Brencley, *Journey to Great-Salt-Lake City*, bk. 2, ch. 4 (v. 1).—"On the afternoon of the 22d [August, 1847] a conference was held, at which it was resolved that the place should be called the City of the Great Salt Lake. The term 'Great' was retained for several years, until changed by legislative enactment. It was so named in contradistinction

to Little Salt Lake, a term applied to a body of water some 200 miles to the south."—H. H. Bancroft, *Hist. of the Pacific States*, v. 21, ch. 10.

MOSCOW: A. D. 1147.—Origin of the city.—"The name of Moscow appears for the first time in the chronicles at the date of 1147. It is there said that the Grand Prince George

Dolgorouki, having arrived on the domain of a boyard named Stephen Koutchko, caused him to be put to death on some pretext, and that, struck by the position of one of the villages situated on a height washed by the Moskowa, the very spot whereon the Kremlin now stands, he built the city of Moscow. . . . During the century following its foundation, Moscow remained an obscure and insignificant village of Souzdal. The chroniclers do not allude to it except to mention that it was burned by the Tartars (1237), or that a brother of Alexander Nevski, Michael of Moscow, was killed there in a battle with the Lithuanians. The real founder of the principality of the name was Daniel, a son of Alexander Nevski, who had received this small town and a few villages as his appanage. . . . He was followed, in due course, by his brothers George and Ivan."

MUSIC.—Early Study of its Laws.—The state of music was so imperfect as hardly to deserve the name of a system, until about the middle of the 6th century, when there arose in Greece "a great philosopher Pythagoras, whose genius enabled him not only to effect great im-

provements in the capabilities of music, but to establish for the art a definite and scientific basis intelligible and available for all time. He was, indeed, the founder of theoretical music; for it was he who first traced out the laws which governed the relations of sounds to each other, and by this means brought music within the domain of natural philosophy. He established the principle that intervals could be appreciated intellectually by the aid of numbers, instead of, as formerly, by the ear alone. . . . The way in which Pythagoras effected this was by means of the stretched strings used for the lyre. He had acuteness enough to perceive the fundamental fact . . . that the length of the string might be made to supply an exact definition of the pitch of the note it sounded. Hence he was enabled to attach to each sound a certain numerical value, and thus to compare it with other sounds, and to establish positive and definite relations between them. . . . The importance of this step, connecting for the first time music and mathematics, can hardly be overrated; and as the method Pythagoras introduced has become verified and established in use by all subsequent experience and investigation, he is fairly entitled to be called the Father of Musical Science. . . . In studying the divisions of his string, he perceived that the simplest of these divisions, namely, into two equal parts, gave a note which his ear told him had obvious musical relations with the fundamental one, and this settled for all time the predominance of the octave over all other musical intervals. . . . He found that two-thirds the length of the original string would give an interval that would conveniently subdivide the octave. This interval we now call the fifth. Again following the same principle, he next divided his string into four equal parts, and he found that three-fourths the length of the string gave another subordinate division at an interval which we now call the fourth. . . . These three intervals, as settled by Pythagoras, have been ever since the most important intervals in music. . . . The determination of the fifth and the fourth gave a means of establishing with precision an interval of much smaller dimensions, namely, the difference between them. This was called a tone; it furnished an appropriate means of completing the subdivision of the octave, according to the diatonic system, which is a scale characterized by intervals of tones. . . . The principle of the octave having been once established, it was obviously easy to extend the scale, upwards or downwards, or both, by adding octaves of notes previously existing. This was done, and the scale was at length enlarged to two octaves. . . . The later Greeks denoted the various sounds by arbitrary characters. The Romans adopted the scale, but abolished all the Greek designations, and named the fifteen notes by their own Latin letters, from A to P inclusive. Near the end of the 4th century, Ambrose introduced music into the service of the Church, adopting, with the Romans, the simple Greek diatonic scale. Two centuries later, Gregory amplified and improved the work of his predecessor, and introduced a great simplification in the nomenclature."—W. Pole, *The Philosophy of Music*, ch. 7.

Early Christian Music.—**Ambrosian and Gregorian.**—"Near the end of the sixth century . . . Pelagius II. sent a young man named

Gregory to Constantinople as papal legate to the Court of the Emperor. He, remaining in Constantinople for four years and more, became acquainted with all the musical science of the time, which was in a manner locked up there from the rest of the world; and there he heard the Christian music declaimed in a rare and, as it often seemed to him, a delightful way. . . . Coming from thence a learned musician, and skilled in the most refined style of Christian music, he afterwards became Pope of Rome [Gregory I., called 'Saint Gregory,' and 'Gregory the Great']. . . . The idea now came upon him of gathering the ancient Christian chants and psalms from all parts of the world, and uniting them into one mighty work, which should remain forever the meeting-ground of Christian music, as Rome was to be of Christian faith. Having collected them, he sorted and arranged them in the form of the services, so that there might be different chants or tunes for every Sunday and holy-day in the year. More difficult than sorting and arranging the tunes was giving them a musical structure. . . . With the genuine pagan music they had nothing in common, for they had no rhythm. They were couched in no scales, for they had grown up among men ignorant of music, and, even at the time we find them, were but half emerged from speech. It was, therefore, difficult for St. Gregory to convey a musical structure to them without diminishing considerably from their original character. Yet this he contrived so skilfully that, in spite of much that is new, we may still easily hear the voices of untrained singers and the utterances of simple worshippers echoing throughout them all, and catch song springing like a rose from speech. First, what were the musical portions of the service? . . . The Kyrie Eleison and the Alleluia had continued in use among Christians from the primitive times . . . and doubtless with but little change of singing; only there was this difference, that they were not sung or chanted now as ejaculations by the congregation as often as the fancy took them, but at definite places in the service. Besides these, there was the Amen, a kind of acroteleutic, that was sung at the close of every prayer. Of longer pieces, the Cherubic Hymn, the Trisagion, had been brought from Constantinople, appearing in Latin form as *Tersanctus* or *Sanctus*; the Angelic Hymn, 'Glory be to God on high,' *Gloria in excelsis*, which was sung immediately after the Kyrie Eleison; and new pieces of similar kind: the *Agnus Dei*; the Creed, which was now beginning to be sung as it was arranged at the Council of Nicæa; and short antiphons or responses of a line or two in different parts of the service. But particularly there were the introits and graduals, which were established by St. Celestine, Pope of Rome, in 422 A. D., who ordained that the Psalms of David should be chanted through in the course of the year, by taking sometimes one, sometimes another, at the beginning of the service; and this psalm that ushered in the service was called the Introit, because while it was being sung the priest made his entry. . . . The Gradual was sung between the Alleluia and the Epistle—indeed, the Alleluia should rather be considered as an appendage to the Gradual, and the note of jubilee that concluded it: for this was the happiest moment of the service, when, the Epistle being finished, the

choir stood on the steps of the chancel ('in gradibus') and sang this Gradual, or 'Psalm of the Steps,' which was followed by a prolonged note of Alleluia. . . . St. Ambrose, in the north of Italy, before the age of Gregory, had attempted the same work, but with neither such skill nor with such abiding effect. . . . The Ambrosian song is always described as 'mensurabilis et harmonicus,' 'rhythmical and tuneful'. . . . It was in keeping with this tendency that Ambrose should have been the father of the 'hymn.' The hymn had a very different history from the chant, being traceable in the clear, symmetric form of its music to the choruses of the Greek and Roman stage, and being identical in its measure and the contour of its melody with the ordinary Roman songs, which were the delectation of the masses in those days, as popular airs are at present. . . . Between the antiphony of Ambrose and the antiphony of Gregory (for so were the books called, because they contained the antiphons, or musical pieces, that were sung in the services), there seems for a long time to have been the greatest rivalry; and more especially in the northern parts of Italy, where Ambrose's influence had ever been strong. . . . The Gregorian song began to spread over Europe. . . . Wherever he [Gregory] sent his missionaries, there also he sent copies of the Gregorian song, as he had arranged it in his antiphony. He bade them go singing among the people. In this way St. Cyriacus went to Spain, St. Fulgentius to Africa, St. Virgilius to France, and St. Augustine to Britain. . . . The depredations of the Lombards, and the establishment of a powerful Lombard kingdom in the north and north-west of Italy, were hostile to the policy which Gregory had laid down; for with the Lombards came the music of Ambrose again, and during the century that followed Gregory's death half Italy owned the Lombard sway. . . . So did things stand when that century was over, and Charlemagne ascended the throne of the Franks. . . . Charlemagne, having conquered the Lombards, proceeded to Rome to meet the Pope and the cardinals, and to consider the arrangements that were to be made for the settlement of his new conquest. . . . The Pope called a great synod, . . . and the synod passed a decree commissioning Charlemagne 'to proceed through the length and breadth of Italy, and to utterly uproot everything which in singing or in ritual differed from the practice of the Roman Church, so that there might be unity throughout the land.' Armed with this commission, Charlemagne posted to Milan, and seizing all the chant and hymn books of the Ambrosian song, he made bonfires of them in the middle of the city. . . . Those of the clergy who refused to give up their books were to be put to the sword, and many both of the higher and lower orders of clergy perished in this manner. . . . The same measures were taken throughout the rest of Lombardy. In a few weeks the flourishing empire of the Ambrosian song was reduced to desolation."—J. F. Rowbotham, *A History of Music*, bk. 3, ch. 2-4.—See, also, MILAN: A. D. 374-397.

The Organ.—"The term 'organum' was used to express the first crude conceptions of the science of harmony. It would appear, that in the rude instruments called organs, in the 11th and 12th centuries, the pipes were disposed in such a manner that every key sounded, besides

its fundamental note, the fifth and the octave of that note. Such a succession of fifths and octaves was called *Organum*; no doubt, par excellence. The history of the organ is wrapped in much uncertainty. In the fourth chapter of Genesis, we read that Jubal was 'the father of all such as handle the harp and the organ.' No one, however, will for a moment suppose that Jubal attained to the construction of anything like the modern organ. In Job (chap. xxx. verse 31) we read, 'And my organ unto the voice of them that weep.' The Hebrew word (*gnubab*), here rendered organ, signifies an ear of corn with the stalk, or straw; hence a pipe made of such stalk, or straw. The organ, therefore, of Jubal and Job, was doubtless nothing more than a reed, or pipe; or, at most, a set of reeds of unequal length, joined together side by side, like the Pandean pipe of the Greeks. It consisted originally of seven pipes, afterwards increased to twelve. We may, then, pronounce the Pan-pipe, or *Syrinx*, to have been the prototype of organ-building. The first step to improvement was to plant the pipes in a chest, with holes bored in the top, in which the pipes were made to stand. Wind, being forced into the chest, entered the pipes at the bottom, instead of being blown from the mouth into the top of them as heretofore. All the pipes would then sound at once, and had to be stopped by the fingers. When the number of pipes was increased, this mode of operation became impracticable; and valves were then contrived to cut off the wind, one under each pipe, worked by levers. A further increase in the number of the pipes required a larger wind-chest; and this again necessitated some mechanical process to supply the wind, which was accomplished by the aid of water-power. Hence the instrument received the title of the *Hydraulic Organ*. Tertullian, who was Bishop of Carthage in the 2nd century, pronounces *Ctesibius*, a barber of Alexandria, to have been the inventor of the hydraulic organ, about B. C. 200. Athenæus also attributes its origin to the same person. . . . The mechanical operation of the hydraulic organ is unintelligible from the descriptions remaining of it, chiefly that of Vitruvius. We learn, however, that it consisted of pipes, a wind-chest, and registers, or stops. The hydraulic organ failing to produce a satisfactory result, a return was made to the ancient method of blowing by manual labor; and the instrument took the name of the *Pneumatic Organ*. . . . Authors are by no means agreed as to the time when the organ was first introduced into the church-service. Platina, in his 'Lives of the Popes,' asserts that it was first used for religious worship by Pope Vitalianus, who was raised to the pontifical chair, A. D. 663. Previous to this time, however, instruments were used in divine service, as appears from the united testimony of Justin Martyr and Eusebius. Ambrose, Bishop of Milan (circ. A. D. 380), caused them to be used in his cathedral. They were soon introduced into France. Pepin (the father of the great Charlemagne), King of the Franks, an ardent and devout Christian, first introduced singing and ceremonies of the Romish church into France. He quickly perceived the need of an organ to support the choir. He accordingly (as the instrument was at that time unknown in France) applied to the Emperor Constantine Copronymus at Constantinople, who

sent him a present of 'a great organ with leaden pipes,' which was placed in the Church of St. Corneille, at Compiègne. The French were not slow to equal this and other specimens of foreign ingenuity; and so successful were their efforts, that in the 9th century, it is said, the best organs were made in France and Germany. Soon after, we find them in common use in England, constructed by English artists, with pipes of copper fixed in gilt frames. The earliest specimens of church-organs were very small, and were called *portatives* (from the Latin *portare*, to carry; because they could be moved about from one part of the church to another). Another term for them was *regals* (from the Italian *rigabello*). . . . Until nearly the end of the last century, an officer of the Chapel Royal, in London, was styled 'tuner of the regalls.' In contradistinction to and succeeding the portable, we have the positive organ. This instrument was made with a key-board, and played with both hands. . . . By the end of the 10th century, organs were becoming pretty common in Germany; and in England there was one, of which particular mention is made, in Winchester Cathedral, having 26 bellows and 400 pipes. The close of the 11th century saw a great advance made, when we learn that at Magdeburg an organ was built, the first in which a key-board was introduced in place of the bars, or levers, by which the notes had hitherto been played. The compass consisted of 16 keys. Eleven had hitherto been the largest amount; which was all that was needed to accompany the plain song before the invention of harmony. . . . In the 14th century, a most important improvement was made in the structure of the organ: the key-boards were increased in compass from one octave to three, and at the same time made much less clumsy. Hitherto the keys had been made so large (some of them five or six inches wide), and their motion so stiff, that they had to be struck with the clinched fist; hence the organist was termed *organorum pulsator*, striker of the organ. . . . Early in the next century, a German invented registers, or different stops. Improvements also were made in the pipes; and stopped pipes were invented, and also the pedals. In the 16th century the key-board was extended to four octaves, though the bottom octave was seldom complete. At this period also, Dr. Rimbault says that reed pipes were invented to imitate the tone of other instruments. . . . But the use of the reed, in the modern acceptance of the term, appears to have been known much farther back. . . . The Revolution in England, in the middle of the 17th century, was a dark period in the history of the organ. On Jan. 4, 1644, an ordinance was passed in the Houses of Parliament. . . . 'for the speedy demolishing of all organs, images, and all matters of superstitious monuments.'—H. D. Nicholson, *The Organ Manual*, pp. 5-11.

The Pianoforte.—Its Evolution.—"Among the ancient stringed instruments, the harp and lyre are probably of the greatest antiquity. . . . The lyre was of many different shapes, . . . and the strings being partly carried, as in the pianoforte, over the sounding-board, . . . were not free to be struck upon both sides throughout their entire length by the plectra or by the fingers of the performer. This is the distinction between the harp and the lyre, for the harp can be played the whole length of the strings upon

both sides, as the sounding-board is differently placed. Both instruments were played with the fingers, and the lyre with the plectrum also, which was generally a small piece of ivory or bone, which the player pressed against the strings, snapping them as though they were pulled by the finger. The plectra were sometimes, however, short sticks, . . . held one in each hand, and were used for striking the strings of the instrument played upon, to set them in vibration. The first kind of plectrum suggested the crow-quill, that snapped the strings in the spinet and harpsichord; the second gave the idea of the hammer for striking the strings in the pianoforte, as the plectrum of wood was after some time covered on one side with leather, so that the performer could play softly by striking the strings with the part covered with leather, or loudly by striking with the other side. This was succeeded by the dulcimer hammers, from which those of the pianoforte are evidently borrowed." The "development of the lyre and dulcimer into the pianoforte, by the introduction of finger-keys, for raising many plectra at the same time, is of quite recent date. . . . The first keyed instrument was . . . the tamboura, but the first with finger-keys was the organ. . . . The next instrument with finger-keys was probably the clavictherium, or clavithierium, as it was sometimes termed, which was introduced about the year 1300 by the Italians, and was soon imitated by the Belgians and Germans. . . . Another instrument, deriving its name from employing the key (clavis), was the clavichord, which was in use before or at the same time as the clavictherium. It differed, however, both in construction and manner of producing the tone, the strings being of wire, and set in motion by striking and pressing instead of the snapping of the leather plectrum. . . . The instrument by which the clavichord was gradually superseded in England was the virginal. It was an improvement upon the clavictherium, to which it was very similar, brass wire being substituted for the cat-gut strings. . . . The English spinet was similar to the virginal, except in its shape, which was nearly that of a harp laid horizontally, supposing the clavier, or keyboard, to be placed on the outside of the trunk, or sounding-board. . . . Like the virginal, it had but one string to each note, which was set in vibration by means of the jack, with the raven or crow-quill attached. When a second string was added to each note to render the instrument more powerful and capable of some slight degree of expression, it was named the harpsichord, or horizontal harp. The harpsichord was in effect a double spinet, as two rows of quills were used. When the performer wished to play softly, he was compelled to take one hand off the key-board to move a stop to the right, when but a single string was twanged by the quill, the second row of jacks and quills being moved by the rail in which they were fixed, so that, when raised by the key the quills passed between the strings without setting them in vibration. If the player then required greater power he would move the stop to the left again. . . . Many rows of jacks, and in some instances an additional set of keys, were afterwards added, and other ingenious inventions were introduced into the harpsichord, until it became quite an intricate piece of mechanism to produce such comparatively weak effects. Handel's harpsichords,

which were of this description, had three and four strings to each note. . . . Although little more than a century and a half has elapsed since the pianoforte was invented, the name of the inventor is almost lost amidst a crowd of claimants and appropriators. In England the invention is claimed for Father Wood, an English monk at Rome, who manufactured a pianoforte in 1711. . . . Although Father Wood's claim to the invention of the piano is often stoutly maintained, the best authenticated is that of the Italians, for in the same or previous year that it is said Father Wood made his piano, Bartolomeo Cristofali, of Padua, invented and made a piano. . . . Although Cristofali's claim to the invention seems perfectly clear, it is still greatly disputed."—E. Brinsmead, *Hist. of the Pianoforte*, ch. 2-4.

The Violin.—"Bowed instruments were crude in structure, and cumbrous for performance until the great change that was wrought in their fabrication in the latter half of the 16th century, and previous music for them was limited accordingly in character and effect. The viol was an instrument with many strings, sometimes five, sometimes seven, which had frets across its fingerboard; behind these, the strings were stopped by the finger of the player, and the vibrating length of the string was thus reduced to the extent from the fret to the bridge, but the intonation was fixed by these frets for each note without possible variability from the higher or lower position of the finger. Viols were of different sizes, and were named accordingly treble, tenor, and bass; they were made in 'sets,' and music for them was called a 'Consort of Viols,' as that for a set of hautboys was called a 'Consort of Hautboys,' while that for a combination of bowed with wind instruments was called 'broken music.' The viol held against the arm was called 'Viol da Braccio,' and that held against the leg was called 'Viol da Gamba.' It seems to have been Gasparo di Salo (1555-1600) of Brescia or Bologna and his contemporary Maggini who were the first to effect the important modifications which on the subtlest scientific principles have brought the whole class of instruments to their present high state of perfection. The word viola signifies the original instrument produced by these makers; the violino, or diminutive of viola, seems to have been the next modification; the violone (the double bass), or augmentative of viola, is supposed to have followed; and the violoncello, or diminutive of violone, is believed to have been the last adaptation of this class of instruments. The world-renowned Cremona makers directly followed those of Brescia, and raised the violin to a perfection of structure which is apparently impossible to reproduce. Andrea Amati, the earliest of these, is supposed to have copied the work of Salo, though he died 23 years before him. The skill of this master was continued in his two sons, and culminated in his grandson Nicolo (1596-1684), whose productions are especially prized. The family of Guanieri were next in order of time: Andrea, the first of them, and his sons were pupils of Nicolo Amati, but Giuseppe (1683-1745), the nephew of Andrea, who is the most esteemed, wherever he was trained, worked on principles entirely his own. The glory of the Cremonese school was Antonio Stradivari (1649-1737), who worked under Nicolo Amati, but far surpassed his teacher, and effected

many valuable points of originality, besides surpassing all makers in his workmanship; his instruments are the most prized by players and collectors. In the Tyrol Jacob Steiner (1621-1683) made successful appropriation of Italian principles, but his violins by no means equal the best from Cremona."—G. A. Macfarren, *Musical Hist.*, pp. 92-3.

Opera.—"Choruses had been introduced in dramatic performances as far back as 1350, but they were always written in four parts, in the ecclesiastical style. In 1597 A. D., in a comic play by Orazzi Becchi, the text written for a single personage of the drama was sung in five-part choruses written in the madrigal style. Lovers of art began to see that such music was unsuited to drama. . . . The Florentine noble, Count Bardi, together with his friends, all art enthusiasts—for it was in Florence that the renaissance flourished best—resolved that there ought to be a better style of dramatic music. And at this point the exiled scholars from Constantinople made their influence felt in music. They talked of the Greek drama and its intonation or recitation in music, and Bardi and his friends at once set about reconstructing the true musical declamation of the Greeks. . . . Giovanni Bardi was a moving spirit in the festivities of the court. There he introduced his friends and they gave private dramatic performances. Ottavio Rinuccini, poet; Pietro Strozzi, poet and composer; Emilio del Cavaliere, ducal superintendent of fine arts; Vincenzo Galilei, composer, litterateur, lutist, mathematician, and father of the great astronomer Galileo; Girolamo Mei, musical theorist; Giulio Caccini, singer and composer, and Jacopo Peri, immortal as the composer of the first opera, were the 'choice and master spirits' of the club. . . . Galilei wrote a dramatic scene for one voice and one instrument on the lines about 'Ugolino' in Dante's 'Purgatorio.' His own was the voice; the viola, the instrument. The work was applauded by his friends. He wrote more and called them monodies. And these were the first vocal solos on record in the history of art-music. Previously when a solo was wanted some one of the parts of a polyphonic chorus was picked out and sung by one voice. Galilei wrote the first dramatic solo, without which opera is, of course, impossible. Caccini imitated Galilei and produced sonnets and canzonets for one voice. Then Emilio del Cavaliere wrote a pastoral play and set the entire text to music, which had never been done before. He made extensive use of the madrigal, and his work bore little resemblance to its successors. Next the poet Rinuccini wrote 'Daphne,' Jacopo Peri composed music for it, and it was performed with great success at the house of one Corsi in 1594. This stands upon the pages of musical history as the first opera. Peri immediately began another, and in 1600, at the marriage of Henry IV., of France, with Maria de Medici in Florence, he produced his 'Eurydice,' singing Orpheus himself. 'Daphne' made Peri known throughout Italy; 'Eurydice' made him celebrated throughout Europe. . . . The new form of court amusement speedily took its way to Venice, where it was somewhat modified by the influence of the emotional church style of Willaert, Cyprian di Rore, and Zarlino. Andrea Gabrielli and his nephew Giovanni were their successors, but they did little toward the develop-

ment of the new form of art. In 1568, however, the first genius of opera was born at Cremona. This was Claudio Monteverde, whose chief musical activity was during his directorship at the church of San Marco, Venice, from 1613 till his death in 1643. Monteverde was the Wagner of his time, and he was criticised in much the same way: for Artusi, of Bologna, said of him that 'he lost sight of the proper aim of music, viz., to give pleasure.' . . . Monteverde wrote a series of operas in Venice, and he was the cause of the establishment of the first opera house, the Teatro San Cassiano, opened in 1637 with 'Andromeda,' text by Ferrari and music by Manelli. Subsequently the theatre San Moise was opened with a revival of 'Arianna.' Opera became the reigning amusement of Venice, and up to 1727 no less than fifteen operatic enterprises were started, and up to 1734 four hundred operas by forty composers were produced."—W. J. Henderson, *The Story of Music*, ch. 2.

Oratorio.—"The development of the oratorio progressed side by side with that of the opera. For ages it had been the custom on important ecclesiastical occasions to perform 'miracle-plays,' or rude—we might say profane—dramas on sacred subjects. About the middle of the 16th century, St. Philip de Neri, a priest of Florence, devoted himself to the improvement of these performances, and introduced historical scenes or sacred allegories in the course of the services he held in his oratory. (Hence the term 'oratorio,' which is the Italian for 'oratory.') The first oratorio worthy the name was not produced till the year 1600, when 'L'Anima e corpo,' by Emilio del Cavaliere, was performed at a church in Rome. The composer arranged his accompaniments for the following instruments: a double lyre, a harpsichord, a double guitar (or 'theorbo') and two flutes. What Monteverde did, however, for the opera, was effected for oratorio by Giacomo Carissimi (1580-1673), who made many improvements in the existing form of the recitative, and invented the 'Arioso,' from which sprang the more elaborated 'Aria.' His best known works are 'Jephtha' and 'Jonah.'"—H. G. B. Hunt, *A Concise History of Music*, pp. 15-16.

MUTINY ACTS, The English.—In 1689 the Parliament (called a Convention at first) which settled the English crown upon William of Orange and Mary, "passed the first Act for governing the army as a separate and distinct body under its own peculiar laws, called 'The Mutiny Act.' . . . The origin of the first Mutiny Act was this. France had declared war against Holland, who applied under the treaty of Nimeguen to England for troops. Some English regiments refused to go, and it was felt that the common law could not be employed to meet the exigency. The mutineers were for the time by military force compelled to submit, happily without bloodshed; but the necessity for soldiers

to be governed by their own code and regulations became manifest. Thereupon the aid of Parliament was invoked, but cautiously. The first Mutiny Act was very short in enactments and to continue only six months. It recited that standing armies and courts martial were unknown to English law, and enacted that no soldier should on pain of death desert his colours, or mutiny. At the expiration of the six months another similar Act was passed, also only for six months; and so on until the present practice was established of regulating and governing the army, now a national institution, by an annual Mutiny Act, which is requisite for the legal existence of a recognised force, whereby frequent meeting of Parliament is indirectly secured, if only to preserve the army in existence."—W. II. Torriano, *William the Third*, ch. 7.—"These are the two effectual securities against military power: that no pay can be issued to the troops without a previous authorisation by the commons in a committee of supply, and by both houses in an act of appropriation; and that no officer or soldier can be punished for disobedience, nor any court-martial held, without the annual re-enactment of the mutiny bill."—II. MYSTERIES, Ancient Religious. See ELEUSINIAN MYSTERIES.

MYSTICISM.—QUIETISM.—"The peculiar form of devotional religion known under these names was not, as most readers are aware, the offspring of the 17th century. It rests, in fact, on a substratum of truth which is coeval with man's being, and expresses one of the elementary principles of our moral constitution. . . . The system of the Mystics arose from the instinctive yearning of man's soul for communion with the Infinite and the Eternal. Holy Scripture abounds with such aspirations—the Old Testament as well as the New; but that which under the Law was 'a shadow of good things to come,' has been transformed by Christianity into a living and abiding reality. The Gospel responds to these longings for intercommunion between earth and heaven by that fundamental article of our faith, the perpetual presence and operation of God the Holy Ghost in the Church, the collective 'body of Christ,' and in the individual souls of the regenerate. But a sublime mystery like this is not incapable of misinterpretation. . . . The Church has ever found it a difficult matter to distinguish and adjudicate between what may be called legitimate or orthodox Mysticism and those corrupt, degrading, or grotesque versions of it which have exposed religion to reproach and contempt. Some Mystics have been canonized as saints; others, no less deservedly, have been consigned to obloquy as pestilential heretics. It was in the East—proverbially the fatherland of idealism and romance—that the earliest phase of error in this department of theology was more or less strongly developed. We find that in the 4th century the Church was troubled by a sect called Massalians or Euchites, who placed the whole of religion in the habit of mental prayer; alleging as their authority the Scripture precept 'That men ought always to pray, and not to faint.' They were for the most part monks of Mesopotamia and Syria; there were many of them at Antioch when St. Epiphanius wrote his Treatise against heresies, A. D. 376. They held that every man is from his birth possessed by an evil spirit or familiar demon, who can only be cast out by the practice of continual prayer. They disparaged the Sacraments, regarding them as things indifferent: they rejected manual labor; and, although professing to be perpetually engaged in prayer, they slept, we are told, the greater part of the day, and pretended that in that state they received revelations from above. . . . The Massalians did not openly separate from the Church; they were condemned, however, by two Councils—one at Antioch in 391, the other at Constantinople in 426. Delusions of the same kind were reproduced from time to time in the Oriental Church; and, as is commonly the case, the originators of error were followed by a race of fanatics of an extreme type. They imagined that, by a process of profound contemplation, they could discern internally the light of the Divine Presence—the 'glory of God'—the very same which was disclosed to the Apostles on the Mount of Transfiguration. Hence they were also called Thaborites. The soul to which this privilege was vouchsafed had no need to practise any of the external acts

or rites of religion. . . . The theory of abstract contemplation, with the extraordinary fruits supposed to be derived from it, travelled in due course into the West, and there gave birth to the far-famed school of the Mystics, of which there were various ramifications. The earliest exponent of the system in France was John Scotus Erigena, the contemporary and friend of Charles the Bald. . . . Erigena incurred the censures of the Holy See; but the results of his teaching were permanent. . . . The Mystics, or Theosophists as some style them, attained a position of high renown and influence at Paris towards the close of the 12th century. Here two of the ablest expositors of the learning of the middle age, Hugh and Richard of St. Victor, initiated crowds of ardent disciples into the mysteries of the 'via interna,' and of 'pure love'—that marvellous quality by which the soul, sublimated and etherialized, ascends into the very presence-chamber of the King of kings. . . . The path thus traced was trodden by many who were to take rank eventually as the most perfect masters of spiritual science; among them are the venerated names of Thomas à Kempis, St. Bonaventure, John Tauler of Strasburg, Gerson, and St. Vincent Ferrier. . . . But, on the other hand, it is not less true that emotional religion has been found to degenerate, in modern as well as in ancient times, into manifold forms of moral aberration. . . . To exalt above measure the dignity and privileges of the spiritual element in man carries with it the danger of disparaging the material part of our nature; and this results in the preposterous notion that, provided the soul be absorbed in the contemplation of things Divine, the actions of the body are unimportant and indifferent. How often the Church has combated and denounced this most insidious heresy is well known to all who have a moderate acquaintance with its history. Under the various appellations of Beghards, Fratricelli, Cathari, Spirituals, Albigenses, Illuminati, Guerinets, and Quietists, the self-same delusion has been sedulously propagated in different parts of Christendom, and with the same ultimate consequences. A revival of the last-named sect, the Quietists, took place

in Spain about the year 1675, when Michel de Molinos, a priest of the diocese of Saragossa, published his treatise called 'The Spiritual Guide,' or, in the Latin translation, 'Manuductio spiritualis.' His leading principle, like that of his multifarious predecessors, was that of habitual abstraction of the mind from sensible objects, with a view to gain, by passive contemplation, not only a profound realisation of God's presence, but so perfect a communion with Him as to end in absorption into His essence. . . . Persons of the highest distinction—Cardinals, Inquisitors, nay, even Pope Innocent himself—were suspected of sharing these dangerous opinions. Molinos was arrested and imprisoned, and in due time the Inquisition condemned sixty-eight propositions from his works; a sentence which was confirmed by a Papal bull in August, 1687. Having undergone public penance, he was admitted to absolution; after which, in 'merciful' consideration of his submission and repentance, he was consigned for the rest of his days to the dungeons of the Holy Office. Here he died in November, 1692. . . . The principles of Quietism had struck root so deeply, that they were not to be soon dislodged either by the terrors of the Inquisition, or by the well-merited denunciations of the Vatican. The system was irresistibly fascinating to minds of a certain order. Among those who were dazzled by it was the celebrated Jeanne Marie De la Mothe Guyon," whose ardent propagation of her mystic theology in the court circles of France—where Fenelon, Madame de Maintenon, and other important personages were greatly influenced—gave rise to bitter controversies and agitations. In the end, Madame Guyon was silenced and imprisoned and Fenelon was subjected to humiliating papal censures.—W. H. Jervis, *Hist. of the Church of France*, v. 2, ch. 4.

NABATHEANS, The.—"Towards the seventh century B. C., the name Edomite suddenly disappears, and is used only by some of the Israelitish prophets, who, in doing so, follow ancient traditions. Instead of it is found the hitherto unknown word, Nabathean. Nevertheless the two names, Nabathean and Edomite, undoubtedly refer to the same people, dwelling in the same locality, possessing the same empire, with the same boundaries, and the same capital, Selah [Petra]. Whence arose this change of name? According to all appearances from an internal revolution, of which we have no record, a change in the royal race and in the dominant tribe."—F. Lenormant, *Manual of Ancient Hist.*, bk. 7, ch. 4.—"This remarkable nation [the Nabatheans, or Nabateans] has often been con-

founded with its eastern neighbours, the wandering Arabs, but it is more closely related to the Aramæan branch than to the proper children of Ishmael. This Aramæan or, according to the designation of the Occidentals, Syrian stock must have in very early times sent forth from its most ancient settlements about Babylon a colony, probably for the sake of trade, to the northern end of the Arabian gulf; these were the Nabatheans on the Sinaitic peninsula, between the gulf of Suez and Aila, in the region of Petra (Wadi Mousa). In their ports the wares of the Mediterranean were exchanged for those of India; the great southern caravan-route, which ran from Gaza to the mouth of the Euphrates and the Persian gulf, passed through the capital of the Nabatheans—Petra—whose still magnificent rock-palaces and rock-tombs furnish clearer evidence of the Nabathean civilization than does an almost extinct tradition."—T. Mommsen, *Hist. of Rome*, bk. 5, ch. 4.

NASR-ED-DEEN, Shah of Persia, A. D. 1848—.

NASSAU, The House of.—"We find an Otho, Count of Nassau, so long ago as the beginning of the 10th century, employed as general under the Emperor Henry I . . . in subduing a swarm of savage Hungarians, who for many years had infested Germany. . . . The same fortunate warrior had a principal hand afterwards in reducing the Vandals, Danes, Slavonians, Dalmatians, and Bohemians. Among the descendants of Otho of Nassau, Walram I and III more particularly distinguished themselves in the cause of the German Emperors; the former under the victorious Otho I, the latter under Conrad II. It was to these faithful services of his progenitors that, in a great measure, were owing the large possessions of Henry, surnamed the Rich, third in descent from the last mentioned Walram, and grandfather to the brave but unhappy Emperor Adolphus [deposed and slain at the battle of Gelheim, in 1298,—see GERMANY: A. D. 1273-1308]. The accession, by marriage, of Breda, Vianden, and other lordships in the Netherlands, gave the Nassaus such a weight in those provinces that John II of Nassau-Dillemburg, and his son Engelbert II, were both successively appointed Governors of Brabant by the Sovereigns of that State [Charles the Bold, Duke of Burgundy, and his son-in-law, the Emperor Maximilian]. . . . The last, who was likewise honoured with the commission of Maximilian I's Lieutenant-General in the Low-Countries, immortalized his fame, at the same time that he secured his master's footing there, by the glorious victory of Guinegate,"—or Guinegate, or the "Battle of the Spurs,"—see FRANCE: A. D. 1513-1515.—J. Breval, *Hist. of the House of Nassau*, pp. 2-3.—Engelbert II. dying childless, "was succeeded by his brother John, whose two sons, Henry and William, of Nassau, divided the great inheritance after their father's death. William succeeded to the German estates, became a convert to Protestantism, and introduced the Reformation into his dominions. Henry, the eldest son, received the family possessions and titles in Luxembourg, Brabant, Flanders and Holland, and distinguished himself as much as his uncle Engelbert, in the service of the Burgundo-Austrian house. The confidential friend of Charles V., whose governor he had been in that Emperor's boyhood, he was ever his most efficient and reliable adherent. It was he whose influence placed the imperial crown upon the head of Charles. In 1515 he espoused Claudia de Chalons, sister of Prince Philibert of Orange, 'in order,' as he wrote to his father, 'to be obedient to his imperial Majesty, to please the King of France, and more particularly for the sake of his own honor and profit.' His son René de Nassau-Chalons succeeded Philibert. The little principality of Orange, so pleasantly situated between Provence and Dauphiny, but in such dangerous proximity to the seat of the 'Babylonian

captivity' of the popes at Avignon, thus passed to the family of Nassau. The title was of high antiquity. Already in the reign of Charlemagne, Guillaume au Court-Nez, or 'William with the Short Nose,' had defended the little town of Orange against the assaults of the Saracens. The interest and authority acquired in the demesnes thus preserved by his valor became extensive, and in process of time hereditary in his race. The principality became an absolute and free sovereignty, and had already descended, in defiance of the Salic law, through the three distinct families of Orange, Baux, and Chalons. In 1544, Prince René died at the Emperor's feet in the trenches of Saint Dizier. Having no legitimate children, he left all his titles and estates to his cousin-german, William of Nassau [the great statesman and soldier, afterwards known as William the Silent], son of his father's brother William, who thus at the age of eleven years became William the Ninth of Orange."—J. L. Motley, *The Rise of the Dutch Republic*, pt. 2, ch. 1 (c. 1).—The Dutch branch of the House of Nassau is now represented by the royal family of Holland. The possessions of the German branch, in the Prussian province of Hesse-Nassau, after frequent partitioning, was finally gathered into a duchy, which Prussia extinguished and absorbed in 1866. NATIONALITY, The Principle of.—"Among the French a nationality is regarded as

NATIONALITY.

Among the French a nationality is regarded as

the work of history, ratified by the will of man. The elements composing it may be very different in their origin. The point of departure is of little importance; the only essential thing is the point reached. The Swiss nationality is the most complete. It embraces three families of people, each of which speaks its own language. Moreover, since the Swiss territory belongs to three geographical regions, separated by high mountains, Switzerland, which has vanquished the fatality of nature, from both the ethnographical and geographical point of view, is a unique and wonderful phenomenon. But she is a confederation, and for a long time has been a neutral country. Thus her constitution has not been subjected to the great ordeal of fire and sword. France, despite her diverse races—Celtic, German, Roman, and Basque—has formed a political entity that most resembles a moral person. The Bretons and Alsacians, who do not all understand the language of her government, have not been the least devoted of her children in the hour of tribulation. Among the great nations France is the nation par excellence. Elsewhere the nationality blends, or tends to blend, with the race, a natural development and, hence, one devoid of merit. All the countries that have not been able to unite their races into a nation, have a more or less troubled existence. Prussia has not been able to nationalize (that is the proper word to use) her Polish subjects; hence she has a Polish question, not to mention at present any other. England has an Irish question. Both Turkey and Austria have a number of such questions. Groups of people in various parts of the Austrian Empire demand from the Emperor that they may be allowed to live as Germans, Hungarians, Tsechs, Croatsians, in fact, even as Italians. They do not revolt against him; on the contrary, each of them offers him a crown. The time is, however, past when a single head can wear several crowns; to-day every crown is heavy. These race claims are not merely a cause of internal troubles; the agitations that they arouse may lead to great wars. Evidently no state will ever interpose between Ireland and England, but, while quarrels take place between Germans and Slavs, there will intervene the two conflicting forces of Pan-Germanism and Pan-Slavism, formidable results and final consequences of ethnographical patriotism. Pan-Germanism and Pan-Slavism are, indeed, not forces officially acknowledged and organized. The Emperor of Germany can honestly deny that he is a Pan-Germanist, and the Tsar that he is a Pan-Slavist. Germans and Slavs of Austria, and Slavs of the Balkans, may, for their part, desire to remain Austrian or independent, as they are to-day. It is none the less true, however, that there is in Europe an old quarrel between two great races, that each of them is represented by a powerful empire, and that these empires cannot forever remain unconcerned about the quarrels of the two races. . . . The chief application of the principle of nationality has been the formation of the Italian and German nations. In former times the existence, in the centre of the Continent, of two objects of greed was a permanent cause of war. Will the substitution of two important states for German anarchy and Italian polyarchy prove a guaranty of future peace?"—E. Lavisse, *General View of the Political History of Europe*, ch. 5, sect. 6-7.

NAUKRARIES. See PHYLÆ.

NAUKRATIS.—"Naukratis was for a long time the privileged port [in Egypt] for Grecian commerce with Egypt. No Greek merchant was permitted to deliver goods in any other part [port], or to enter any other of the mouths of the Nile except the Kanôpic. If forced into any of them by stress of weather, he was compelled to make oath that his arrival was a matter of necessity, and to convey his goods round by sea into the Kanopic branch to Naukratis; and if the weather still forbade such a proceeding, the merchandise was put into barges and conveyed round to Naukratis by the internal canals of the delta. Such a monopoly, which made Naukratis in Egypt something like Canton in China or Nangasaki in Japan, no longer subsisted in the time of Herodotus. . . . At what precise time Naukratis first became licensed for Grecian trade, we cannot directly make out. But there seems reason to believe that it was the port to which the Greek merchants first went, so soon as the general liberty of trading with the country was conceded to them; and this would put the date of such grant at least as far back as the foundation of Kyrene, . . . about 630 B. C., during the reign of Psammetichus. . . . [About a century later, Amasis] sanctioned the constitution of a formal and organised emporium or factory, invested with commercial privileges, and armed with authority exercised by presiding officers regularly chosen. This factory was connected with, and probably grew out of, a large religious edifice and precinct, built at the joint cost of nine Grecian cities: four of them Ionic,—Chios, Teos, Phokæa and Klazomenæ; four Doric,—Rhodes, Knidus, Ialikkarnassus, and Phaselis; and one Æolic,—Mitylene. By these nine cities the joint temple and factory was kept up and its presiding magistrates chosen; but its destination, for the convenience of Grecian commerce generally, seems revealed by the imposing title of The Hellênion."—G. Grote, *Hist. of Greece*, pt. 2, ch. 20.—The site of Naukratis has been determined lately by the excavations of Mr. W. M. Flinders Petrie, begun in 1885, the results of which are appearing in the publications of the "Egypt Exploration Fund." The ruins of the ancient city are found buried under a mound called Nebireh. Its situation was west of the Canobic branch of the Nile, on a canal which connected it with that stream. See EGYPT: B. C. 670-525.

NAULOCBUS, Battle of.—A naval battle fought near Naulochus, on the coast of Sicily, in which Agrippa, commanding for the triumvir Octavius, defeated and destroyed the fleet of Sextus Pompeius, B. C. 36.—C. Merivale, *Hist. of the Romans*, ch. 27.

NAUMACHIÆ.—The naumachiæ of the Romans were structures resembling excavated amphitheatres, but having the large central space filled with water, for the representation of naval combats. "The great Naumachia of Augustus was 1,800 feet long and 1,200 feet broad."—R. Burn, *Rome and the Campagna, introd.*

Origin of the kingdom.—"No historical subject is wrapt in greater obscurity than the origin and early history of the kingdom of Navarre. Whether, during a great portion of the eighth and ninth centuries, the country was independent or tributary; and, if dependent, whether it obeyed the Franks, the Asturians, or the Arabs, or successively all three, are speculations which have long exercised the pens of the peninsular writers. . . . It seems undoubted that, in just dread of the Mohammedan domination, the inhabitants of these regions, as well as those of Catalonia, applied for aid to the renowned emperor of the Franks [Charlemagne]; and that he, in consequence, in 778, poured his legions into Navarre, and seized Pamplona. It seems no less certain that, from this period, he considered the country as a fief of his crown; and that his pretensions, whether founded in violence or in the voluntary submission of the natives, gave the highest umbrage to the Asturian kings: the feudal supremacy thenceforth became an apple of discord between the two courts, each striving to gain the homage of the local governors. . . . Thus things remained until the time of Alfonso III., who . . . endeavoured to secure peace both with Navarre and France by marrying a princess related to both Sancho Iñigo, count of Bigorre, and to the Frank sovereign, and by

consenting that the province should be held as an immovable fief by that count. This Sancho Iñigo, besides his lordship of Bigorre, for which he was the vassal of the French king, had domains in Navarre, and is believed, on apparently good foundation, to have been of Spanish descent. He is said, however, not to have been the first count of Navarre; that his brother Aznar held the fief before him, nominally dependent on king Pepin, but successfully laying the foundation of Navarrese independence. If the chronology which makes Sancho succeed Aznar in 836, and the event itself, be correct, Alfonso only confirmed the count in the lordship. In this case, the only remaining difficulty is to determine whether the fief was held from Charles or Alfonso. . . . But whichever of the princes was acknowledged for the time the lord paramount of the province, there can be little doubt that both governor and people were averse to the sway of either; both had long aspired to independence, and that independence was at hand. The son of this Sancho Iñigo was Garcia, father of Sancho Garces, and the first king of Navarre [assuming the crown about 885–891]; the first, at least, whom . . . historic criticism can admit."—S. A. Dunham, *Hist. of Spain and Portugal*, bk. 3, sect. 2, ch. 2.—See, also, **SPAIN**: A. D. 713–910.

A. D. 1026.—Acquisition of the crown of Castile by King Sancho el Mayor. See **SPAIN**: A. D. 1026–1230.

A. D. 1234.—Succession of Thibault, Count of Champagne, to the throne. See **SPAIN**: A. D. 1212–1238.

A. D. 1284–1328.—Union with France, and separation.—In 1284, the marriage of Jeanne, heiress of the kingdom of Navarre and of the counties of Champagne and Brie, to Philip IV. of France, united the crown of Navarre to that of France. They were separated in 1328, on the death of her last surviving son, Charles IV., without male issue. Philip of Valois secured the French crown, under the so called Salic law, but that of Navarre passed to Jeanne's granddaughter, of her own name.

A. D. 1442–1521.—Usurpation of John II. of Aragon.—The House of Foix and the D'Albrets.—Conquest by Ferdinand.—Incorporation in the kingdom of Castile.—Blanche, daughter of Charles III. of Navarre and heiress of the kingdom, married John II. of Aragon, to whom she gave three children, namely, Don Carlos, or Charles, "who, as heir apparent, bore the title of Prince of Viana, and two daughters, Blanche and Eleanor. Don Carlos is known by his virtues and misfortunes. At the death of his mother Blanche [1442], he should have succeeded to the throne of Navarre; but John II. was by no means disposed to relinquish the title which he had acquired by marriage, and Carlos consented to be his father's vicerey. But even this dignity he was not permitted to enjoy unmolested." Persecuted through life, sometimes imprisoned, sometimes in exile, he died at the age of forty, in 1461 (see **SPAIN**: A. D. 1368–1479).

"By the death of Don Carlos, the succession to the crown of Navarre devolved to his sister Blanche, the divorced wife of Henry IV. of Castile; and that amiable princess now became an object of jealousy not only to her father but also to her younger sister, Eleanor, married to the Count of Foix, to whom John II. had promised the reversion of Navarre after his own

death. Gaston de Foix, the offspring of this union, had married a sister of Louis XI.; and it had been provided in a treaty between that monarch and John II., that in order to secure the succession of the House of Foix to Navarre, Blanche should be delivered into the custody of her sister. John executed this stipulation without remorse. Blanche was conducted to the Castle of Orthès in Bearn (April 1462), where, after a confinement of nearly two years, she was poisoned by order of her sister Eleanor." After committing this crime, the latter waited nearly fifteen years for the crown which it was expected to win, and then enjoyed it but three weeks. Her father reigned until the 20th of January, 1479, when he died; the guilty daughter soon followed him. "After Eleanor's brief reign . . . the blood-stained sceptre of Navarre passed to her grandson Phœbus, 1479, who, however, lived only four years, and was succeeded by his sister Catherine. Ferdinand and Isabella [now occupying the thrones of Aragon and Castile] endeavoured to effect a marriage between Catherine and their own heir; but this scheme was frustrated by Magdalen, the queen-mother, a sister of Louis XI. of France, who brought about a match between her daughter and John d'Albret, a French nobleman who had large possessions on the borders of Navarre (1485). Nevertheless the Kings of Spain supported Catherine and her husband against her uncle, John de Foix, viscount of Narbonne, who pretended to the Navarrese crown on the ground that it was limited to male heirs; and after the death of John, the alliance with Spain was drawn still closer by the avowed purpose of Louis XII. to support his nephew, Gaston de Foix, in the claims of his father. After the fall of that young hero at Ravenna [see ITALY: A. D. 1510-1513], his pretensions to the throne of Navarre devolved to his sister, Germaine de Foix, the second wife of King Ferdinand [see SPAIN: A. D. 1496-1517], an event which entirely altered the relations between the courts of Spain and Navarre. Ferdinand had now an interest in supporting the claims of the house of Foix-Narbonne; and Catherine, who distrusted him, despatched in May 1512, plenipotentiaries to the French court to negotiate a treaty of alliance." But it was too late. Ferdinand had already succeeded in diverting to Navarre an expedition which his son-in-law, Henry VIII. of England, acting in the Holy League against Louis XII., which Ferdinand now joined (see ITALY: A. D. 1510-1513), had sent against Guienne. With this aid he took possession of Upper Navarre. "In the following year, he effected at Orthès a year's truce with Louis XII. (April 1st 1513), by which Louis sacrificed his ally, the King of Navarre, and afterwards, by renewing the truce, allowed Ferdinand permanently to settle himself in his new conquest. The States of Navarre had previously taken the oath of allegiance to Ferdinand as their King, and on the 15th of June 1515, Navarre was incorporated into the kingdom of Castile by the solemn act of the Cortès. The dominions of John d'Albret and Catherine were now reduced to the little territory of Bearn, but they still retained the title of sovereigns of Navarre." Six years later, in 1521, the French invaded Navarre and overran the whole kingdom. "Pampeluna alone, animated by the courage of Ignatius Loyola, made a short resistance. To this siege,

the world owes the Order of the Jesuits. Loyola, whose leg had been shattered by a cannon ball, found consolation and amusement during his convalescence in reading the lives of the saints, and was thus thrown into that state of fanatical exaltation which led him to devote his future life to the service of the Papacy." Attempting to extend their invasion beyond Navarre, the French were defeated at Esquiros and driven back, losing the whole of their conquests.—T. II. Dyer, *Hist. of Modern Europe*, bk. 1, ch. 4 and 7, and bk. 2, ch. 3 (v. 1).

ALSO IN: W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella*, ch. 2 and 23 (v. 1 and 3).

A. D. 1528-1563.—The kingdom remaining on the French side of the Pyrenees.—Jeanne d'Albret's Bourbon marriage and the issue of it.—Establishment of Protestantism in Béarn.—Besides the Spanish province which Ferdinand the Catholic appropriated and joined to Castile, and which gave its name to the kingdom of Navarre, "that kingdom embraced a large tract of country lying on the French side of the Pyrenees, including the principality of Béarn and the counties of Foix, Armagnac, Albret, Bigorre, and Comminges. Catherine de Foix, the heiress of this kingdom, had in 1491 carried it by marriage into the house of D'Albret. Henry, the second king of Navarre belonging to this house, was in 1528 united to Marguerite d'Angoulême, the favourite and devoted sister of Francis I. of France. Pampeluna, the ancient capital of their kingdom, being in the hands of the King of Spain, Henry and Marguerite held their Court at Nérac, the chief town of the duchy belonging to the family of D'Albret. It was at Nérac that Marguerite, herself more than half a Huguenot, opened an asylum to her persecuted fellow-countrymen [see PAPACY: A. D. 1521-1535]. Farel, Calvin, Beza sought temporary refuge and found glad welcome there, while to Lefèvre, Clément Marot, and Gérard Roussel it became a second home. Marguerite died in 1549, leaving only one child, a daughter, who, in the event of her father having no issue by any second marriage, became heiress to the crown of Navarre. Born in 1528, Jeanne d'Albret had early and bitter experience of what heirship to such a crown involved. The Emperor Charles V. was believed to have early fixed his eye on her as a fit consort for Philip, his son and successor." To prevent this marriage, she was shut up for years, by her uncle, the French king, Francis I., in the gloomy castle of Plessis-les-Tours. When she was twelve years old he affianced her to the Duke of Cleves, notwithstanding her vigorous protests; but the alliance was subsequently broken off. "The next hand offered to Jeanne, and which she accepted, was that of Antoine, elder brother of the Prince of Condé, and head of the Bourbon family. They were married in 1548, a year after the death of Francis I., and a year before that of his sister Marguerite, Jeanne's mother. The marriage was an unfortunate one. Ambitious, yet weak and vain; frivolous and vacillating, yet headstrong and impetuous, faithless to his wife, faithless to his principles, faithless to his party, Antoine became the butt and victim of the policy of the Court. But though unfortunate in so many respects, this marriage gave to France, if not the greatest, the most fortunate, the most popular, the most beloved of all her

monarchs"—namely, Henry IV.—Henry of Navarre—the first of the Bourbon dynasty of French kings. "Antoine of Navarre died at the siege of Rouen in 1562. The first use that the Queen made of the increased measure of freedom she thus acquired was to publish an edict establishing the Protestant and interdicting the exercise of the Roman Catholic worship in Béarn. So bold an act by so weak a sovereign—by one whose political position was so perilous and insecure—drew down upon her the instant and severe displeasure of the Pope," who issued against her a Bull of excommunication, in October, 1563, and assumed the right to dispose of her kingdom. This assumption was more than the French Court could permit. "The Pope had to give way, and the Bull was expunged from the ecclesiastical ordinances of the Pontificate."—W. Hanna, *The Wars of the Huguenots*, ch. 4.

NAVIGATION LAWS: A. D. 1651.—The first English Act.—"After the triumph of the parliamentary cause [in the English Civil War], great numbers of the royalists had sought refuge in Virginia, Barbadoes, and the other West India settlements; so that the white population of these dependencies was in general fiercely opposed to the new government, and they might be said to be in a state of rebellion after all the rest of the empire had been reduced to submission and quiet. Barbadoes, indeed, had actually received Lord Willoughby as governor under a commission from Charles II., then in Holland, and had proclaimed Charles as king. It was in these circumstances that the English parliament in 1651, with the view of punishing at once the people of the colonies and the Dutch, who had hitherto enjoyed the greater part of the carrying-trade between the West Indies and Europe, passed their famous Navigation Act, declaring that no merchandise either of Asia, Africa, or America, except only such as should be imported directly from the place of its growth or manufacture in Europe, should be imported into England, Ireland, or any of the plantations, in any but English-built ships, belonging either to English or English-plantation subjects, navigated by English commanders, and having at least three-fourths of the sailors Englishmen. It was also further enacted that no goods of the growth, production, or manufacture of any country in Europe should be imported into Great Britain except in British ships, or in such ships as were the real property of the people of the country or place in which the goods were produced, or from which they could only be, or most usually were, exported. Upon this law, which was re-enacted after the Restoration, and which down to our own day has been generally regarded and upheld

as the palladium of our commerce, and the maritime Magna Charta of England, we shall only at present observe that one of its first consequences was undoubtedly the war with Holland which broke out the year after it was passed."—G. L. Craik, *Hist. of British Commerce*, ch. 7 (v. 2).

A. D. 1660-1672.—Effect upon the American colonies, and their relation to Great Britain. See UNITED STATES OF AM.: A. D. 1651-1672.

A. D. 1849.—Complete repeal of the British restrictive Acts.—"The question of the navigation laws was . . . brought forward [in the British Parliament, at the commencement of the session of 1849] . . . with a fair prospect of being settled." The stringency of the original act of 1651 had been "slightly mitigated by another act passed in the reign of Charles II.; but the modifications thus introduced were of slight importance. A farther relaxation, made at the conclusion of the war of independence, allowed the produce of the United States to be imported in ships belonging to citizens of those states. The last amendment of the original law was obtained in the year 1825 by Mr. Huskisson, who made some important changes in it. The law, then, which the legislature had to reconsider in the year 1849 stood thus: the produce of Asia, Africa, and America might be imported from places out of Europe into the United Kingdom, if to be used therein, in foreign as well as in British ships, provided that such ships were the ships of the country of which the goods were the produce, and from which they were imported. Goods which were the produce of Europe, and which were not enumerated in the act, might be brought thence in the ships of any country. Goods sent to or from the United Kingdom to any of its possessions, or from one colony to another, must be carried in British ships, or in ships of the country in which they were produced and from which they were imported. Then followed some stringent definitions of the conditions which constituted a vessel a British ship in the sense of the act. These restrictions were not without their defenders. Even the great founder of economic science, Adam Smith, while admitting that the navigation laws were inconsistent with that perfect freedom of trade which he contended for, sanctioned their continuance on the ground that defence is much more important than opulence. But as it was more and more strongly felt that these laws were part and parcel of that baneful system of monopoly which, under the name of protection, had so long been maintained and was now so completely exploded, it began also to be seriously doubted whether they were necessary to the defence of the nation. . . . Therefore, on the 14th of February in this year, Mr. Labouchere, as president of the board of trade, proposed a resolution on the subject couched in the following terms: 'That it is expedient to remove the restrictions which prevent the free carriage of goods by sea to and from the United Kingdom and the British possessions abroad, and to amend the laws regulating the coasting trade of the United Kingdom, subject nevertheless to such control by her Majesty in council as may be necessary; and also to amend the laws for the registration of ships and seamen.' A long debate took place on the

question of the second reading of the government measure. . . . 214 members followed Mr. Disraeli into the lobby, while 275 voted with the government, which therefore had a majority of 61. In the upper house Lord Brougham astonished friend and foe by coming forward as the strenuous and uncompromising opponent of the ministerial measure. . . . The second reading was carried by a majority of 10. The smallness of this majority caused some anxiety to the supporters of the measure with regard to its ultimate fate; but this anxiety was relieved by the withdrawal of the most conspicuous opponents of the bill."—W. N. Molesworth, *Hist. of Eng.*, 1830–1874, v. 2, ch. 5.

Forty-nine of the former were disabled or captured. "This was the first great victory . . . which the Athenians had gained at sea since the Peloponnesian war."—G. Grote, *Hist. of Greece*, pt. 2, ch. 77.

A. D. 1204–1567.—The mediæval dukedom.—"In the partition of the [Byzantine] empire [after the conquest of Constantinople, in 1204, by the Crusaders and the Venetians], the twelve islands of the Archipelago, which had formed the theme of the Egean sea in the provincial division of the Byzantine empire, fell to the share of the crusading barons; but Mark Sanudo, one of the most influential of the Venetian nobles in the expedition, obtained possession of the principal part of the ancient theme—though whether by purchase from the Frank barons to whom it had been allotted, or by grant to himself from the emperor, is not known. Sanudo, however, made his appearance at the parliament of Ravenika as one of the great feudatories of the empire of Romania, and was invested by the emperor Henry with the title of Duke of the Archipelago, or Naxos. It is difficult to say on what precise footing Sanudo placed his relations with the republic. His conduct in the war of Crete shows that he ventured to act as a baron of Romania, or an independent prince, when he thought his personal interests at variance with his born allegiance to Venice. . . . The new duke and his successors were compelled by their position to acknowledge themselves, in some degree, vassals both of the empire of Romania and of the republic of Venice; yet they acted as sovereign princes." Nearly at the close of the fourteenth century the dukedom passed from the Sanudo family to the Crispo family, who reigned under the protection of Venice until 1537, when the Duke of Naxos was reduced to vassalage by the Turkish sultan Suleiman. Thirty years later, his title and authority were extinguished by the

sultan, on the petition of the Greek inhabitants, who could not endure his oppressive and disgraceful government.—G. Finlay, *Hist. of Greece from its Conquest by the Crusaders*, ch. 10, sect. 1–3.

ALSO IN: W. B. Dawkins, *Cave Hunting*, p. 240.

NEAPOLIS, Schools of.—In the first century of the Roman empire, "Neapolis [modern Naples] had its schools and colleges, as well as Athens; its society abounded in artists and men of letters, and it enjoyed among the Romans the title of the learned, which comprehended in their view the praise of elegance as well as knowledge."—C. Merivale, *Hist. of the Romans*, ch. 40.

NEAPOLIS AND PALÆPOLIS.—"Palæopolis is mentioned only by Livy: it was an ancient Cumæan colony, the Cumæans having taken refuge there across the sea. Neapolis derives its name from being a much later settlement of different Greek tribes, and was perhaps not founded till Olymp. 91, about the time of the Athenian expedition to Sicily, and as a fortress of the Greeks against the Sabellians. It is not impossible that the Athenians also may have had a share in it. Both towns, however, were of Chalcidian origin and formed one united state, which at that time may have been in possession of Ischia. Many absurdities have been written about the site of Palæopolis, and most of all by Italian antiquaries. We have no data to go upon except the two statements in Livy, that Palæopolis was situated by the side of Neapolis, and that the Romans [in the second Samnite war] had pitched their camp between the two towns. The ancient Neapolis was undoubtedly situated in the centre of the modern city of Naples above the church of Sta. Rosa; the coast is now considerably advanced. People have sought for Palæopolis likewise within the compass of the modern city. . . . I alone should never have discovered its true site, but my friend, the Count de Serre, a French statesman, who in his early life had been in the army and had thus acquired a quick and certain military eye, discovered it in a walk which I took with him. The town was situated on the outer side of Mount Posilipo, where the quarantine now is."—B. G. Niebuhr, *Lects. on the Hist. of Rome*, lect. 40 (v. 1).—"Parthenopé was an ancient Greek colony founded by the Chalcidians of Cuma on the northern part of the Bay of Naples. In after years another city sprung up a little to the south, whence the original Parthenopé was called Palæopolis or Old-town, while the new town took the name of Neapolis. The latter preserves its name in the modern Naples." Palæopolis was taken by the Romans, B. C. 327, at the beginning of the second Samnite War, and is heard of no more. Neapolis made peace with them and

lived.—H. G. Liddell, *Hist. of Rome*, bk. 3, ch. 21 (v. 1).

NEMEDIANS, The.—It is among the legends of the Irish that their island was settled, about the time of the patriarch Jacob, by a colony of descendants from Japhet, led by one

Nemedius, from whom they and their posterity took the name of Nemedians. The Nemedians were afterwards subjugated by a host of African sea-rovers, known as Fomorians, but were delivered from these in time by a fresh colony of their kindred from the East called the Fir Bolgs.—T. Wright, *Hist. of Ireland*, bk. 1, ch. 2.

NEMEAN AND ISTHMIAN GAMES.—"The Nemean and Isthmian [games in ancient Greece] were celebrated each twice in every Olympiad, at different seasons of the year: the former in the plain of Nemea, in Argolis, under the presidency of Argos; the latter in the Corinthian isthmus, under the presidency of Corinth. These, like the Pythian and Olympic games, claimed a very high antiquity, though the form in which they were finally established was of late institution; and it is highly probable that they were really suggested by the tradition of ancient festivals, which had served to cement an Amphictyonic confederacy."—C. Thirlwall, *Hist. of Greece*, ch. 10.

NEOPLATONICS, The.—"There now [in the third century after Christ] arose another school, which from its first beginnings announced itself as a reform and support of the ancient faith, and, consequently, as an enemy of the new religion. This was the Neoplatonic school of Alexandria, founded by Ammonius Saccas and Plotinus, and which was afterwards represented by Porphyrius, Amelius, and Iamblicus. The doctrine of this school was the last, and in many respects the best production of paganism, now in its final struggle; the effort of a society, which acknowledged its own defects, to regenerate and to purify itself. Philosophy, and the religion of the vulgar, hitherto separated and irreconcilable, joined in harmony together for mutual support, and for a new existence. The Neoplatonics endeavoured, therefore, to unite the different systems of philosophy, especially the Pythagorean, Platonic, and Aristotelean, in one body with the principles of Oriental learning, and thus to raise an edifice of universal, absolute truth. In the same manner they represented the varied forms of eastern and western religious worship as one entire whole, which had manifested itself indeed in different ways, but at the foundation of which there lay the same true faith. They taught that 'every kind of homage and adoration, which men offer to superior beings, is referred to heroes, demons, or Gods, but, finally, to the one most-high God, the author of all: that these demons are the chiefs and genii of the different parts, elements, and powers of the world, of people, countries, and cities, to obtain whose favour and protection, it behoved men to honour them according to the rites and customs of the ancients.' It is, therefore, manifest that these philosophers were essentially hostile to the Christian religion,—the exclusive character of which, and tendency to destroy all other religions, stood in direct contrast with their

doctrines: and as their school was in its vigour at the very time in which Christianity made its most rapid advances, and had struck Paganism with a mortal wound, they employed themselves especially, and more earnestly, than other philosophers, to maintain their own tenets, and to destroy Christianity. They in nowise, however, desired to defend heathenism, or its worship, in their then degenerate and degrading state: their ideal was a more pure, more noble, spiritualized, polytheism, to establish which was the object which they had proposed to themselves. Whilst, therefore, on the one hand, they preserved the ancient and genuine truths which had sprung from primitive tradition, and purified them from recent errors and deformations; on the other, they adopted many of the doctrines of the hated Christianity, and sought to reform paganism by the aid of light which had streamed upon them from the sanctuary of the Church. This admission and employment of Christian truths are easily explained, if it be true, that two of their chiefs, Ammonius and Porphyrius, had been Christians. It is well known that they received instructions from Christian masters. . . . This uniformity, or imitation, consists not only in the use of terms, but in essential dogmas. The Neoplatonic idea of three hypostases in one Godhead would not have been heard of, if the Christian doctrine of the Trinity had not preceded it. . . . Their doctrines respecting the minor Gods, their influence and connexion with the supreme Being, approached near to the Christian dogma of the angels. Nor is the influence of Christianity less evident in the pure and grave morality of the Neoplatonics: in their lessons which teach the purifying of fallen souls, the detachment from the senses, the crucifying . . . of the affections and passions, it is easy to distinguish the Christian, from the commingled pagan, elements. The Neoplatonics endeavoured to reform polytheism by giving to men a doctrine more pure concerning the Gods, by attributing an allegorical sense to the fables, and a moral signification to the forms and ceremonies of religion: they sought to raise the souls of men to piety, and rejected from their mythology many of the degrading narrations with which it had before abounded. It was their desire also to abolish the sacrifices, for the Gods could only abhor the slaughter, the dismemberment and the burning of animals. But at the same time they reduced to a theory the apparitions of the Gods; they declared magic to be the most divine of sciences; they taught and defended theurgy, or the art of invoking the Gods (those of an inferior order, who were united to matter), and of compelling them to comply with the desires of men."—J. NESTORIAN AND MONOPHYSITE CONTROVERSY.—The great religious controversy of the Christian world in the fourth century, relating to the mystery of the Trinity, having been settled by the triumph of the doctrine of Athanasius over the doctrine of Arius, it was succeeded in the fifth century by a still more violent disputation, which concerned the yet profounder mystery of the Incarnation. To the dogmatists of one party it was wickedness to distinguish the divine nature and the human nature which they believed to be united in Christ; to the dogmatists of the other side it was sin to confound them. Cyril of Alexandria became the implacable leader of the first party. Nestorius, Patriarch of Constantinople, was forced to the front of the battle on the other side and became its martyr. The opponents of Nestorius gained advantages in the contest from the then rapidly growing tendency in the Christian world to pay divine honors to the Virgin Mary as the Mother of God. To Nestorius and those who believed with him, this was abhorrent. "Like can but bear like," said Nestorius in one of his sermons; "a human mother can only bear a human being. God was not born—he dwelt in that which was born." But the mob was too easily charmed with Mariolatry to be moved by reasoning on the subject, and Cyril led the mob, not only in Alexandria, where it murdered Hypatia and massacred Jews at his bidding, but generally throughout the Christian world. A Council called at Ephesus in 431 and recognized as the third Œcumenical Council, condemned Nestorius and degraded him from his episcopal throne; but a minority disputed its procedure and organized a rival Council, which retorted anathemas and excommunications against Cyril and his friends. The emperor at last interfered and dissolved both; but Nestorius, four years later, was exiled to the Libyan desert and persecuted remorselessly until he died. Meantime the doctrine of Cyril had been carried to another stage of development by one of his most ardent supporters, the Egyptian monk Eutyches, who maintained that the human nature of Christ was absorbed in the divine nature. Both forms of the doctrine of one nature in the Son of God seem to have acquired somewhat confusedly the name of Monophysite, though the latter tenet is more often called Eutychian, from the name of its chief promulgator. It kindled new fires in the controversy. In 449, a second Council at

Ephesus, which is called the "Robber Synod" on account of the peculiar violence and indecency of its proceedings, sustained the Monophysites. But two years later, in 451, the vanquished party, supported by Pope Leo the Great, at Rome, succeeded in assembling a Council at Chalcedon which laid down a definition of the Christian faith affirming the existence of two natures in one person, and which nevertheless condemned Nestorianism and Monophysitism, alike. Their success only inflamed the passions of the worshippers of the Virgin as the "Mother of God." "Everywhere monks were at the head of the religious revolution which threw off the yoke of the Council of Chalcedon." In Jerusalem "the very scenes of the Saviour's mercies ran with blood shed in his name by his ferocious self-called disciples." At Alexandria, a bishop was murdered in the baptistery of his church. At Constantinople, for sixty years, there went on a succession of bloody tumults and fierce revolutionary conspiracies which continually shook the imperial throne and disorganized every part of society, all turning upon the theological question of one nature or two in the incarnate Son of God. The Emperor Zeno "after a vain attempt to obtain the opinions of the chief ecclesiastical dignitaries, without assembling a new Council, a measure which experience had shown to exasperate rather than appease the strife, Zeno issued his famous Henoticon, or Edict of Union. . . . It aimed not at the reconciliation of the conflicting opinions, but hoped, by avoiding all expressions offensive to either party, to allow them to meet together in Christian unity." The Henoticon only multiplied the factions in number and heated the strife between them. The successor of Zeno, Anastasius, became a partisan in the fray, and through much of his reign of twenty-seven years the conflict raged more fiercely than ever. Constantinople was twice, at least, in insurrection. "The blue and green factions of the Circus—such is the language of the times—gave place to these more maddening conflicts. The hymn of the Angels in Heaven [the Trisagion] was the battle-cry on earth." At length the death of Anastasius ended the strife. His successor Justin (A. D. 518), bowed to the authority of the Bishop of Rome—the Pope Hormisdas—and invoked his aid. The Eastern world, exhausted, followed generally the emperor's example in taking the orthodoxy of Rome for the orthodoxy of Christianity. Nestorianism and Monophysitism in their extreme forms were driven from the open field in the Christian world, but both survived and have transmitted their remains to the present day.—H. H. Milman, *Hist. of Latin Christianity*, bk. 2, ch. 3-4, bk. 3, ch. 1, and ch. 3.

ALSO IN: E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 47.—J. Alzog, *Universal Church History*, 2d epoch, ch. 2.—See, also, NESTORIANS; JACOBITE CHURCH; and MONOTHELITE CONTROVERSY.

NESTORIANS, The.—"Within the limits of the Roman empire . . . this sect was rapidly extirpated by persecution [see above, NESTORIAN AND MONOPHYSITE CONTROVERSY]; and even in the patriarchate of Antioch, where, as we have seen, the tenets of Nestorius at first found greatest favour, it had disappeared as early as the time of Justinian [A. D. 527-565]. But another field lay open to it in the Persian kingdom of the Sas-

sanidæ, and in this it ultimately struck its roots deeply. The Chaldean church, which at the beginning of the fifth century was in a flourishing condition, had been founded by missionaries from Syria; its primate, or Catholicos, was dependent on the patriarch of Antioch, and in respect of language and discipline it was closely connected with the Syrian church. It is not surprising, therefore, to find that some of its members lent a ready ear to the Nestorian doctrines. This was especially the case with the church-teachers of the famous seminary at Edessa in Mesopotamia. . . . One of their number, Barsumas, who was bishop of the city of Nisibis from 435 to 489, by his long and active labours contributed most of all to the establishment of the Nestorian church in Persia. He persuaded the king Pherozes (Firuz) that the antagonism of his own sect to the doctrine of the established church of the Roman empire would prove a safeguard for Persia. . . . From that time Nestorianism became the only form of Christianity tolerated in Persia. . . . The Catholicos of Chaldeæ now threw off his dependence on Antioch, and assumed the title of Patriarch of Babylon. The school of Edessa, which in 489 was again broken up by the Greek emperor, Zeno, was transferred to Nisibis, and in that place continued for several centuries to be an important centre of theological learning, and especially of biblical studies. . . . In the sixth century the Nestorians had established churches from the Persian Gulf to the Caspian Sea, and had preached the Gospel to the Medes, the Bactrians, the Huns, and the Indians, and as far as the coast of Malabar and the island of Ceylon. At a later period, starting from Balk and Samarcand, they spread Christianity among the nomad Tartar tribes in the remote valleys of the Imaus; and the inscription of Sigānfu, which was discovered in China, and the genuineness of which is considered to be above suspicion, describes the fortunes of the Nestorian church in that country from the first mission, A. D. 636, to the year in which that monument was set up, A. D. 781. In the ninth century, during the rule of the caliphs at Bagdad, the patriarch removed to that city, and at this period twenty-five metropolitans were subject to him. . . . From the eleventh century onwards the prosperity of the Chaldean church declined, owing to the terrible persecutions to which its members were exposed. Foremost among these was the attack of Timour the Tartar, who almost exterminated them. Within the present century their diminished numbers have been still further thinned by frightful massacres inflicted by the Kurds. Their headquarters now are a remote and rugged valley in the mountains of Kurdistan, on the banks of the Greater Zab. . . . Beyond the boundary which separates Turkey from Persia to the southward of Mount Ararat, a similar community is settled on the shores of Lake Urumia. A still larger colony is found at Mosul, and others . . . elsewhere in the neighbourhood of the Tigris. . . . Of their widely extended missions only one fragment now remains, in the Christians of St. Thomas on the Malabar coast of India."—H. F. Tozer, *The Church and the Eastern Empire*, ch. 5.

NETAD, Battle of. See HUNS: A. D. 453.

NETHERLANDS.

The Land.—"The north-western corner of the vast plain which extends from the German ocean to the Ural mountains is occupied by the countries called the Netherlands [Low Countries]. This small triangle, enclosed between France, Germany, and the sea, is divided by the modern kingdoms of Belgium and Holland into two nearly equal portions. . . . Geographically and ethnographically, the Low Countries belong both to Gaul and to Germany. It is even doubtful to which of the two the Batavian island, which is the core of the whole country, was reckoned by the Romans. It is, however, most probable that all the land, with the exception of Friesland, was considered a part of Gaul. Three great rivers—the Rhine, the Meuse, and the Scheld—had deposited their slime for ages among the dunes and sandbanks heaved up by the ocean around their mouths. A delta was thus formed, habitable at last for man. It was by nature a wide morass, in which oozy islands and savage forests were interspersed among lagoons and shallows; a district lying partly below the level of the ocean at its higher tides, subject to constant overflow from the rivers, and to frequent and terrible inundations by the sea. . . . Here, within a half-submerged territory, a race of wretched ichthyophagi dwelt upon 'terpen,' or mounds, which they had raised, like beavers, above the almost fluid soil. Here, at a later day, the same race chained the tyrant Ocean and his mighty streams into subserviency, forcing them to fertilize, to render commodious, to cover with a beneficent network of veins and arteries, and to bind by watery highways with the farthest ends of the world, a country disinherited by nature of its rights. A region, outcast of ocean and earth, wrested at last from both domains their richest treasures. A race, engaged for generations in stubborn conflict with the angry elements, was unconsciously educating itself for its great struggle with the still more savage despotism of man. The whole territory of the Netherlands was girt with forests. An extensive belt of woodland skirted the sea-coast, reaching beyond the mouths of the Rhine. Along the outer edge of this barrier, the dunes cast up by the sea were prevented by the close tangle of thickets from drifting further inward, and thus formed a breastwork which time and art were to strengthen. The groves of Haarlem and the Hague are relics of this ancient forest. The Badahuenna wood, horrid with Druidic sacrifices, extended along the eastern line of the vanished lake of Flevo. The vast Hercynian forest, nine days' journey in breadth, closed in the country on the German side, stretching from the banks of the Rhine to the remote regions of the Dacians, in such vague immensity (says the conqueror of the whole country) that no German, after traveling sixty days, had ever reached, or even heard of, its commencement. On the south, the famous groves of Ardennes, haunted by faun and satyr, embowered the country, and separated it from Celtic Gaul. Thus inundated by mighty rivers, quaking beneath the level of the ocean, belted about by hirsute forests, this low land, nether land, hollow land, or Holland, seemed hardly deserving the arms of the all-accomplished Roman."—J. L. Motley, *The Rise of the Dutch Republic*, introd., sect. 1.

(Flanders): A. D. 863-1383.—The Flemish towns and counts. See *FLANDERS*.

(Holland): A. D. 922-1345.—The early Counts of Holland.—"It was in the year 922 that Charles the Simple [of France] presented to Count Dirk the territory of Holland, by letters patent. This narrow hook of land, destined, in future ages, to be the cradle of a considerable empire, stretching through both hemispheres, was, thenceforth, the inheritance of Dirk's descendants. Historically, therefore, he is Dirk I., Count of Holland. . . . From the time of the first Dirk to the close of the 13th century there were nearly four hundred years of unbroken male descent, a long line of Dirks and Florences. This iron-handed, hot-headed, adventurous race, placed as sovereign upon its little sandy hook, making ferocious exertions to swell into large consequence, conquering a mile or two of morass or barren furze, after harder blows and bloodier encounters than might have established an empire under more favorable circumstances, at last dies out. The countship falls to the house of Avennes, Counts of Hainault. Holland, together with Zealand, which it had annexed, is thus joined to the province of Hainault. At the end of another half century the Hainault line expires. William the Fourth died childless in 1355 [1345?]."—J. L. Motley, *Rise of the Dutch Republic*, introd., sect. 5-6.

A. D. 13-15th Centuries.—Relations with the Hanseatic League. See *HANSA TOWNS*.

(Holland): A. D. 1345-1354.—The Rise of the Hooks and the Kabeljauws, or Cods.—"On the death of William IV. [Count of Holland] without issue in 1345, his sister, married to the Emperor Louis, became Countess of Zealand, Holland, Friesland and Hainault. But her husband dying soon afterwards, many of the noblesse, whom she had offended by the attempt to restrain their excesses, instigated her son to assume the sovereignty. In the sanguinary struggle which ensued, the people generally adhered to the cause of Margaret." They "looked forward to the necessities of a female reign as likely to afford them opportunities to win further immunities, as the condition of their support against the turbulent nobles. Did not these live, like the great fish, by devouring the smaller ones? And how could they be checked but by the hooks which, though insignificant in appearance, when aptly used would be too strong for them. Such was the talk of the people; and from these household words arose the memorable epithets, which in after years were heard in every civic brawl, and above the din and death-cry of many a battle-field. Certain of the nobles adhered to the cause of the Hooks, while some of the cities, among which were Delft, Haarlem, Dort, and Rotterdam, supported the Kabeljauws [or Cods]. The community was divided into parties rather

than into classes. . . . In the exasperation of mutual injury, the primary cause of quarrel was soon forgotten. The Hooks were proud of the accession of a lord to their ranks; and the Kabeljauws were equally glad of the valuable aid which a wealthy and populous town was able to afford. The majority of the cities,—perhaps the majority of the inhabitants in all of them,—favoured the Hook party, as the preponderance of the landowners lay in the opposite scale. But no adherence to antagonistic principles, or even a systematic profession of them, is traceable throughout the varying struggle. . . . In Friesland the two factions were designated by the recriminative epithets of 'Vet-Koopers' and 'Schieringers,'—terms hardly translatable. In the conflict which first marshalled the two parties in hostile array, the Hooks were utterly defeated;—their leaders who survived were banished, their property confiscated, and their dwellings razed to the ground. Margaret was forced to take refuge in England, where she remained until a short time previous to her death in 1354, when the four provinces acknowledged William V. as their undisputed lord. The succeeding reigns are chiefly characterised by the incessant struggles of the embittered factions. . . . Whatever progress was made during the latter half of the 14th century was municipal and commercial. In a national view the government was helpless and inefficient, entangled by ambitious family alliances with France, England, and Germany, and distracted by the rival powers and pretensions of domestic factions. Under the administration of the ill-fated Jacoba [or Jacqueline] these evils reached their full maturity."—W. T. McCullagh, *Industrial Hist. of Free Nations*, ch. 9 (v. 2).

14-15th Centuries.—Commercial and industrial superiority.—Advance in learning and art.—"What a scene as compared with the rest of Northern Europe, and especially with England . . . must have been presented by the Low Countries during the 14th century! In 1370, there are 3,200 woollen-factories at Malines and on its territory. One of its merchants carries on an immense trade with Damascus and Alexandria. Another, of Valenciennes, being at Paris during a fair, buys up all the provisions exposed for sale in order to display his wealth. Ghent, in 1340, contains 40,000 weavers. In 1389, it has 189,000 men bearing arms; the drapers alone furnish 18,000 in a revolt. In 1390, the goldsmiths of Bruges are numerous enough to form in war time an entire division of the army. At a repast given by one of the Counts of Flanders to the Flemish magistrates, the seats provided for the guests being unfurnished with cushions, they quietly folded up their sumptuous cloaks, richly embroidered and trimmed with fur, and placed them on the wooden benches. When leaving the table at the conclusion of the feast, a courtier called their attention to the fact that they were going without their cloaks. The burgomaster of Bruges replied: 'We Flemings are not in the habit of carrying away the cushions after dinner.' . . . Commynes, the French chronicler, writing in the 15th century, says that the traveller, leaving France and crossing the frontiers of Flanders, compared himself to the Israelites when they had quitted the desert and entered the borders of the Promised Land. Philip the Good kept up a court which surpassed every other in Europe for luxury and magnificence. . . . In all such mat-

ters of luxury and display, England of the 16th or 17th century had nothing to compare with the Netherlands a hundred or even two hundred years before. After luxury, come comfort, intelligence, morality, and learning, which develop under very different conditions. In the course of time even Italy was outstripped in the commercial race. The conquest of Egypt by the Turks, and the discovery of a water passage to the Indies, broke up the overland trade with the East, and destroyed the Italian and German cities which had flourished on it. . . . Passing from the dominion of the House of Burgundy to that of the House of Austria, which also numbered Spain among its vast possessions, proved to them in the end an event fraught with momentous evil. Still for a time, and from a mere material point of view, it was an evil not unmixt with good. The Netherlands were better sailors and keener merchants than the Spaniards, and, being under the same rulers, gained substantial advantages from the close connection. The new commerce of Portugal also filled their coffers; so that while Italy and Germany were impoverished, they became wealthier and more prosperous than ever. . . . With wealth pouring in from all quarters, art naturally followed in the wake of commerce. Architecture was first developed, and nowhere was its cultivation more general than in the Netherlands."—D. Campbell, *The Puritan in Holland*, &c., ch. 1. See **TRADE, MEDIEVAL**.

(Holland and Hainault): A. D. 1417-1430.—The despoiling of Countess Jacqueline.—In 1417, Count William VI. of Holland, Hainault and Friesland, died, leaving no male heirs, but a daughter, Jacoba, or Jacqueline, whom most of the nobles and towns of the several states had already acknowledged as the heiress of her father's sovereignty. Though barely seventeen years of age, the countess Jake, as she was sometimes called, wore a widow's weeds. She had been married two years before to John, the second son of the king of France, who became presently thereafter, by his brother's death, the dauphin of France. John had died, a few months before Count William's death, and the young countess, fair in person and well endowed in mind, was left with no male support, to contend with the rapacity of an unscrupulous bishop-uncle (John, called The Godless, Bishop of Liège), who strove to rob her of her heritage. "Henry V. [of England] had then stood her friend, brought about a reconciliation, established her rights and proposed a marriage between her and his brother John, Duke of Bedford, who was then a fine young man of five or six and twenty. . . . But she was a high-spirited, wilful damsel, and preferred her first cousin, the Duke of Brabant, whose father was a brother of Jean Sans Peur [Duke of Burgundy]. . . . The young Duke was only sixteen, and was a weak-minded, passionate youth. Sharp quarrels took place between the young pair; the Duchess was violent and headstrong, and accused her husband of allowing himself to be governed by favourites of low degree. The Duke of Burgundy interfered in vain. . . . After three years of quarrelling, in the July of 1421 Jacqueline rode out early one morning, met a knight of Hainault called Escaillon, 'who had long been an Englishman at heart,' and who brought her sixty horsemen, and galloped off for Calais, whence she came to England, where Henry received her

with the courtesy due to a distressed dame-errant, and she became a most intimate companion of the Queen. . . . She loudly gave out that she intended to obtain a separation from her husband on the plea of consanguinity, although a dispensation had been granted by the Council of Constance, and 'that she would marry some one who would pay her the respect due to her rank.' This person soon presented himself in the shape of Humfrey, duke of Gloucester, the King's youngest brother, handsome, graceful, accomplished, but far less patient and conscientious than any of his three elders." Benedict XIII., the anti-pope, was persuaded to pronounce the marriage of Jaqueline and John of Brabant null and void; "but Henry V. knew that this was a vain sentence, and intimated to his brother that he would never consent to his espousing the Duchess of Brabant; showing him that the wedlock could not be legal, and that to claim the lady's inheritance would lead to a certain rupture with the Duke of Burgundy, who could not but uphold the cause of his cousin of Brabant." Notwithstanding these remonstrances, the Duke Humfrey did marry the seductive Jaqueline, early in 1424. "He then sent to demand from the Duke of Brabant the possession of the lady's inheritance; and on his refusal the Hainaulters espoused whichever party they preferred and began a warfare among themselves." Soon afterwards the godless bishop of Liège died and "bequeathed the rights he pretended to have to Hainault, not to his niece, but to the Duke of Burgundy. Gloucester in the meantime invaded Hainault and carried on a 'bitter war there.' Burgundy assembled men-at-arms for its protection; and letters passed between the Dukes, ending in a challenge—not between Jaqueline's two husbands, who would have seemed the fittest persons to have fought out the quarrel, but between Gloucester and Burgundy." It was arranged that the question of the possession of Hainault should be decided by single combat. Humfrey returned to England to make preparations, leaving Jaqueline at Mons, with her mother. The latter proved false and allowed the citizens of Mons to deliver up the unhappy lady to Philip of Burgundy. Her English husband found himself powerless to render her much aid, and was possibly indifferent to her fate, since another woman had caught his fancy. Jaqueline, after a time, escaped from her captivity, and revived the war in Hainault, Gloucester sending her 500 men. "The Duke of Brabant died, and reports reached her that Gloucester had married Eleanor Cobham; but she continued to battle for her county till 1428, when she finally came to terms with Philippe [of Burgundy], let him garrison her fortresses, appointed him her heir, and promised not to marry without his consent. A year or two after, however, she married a gentleman of Holland called Frank of Burslem, upon which he was seized by the Burgundians. To purchase his liberty she yielded all her dominions, and only received an annual pension until 1436, when she died, having brought about as much strife and dissension as any woman of her time."—C. M. Yonge, *Cameos of Eng. Hist.*, series 2, c. 33.

A. D. 1428-1430.—The sovereignty of the House of Burgundy established.—"Upon the surrender of Holland, Zealand, Friesland, and Hainault by Jacoba, Philip [the duke of Burgundy called Philip the Good] became possessed of the most considerable states of the Netherlands. John, duke of Burgundy, his father, had succeeded to Flanders and Artois, in right of his mother Margaret, sole heiress of Louis van der Male, count of Flanders. In the year 1429, Philip entered into possession of the county of Namur, by the death of Theodore, its last native prince, without issue, of whom he had purchased it during his lifetime for 132,000 crowns of gold. To Namur was added in the next year the neighbouring duchy of Brabant, by the death [A. D. 1430] of Philip (brother of John, who married Jacoba of Holland), without issue; although Margaret, countess-dowager of Holland, aunt of the late duke, stood the next in succession, since the right extended to females, Philip prevailed with the states of Brabant to confer on him, as the true heir, that duchy and Limburg, to which the Margraviate of Antwerp and the lordship of Mechlin were annexed. . . . The accession of a powerful and ambitious prince to the government of the county was anything but a source of advantage to the Dutch, excepting, perhaps, in a commercial point of view."—C. M. Davies, *Hist. of Holland*, pt. 2, ch. 1 (p. 1).

A. D. 1477.—The severance from Burgundy.—Accession of the Duchess Mary.—The grant of the "Great Privilege."—On the fifth of January, 1477, Charles the Bold of Burgundy came to his end at Nancy, and Louis XI. of France laid prompt and sure hands on the Burgundian duchy, which remained thenceforth united to the French crown. It was the further intention of Louis to secure more or less of the Netherland domain of the late duke, and he began seizures to that end. But the Netherland states much preferred to acknowledge the sovereignty of the young duchess Mary, daughter and sole heiress of Charles the Bold, provided she would make proper terms with them. "Shortly after her accession, the nobles, to whose guardianship she had been committed by Charles before his departure, summoned a general assembly of the states of the Netherlands at Ghent, to devise means for arresting the enterprises of Louis, and for raising funds to support the war with France, as well as to consider the state of affairs in the provinces. . . . This is the first regular assembly of the states-general of the Netherlands. . . . Charles, and his father, Philip, had exercised in the Netherlands a species of government far more arbitrary than the inhabitants had until then been accustomed to. . . . It now appeared that a favourable opportunity offered itself for rectifying these abuses; and the assembly, therefore, made the consideration of them a preliminary to the grant of any supplies for the war. . . . They insisted so firmly on this resolution that Mary, finding they were determined to refuse any subsidies till their

grievances were redressed, consented to grant charters of privileges to all the states of the Netherlands. That of Holland and Zealand [was] commonly called the Great Charter."—C. M. Davies, *Hist. of Holland*, pt. 2, ch. 2 (v. 1), with foot-note.—"The result of the deliberations [of the assembly of the states, in 1477] is the formal grant by Duchess Mary of the 'Groot Privilege,' or Great Privilege, the Magna Charta of Holland. Although this instrument was afterwards violated, and indeed abolished, it became the foundation of the republic. It was a recapitulation and recognition of ancient rights, not an acquisition of new privileges. It was a restoration, not a revolution. Its principal points deserve attention from those interested in the political progress of mankind. 'The duchess shall not marry without consent of the estates of her provinces. All offices in her gift shall be conferred on natives only. No man shall fill two offices. No office shall be farmed. The Great Council and Supreme Court of Holland is re-established. Causes shall be brought before it on appeal from the ordinary courts. It shall have no original jurisdiction of matters within the cognizance of the provincial and municipal tribunals. The estates and cities are guaranteed in their right not to be summoned to justice beyond the limits of their territory. The cities, in common with all the provinces of the Netherlands, may hold diets as often and at such places as they choose. No new taxes shall be imposed but by consent of the provincial estates. Neither the duchess nor her descendants shall begin either an offensive or defensive war without consent of the estates. In case a war be illegally undertaken, the estates are not bound to contribute to its maintenance. In all public and legal documents, the Netherland language shall be employed. The commands of the duchess shall be invalid, if conflicting with the privileges of a city. The seat of the Supreme Council is transferred from Mechlin to the Hague. No money shall be coined, nor its value raised or lowered, but by consent of the estates. Cities are not to be compelled to contribute to requests which they have not voted. The Sovereign shall come in person before the estates, to make his request for supplies.' . . . Certainly, for the fifteenth century, the 'Great Privilege' was a reasonably liberal constitution. Where else upon earth, at that day, was there half so much liberty as was thus guaranteed?"—J. L. Motley, *The Rise of the Dutch Republic*, introd., sect. 8.

A. D. 1477.—The Austrian marriage of Mary of Burgundy.—"Several husbands were proposed to the Princess of Burgundy, and every one was of opinion there was a necessity of her marrying, to defend those territories that she had left to her, or (by marrying the dauphin), to recover what she had lost [see BURGUNDY: A. D. 1477]. Several were entirely for this match, and she was as earnest for it as anybody, before the letters she had sent by the Lord of Humbercourt and the chancellor to the king [Louis XI.] were betrayed to the ambassadors from Ghent. Some opposed the match, and urged the disproportion of their age, the dauphin being but nine years old, and besides engaged to the King of England's daughter; and these suggested the son of the Duke of Cleves. Others recom-

mended Maximilian, the emperor's son, who is at present King of the Romans." Duchess Mary made choice presently of Maximilian, then Archduke of Austria, afterwards King of the Romans and finally emperor. The husband-elect "came to Cologne, where several of the princess's servants went to meet him, and carry him money, with which, as I have been told, he was but very slenderly furnished; for his father was the stingiest and most covetous prince, or person, of his time. The Duke of Austria was conducted to Ghent, with about 700 or 800 horse in his retinue, and this marriage was consummated [Aug. 18, 1477], which at first sight brought no great advantage to the subjects of the young princess; for, instead of his supporting her, she was forced to supply him with money. His armies were neither strong enough nor in a condition to face the king's; besides which, the humour of the house of Austria was not pleasing to the subjects of the house of Burgundy, who had been bred up under wealthy princes, that had lucrative offices and employments to dispose of; whose palaces were sumptuous, whose tables were nobly served, whose dress was magnificent, and whose liveries were pompous and splendid. But the Germans are of quite a contrary temper; boorish in their manners and rude in their way of living."—Philip de Commines, *Memoirs*, bk. 6, ch. 2 (v. 2).

A. D. 1482-1493.—Maximilian and the Flemings.—The end of the Hook party in Holland.—"According to the terms of the marriage treaty between Maximilian and Mary, their eldest son, Philip, succeeded to the sovereignty of the Netherlands immediately upon the death of his mother [March 26, 1482]. As he was at this time only four years of age, Maximilian obtained the acknowledgment of himself as guardian of the young count's person, and protector of his states, by all the provinces except Flanders and Guelderland. The Flemings having secured the person of Philip at Ghent, appointed a regency." To reduce the Flemings to obedience, Maximilian carried on two campaigns in their country, during 1484 and 1485, as the result of which Ghent and Bruges surrendered. "Maximilian was acknowledged protector of Flanders during the minority of Philip, who was delivered by the Ghenters into the hands of his father, and by him entrusted to the care of Margaret of York, Duchess-dowager of Burgundy, until he became of age." Three years later (1488)—Maximilian having been, in the meantime, crowned "King of the Romans," at Aix la Chapelle, and thus cadetted, so to speak, for his subsequent coronation as emperor—the Flemings rose again in revolt. Maximilian was at Bruges, and rumor accused him of a design to occupy the city with German troops. The men of Bruges forestalled the attempt by seizing him personally and making him a prisoner. They kept him in durance for nearly four months, until he had signed a treaty, agreeing to surrender the government of the Netherlands to the young Duke Philip, his son; to place the latter under the care of the princes of the blood (his relatives on the Burgundian side); to withdraw all foreign troops, and to use his endeavors to preserve peace with France. On these terms Maximilian

obtained his liberty; but, meantime, his father, the Emperor Frederic, had marched an army to the frontiers of Brabant for his deliverance, and the very honorable King of the Romans, making haste to the shelter of these forces, repudiated with alacrity all the engagements he had sworn to. His imperial father led the army he had brought into Flanders and laid siege to Ghent; but tired of the undertaking after six weeks and returned to Germany, leaving his forces to prosecute the siege and the war. The commotions in Flanders now brought to life the popular party of the "Hooks" in Holland, and war broke out in that province. In neither part of the Netherlands were the insurgents successful. The Flemings had been helped by France, and when the French king abandoned them they were forced to buy a peace on humiliating terms and for a heavy price in cash. In Holland, the revolt languished for a time, but broke out with fresh spirit in 1490, excited by an edict which summarily altered the value of the coin. In the next year it took the name of the "Casembrotspel," or Bread and Cheese War. This insurrection was suppressed in 1492, with the help of German troops, and proved only disastrous to the province. "It was the last effort made for a considerable time by the Hollanders against the increasing power and extortion of their counts. . . . The miserable remnant of the Hook or popular party melted so entirely away that we hear of them no more in Holland: the county, formerly a power respected in itself, was now become a small and despised portion of an overgrown state." In 1494, Philip having reached the age of seventeen, and Maximilian having become emperor by the death of his father, the latter surrendered and the former was installed in the government of the Netherlands.—C. M. Davies, *Hist. of Holland*, pt. 2, ch. 3 (v. 1).

A. D. 1494-1519.—Beginning of the Austro-Spanish tyranny.—Absorption in the vast dominion of Charles V.—The seventeen Provinces, their independent constitutions and their States-General.—"In 1494, Philip, now 17 years of age, became sovereign of the Netherlands. But he would only swear to maintain the privileges granted by his grandfather and great-grandfather, Charles and Philip, and refused to acquiesce in the Great Privilege of his mother. The Estates acquiesced. For a time, Friesland, the outlying province of Holland, was severed from it. It was free, and it chose as its elective sovereign the Duke of Saxony. After a time he sold his sovereignty to the House of Hapsburg. The dissensions of the Estates had put them at the mercy of an autocratic family. Philip of Burgundy, in 1496, married Joanna, daughter of Ferdinand and Isabella. In 1500 his son Charles was born, who was afterwards Charles V., Duke of the Netherlands, but also King of Spain, Emperor of Germany, King of Jerusalem, and, by the grant of Alexander VI., alias Roderic Borgia and Pope, lord of the whole new world. Joanna, his mother, through whom he had this vast inheritance, went mad, and remained mad during her life and his [see SPAIN: A. D. 1496-1517]. Charles not only inherited his mother's and father's sovereignties, but his grandfather's also [see AUSTRIA: A. D. 1496-1526]. . . . The peril which the liberties of the Netherlands were now running was greater than ever. They had been drawn into the hands of

that dynasty which, beginning with two little Spanish kingdoms [Castile and Aragon], had in a generation developed into the mightiest of monarchies. . . . Charles succeeded his father Philip as Count of Flanders in 1506. His father, Philip the Handsome, was at Burgos in Castile, where he was attacked by fever, and died when only 28 years of age. Ten years afterwards Charles became King of Spain (1516). When he was 19 years of age (1519) he was elected emperor [see GERMANY: A. D. 1519]. The three nations over whom he was destined to rule hated each other cordially. There was antipathy from the beginning between Flemings and Spaniards. The Netherlands nobles were detested in Spain, the Spaniards in the Low Countries were equally abhorred. . . . Charles was born in Flanders, and during his whole career was much more a Fleming than a Spaniard. This did not, however, prevent him from considering his Flemish subjects as mainly destined to supply his wants, and submit to his exactions. He was always hard pressed for money. The Germans were poor and turbulent. The conquest and subjection of the Moorish population in Spain had seriously injured the industrial wealth of that country. But the Flemings were increasing in riches, particularly the inhabitants of Ghent. They had to supply the funds which Charles required in order to carry out the operations which his necessities or his policy rendered urgent. He had been taught, and he readily believed, that his subjects' money was his own. Now just as Charles had come to the empire, two circumstances had occurred which have had a lasting influence over the affairs of Western Europe. The first of these was the conquest of Egypt by the Turks under Selim I (1512-20). . . . Egypt had for nearly two centuries been the only route by which Eastern produce, so much valued by European nations, could reach the consumer. . . . Now this trade, trifling to be sure to our present experience, was of the highest importance to the trading towns of Italy, the Rhine, and the Netherlands. . . . But the Netherlands had two industries which saved them from the losses which affected the Germans and Italians. They were still the weavers of the world. They still had the most successful fisheries. . . . The other cause was the revolt against the papacy" [the Reformation—see PAPACY: A. D. 1516-1517, and after].—J. E. T. Rogers, *The Story of Holland*, ch. 5-6.—The seventeen provinces comprehended under the name of the Netherlands, as ruled by Charles V., were the four duchies of Brabant, Limburg, Luxemburg, and Guelderland; the seven counties of Artois, Hainault, Flanders, Namur, Zutphen, Holland, and Zealand; the five seigniories or lordships of Friesland, Mechlin, Utrecht, Overysse, and Groningen; and the margraviate of Antwerp. "Of these provinces, the four which adjoined the French border, and in which a French dialect was spoken, were called Walloon [see WALLOONS]; in the other provinces a dialect, more or less resembling German, prevailed, that of the midland ones being Flemish, that of the northern, Dutch. They differed still more in their laws and customs than in language. Each province was an independent state, having its own constitution, which secured more liberty to those who lived under it than was then commonly enjoyed in most other parts of Europe. . . . The only institutions

which supplied any links of union among the different provinces were the States-General, or assembly of deputies sent from each, and the Supreme Tribunal established at Mechlin, having an appellate jurisdiction over them all. The States-General, however, had no legislative authority, nor power to impose taxes, and were but rarely convened. . . . The members of the States-General were not representatives chosen by the people, but deputies, or ambassadors, from certain provinces. The different provinces had also their own States."—T. H. Dyer, *Hist. of Modern Europe*, v. 2, pp. 221-222.

A. D. 1512.—Burgundian provinces included in the Circle of Burgundy. See GERMANY: A. D. 1493-1519.

A. D. 1521-1555.—The Reformation in the Provinces.—The "Placards" and Persecutions of Charles V.—The Edict of 1550.—The Planting of the Inquisition.—"The people of the Netherlands were noted not less for their ingenuity shown in the invention of machines and implements, and for their proficiency in science and letters, than for their opulence and enterprise. It was their boast that common laborers, even the fishermen who dwelt in the huts of Friesland, could read and write, and discuss the interpretation of Scripture. . . . In such a population, among the countrymen of Erasmus, where, too, in previous ages, various forms of innovation and dissent had arisen, the doctrines of Luther must inevitably find an entrance. They were brought in by foreign merchants, 'together with whose commodities,' writes the old Jesuit historian Strada, 'this plague often sails.' They were introduced with the German and Swiss soldiers, whom Charles V. had occasion to bring into the country. Protestantism was also transplanted from England by numerous exiles who fled from the persecution of Mary. The contiguity of the country to Germany and France provided abundant avenues for the incoming of the new opinions. 'Nor did the Rhine from Germany, or the Meuse from France,' to quote the regretful language of Strada, 'send more water into the Low Countries, than by the one the contagion of Luther, by the other of Calvin, was imported into the same Belgic provinces.' The spirit and occupations of the people, the whole atmosphere of the country, were singularly propitious for the spread of the Protestant movement. The cities of Flanders and Brabant, especially Antwerp, very early furnished professors of the new faith. Charles V. issued, in 1521, from Worms, an edict, the first of a series of barbarous enactments or 'Placards,' for the extinguishing of heresy in the Netherlands; and it did not remain a dead letter. In 1523, two Augustinian monks were burned at the stake in Brussels. . . . The edicts against heresy were imperfectly executed. The Regent, Margaret of Savoy, was lukewarm in the business of persecution; and her successor, Maria, the Emperor's sister, the widowed Queen of Hungary, was still more leniently disposed. The Protestants rapidly increased in number. Calvinism, from the influence of France, and of Geneva, where young men were sent to be educated, came to prevail among them. Anabaptists and other licentious or fanatical sectaries, such as appeared elsewhere in the wake of the Reformation, were numerous; and their excesses afforded a plausible pretext for violent meas-

ures of repression against all who departed from the old faith. In 1550, Charles V. issued a new Placard, in which the former persecuting edicts were confirmed, and in which a reference was made to Inquisitors of the faith, as well as to the ordinary judges of the bishops. This excited great alarm, since the Inquisition was an object of extreme aversion and dread. The foreign merchants prepared to leave Antwerp, prices fell, trade was to a great extent suspended; and such was the disaffection excited, that the Regent Maria interceded for some modification of the obnoxious decree. Verbal changes were made, but the fears of the people were not quieted; and it was published at Antwerp in connection with a protest of the magistrates in behalf of the liberties which were put in peril by a tribunal of the character threatened. 'And,' says the learned Arminian historian, 'as this affair of the Inquisition and the oppression from Spain prevailed more and more, all men began to be convinced that they were destined to perpetual slavery.' Although there was much persecution in the Netherlands during the long reign of Charles, yet the number of martyrs could not have been so great as 50,000, the number mentioned by one writer, much less 100,000, the number given by Grotius."—G. P. Fisher, *The Reformation*, ch. 9.—"His hand [that of Charles V.] planted the inquisition in the Netherlands. Before his day it is idle to say that the diabolical institution ever had a place there. The isolated cases in which inquisitors had exercised functions proved the absence and not the presence of the system. . . . Charles introduced and organized a papal inquisition, side by side with those terrible 'placards' of his invention, which constituted a masked inquisition even more cruel than that of Spain. . . . The number of Netherlanders who were burned, strangled, beheaded, or buried alive, in obedience to his edicts . . . has been placed as high as 100,000 by distinguished authorities, and have never been put at a lower mark than 50,000. The Venetian envoy Navigero placed the number of victims in the provinces of Holland and Friesland alone at 30,000, and this in 1546, ten years before the abdication, and five before the promulgation of the hideous edict of 1550. . . . 'No one,' said the edict [of 1550], 'shall print, write, copy, keep, conceal, sell, buy, or give in churches, streets, or other places, any book or writing made by Martin Luther, John Ecolampadius, Ulrich Zwinglius, Martin Bucer, John Calvin, or other heretics reprobated by the Holy Church; . . . nor break, or otherwise injure the images of the holy virgin or canonized saints; . . . nor in his house hold conventicles, or illegal gatherings, or be present at any such in which the adherents of the above-mentioned heretics teach, baptize, and form conspiracies against the Holy Church and the general welfare. . . . Moreover, we forbid . . . all lay persons to converse or dispute concerning the Holy Scriptures, openly or secretly, especially on any doubtful or difficult matters, or to read, teach, or expound the Scriptures, unless they have duly studied theology and been approved by some renowned university; . . . or to preach secretly, or openly, or to entertain any of the opinions of the above-mentioned heretics. . . . Such perturbators of the general quiet are to be executed, to wit: the men with the sword and the women to be buried alive, if they do not

persist in their errors; if they do persist in them they are to be executed with fire; all their property in both cases being confiscated to the crown." The horrible edict further bribed informers, by promising to them half the goods of a convicted heretic, while, at the same time, it forbade, under sharp penalties, any petitioning for pardon in favor of such heretics.—J. L. Motley, *The Rise of the Dutch Republic*, pt. 1, ch. 1, and pt. 2, ch. 1 (v. 1).

A. D. 1539-1540.—The revolt and enslavement of Ghent. See GHENT: A. D. 1539-1540.

A. D. 1547.—Pragmatic Sanction of Charles V. changing the Relations of his Burgundian inheritance to the Empire.—In the Germanic diet assembled at Augsburg in 1547, after the Emperor's defeat of the Protestant princes at Muhlberg (see GERMANY: A. D. 1546-1552), he was able to exercise his will almost without opposition and decree arbitrarily whatever he chose. He there "proclaimed the Pragmatic Sanction for the Netherlands, whereby his old Burgundian inheritance was declared by his own law to be indivisible, the succession settled on the house of Hapsburg, it was attached to the German empire as a tenth district, had to pay certain contributions, but was not to be subject to the Imperial Chamber or the Imperial Court of Judicature. He thus secured the personal union of these territories with his house, and made it the duty of the empire to defend them, while at the same time he withdrew them from the jurisdiction of the empire; it was a union by which the private interests of the house of Hapsburg had everything to gain, but which was of no advantage to the empire."—L. Häusser, *The Period of the Reformation*, ch. 16.

A. D. 1555.—The Abdication of Charles V.—Accession of Philip II.—His sworn promises.—"In the autumn of this year [1555] the world was astonished by the declaration of the emperor's intention to resign all his vast dominions, and spend the remainder of his days in a cloister.

... On the 25th of October, the day appointed for the ceremony [of the surrender of the sovereignty of the Netherlands], the knights of the Golden Fleece, and the deputies of all the states of the Netherlands assembled at Brussels. ... On the day after the emperor's resignation the mutual oaths were taken by Philip and the states of Holland; the former swore to maintain all the privileges which they now enjoyed, including those granted or confirmed at his installation as heir in 1549. He afterwards renewed the promise made by Charles in the month of May preceding, that no office in Holland, except that of stadtholder, should be given to foreigners or to Netherlanders of those provinces in which Hollanders were excluded from offices. In the January of the next year [1556] the emperor resigned the crown of Spain to his son, reserving only an annuity of 100,000 crowns, and on the 7th of September following, having proceeded to Zealand to join the fleet destined to carry him to Spain, he surrendered the imperial dignity to his brother Ferdinand." He then proceeded to the cloister of St. Just, in Spain, where he lived in retirement until his death, which occurred August 21, 1558.—C. M. Davies, *Hist. of Holland*, pt. 2, ch. 6 (v. 1).

ALSO IN: W. Stirling, *Cloister Life of Charles V.*—O. Delepierre, *Historical Difficulties*, ch. 10.

A. D. 1555-1559.—Opening of the dark and bloody reign of Philip II. of Spain.—His malignity.—His perfidy.—His evil and plotting industry.—"Philip, bred in this [Spanish] school of slavish superstition, taught that he was the despot for whom it was formed, familiar with the degrading tactics of eastern tyranny, was at once the most contemptible and unfortunate of men. ... He was perpetually filled with one idea—that of his greatness; he had but one ambition—that of command; but one enjoyment—that of exciting fear. ... Deceit and blood were his greatest, if not his only, delights. The religious zeal which he affected, or felt, showed itself but in acts of cruelty; and the fanatic bigotry which inspired him formed the strongest contrast to the divine spirit of Christianity. ... Although ignorant, he had a prodigious instinct of cunning. He wanted courage, but its place was supplied by the harsh obstinacy of wounded pride. All the corruptions of intrigue were familiar to him; yet he often failed in his most deep-laid designs, at the very moment of their apparent success, by the recoil of the bad faith and treachery with which his plans were overcharged. Such was the man who now began that terrible reign which menaced utter ruin to the national prosperity of the Netherlands. ... Philip had only once visited the Netherlands before his accession to sovereign power. ... Every thing that he observed on this visit was calculated to revolt both [his opinions and his prejudices]. The frank cordiality of the people appeared too familiar. The expression of popular rights sounded like the voice of rebellion. Even the magnificence displayed in his honour offended his jealous vanity. From that moment he seems to have conceived an implacable aversion to the country, in which alone, of all his vast possessions, he could not display the power or inspire the terror of despotism. The sovereign's dislike was fully equalled by the disgust of his subjects. ... Yet Philip did not at first act in a way to make himself more particularly hated. He rather, by an apparent consideration for a few points of political interest and individual privilege, and particularly by the revocation of some of the edicts against heretics, removed the suspicions his earlier conduct had excited; and his intended victims did not perceive that the despot sought to lull them to sleep, in the hopes of making them an easier prey. Philip knew well that force alone was insufficient to reduce such a people to slavery. He succeeded in persuading the states to grant him considerable subsidies, some of which were to be paid by instalments during a period of nine years. That was gaining a great step towards his designs. ... At the same time he sent secret agents to Rome, to obtain the approbation of the pope to his insidious but most effective plan for placing the whole of the clergy in dependence upon the crown. He also kept up the army of Spaniards and Germans which his father had formed on the frontiers of France; and although he did not remove from their employments the functionaries already in place, he took care to make no new appointments to office among the natives of the Netherlands. ... To lead his already deceived subjects the more surely into the snare, he announced his intended departure on a short visit

to Spain; and created for the period of his absence a provisional government, chiefly composed of the leading men among the Belgian nobility. He flattered himself that the states, dazzled by the illustrious illusion thus prepared, would cheerfully grant to this provisional government the right of levying taxes during the temporary absence of the sovereign. He also reckoned on the influence of the clergy in the national assembly, to procure the revival of the edicts against heresy, which he had gained the merit of suspending. . . . As soon as the states had consented to place the whole powers of government in the hands of the new administration for the period of the king's absence, the royal hypocrite believed his scheme secure, and flattered himself he had established an instrument of durable despotism. . . . The edicts against heresy, soon adopted [including a re-enactment of the terrible edict of 1550—see above], gave to the clergy an almost unlimited power over the lives and fortunes of the people. But almost all the dignitaries of the church being men of great respectability and moderation, chosen by the body of the inferior clergy, these extraordinary powers excited little alarm. Philip's project was suddenly to replace these virtuous ecclesiastics by others of his own choice [through a creation of new bishoprics], as soon as the states broke up from their annual meeting; and for this intention he had procured the secret consent and authority of the court of Rome. In support of these combinations, the Belgian troops were completely broken up and scattered in small bodies over the country. . . . To complete the execution of this system of perfidy, Philip convened an assembly of all the states at Ghent, in the month of July, 1559. . . . Anthony Perrenotte de Granvelle, bishop of Arras [afterwards cardinal], who was considered as Philip's favorite counsellor, but who was in reality no more than his docile agent, was commissioned to address the assembly in the name of his master, who spoke only Spanish. His oration was one of cautious deception." It announced the appointment of Margaret, duchess of Parma, a natural daughter of Charles V., and therefore half-sister of Philip, to preside as regent over the government of the Netherlands during the absence of the sovereign. It also urged with skillful plausibility certain requests for money on the part of the latter. "But notwithstanding all the talent, the caution, and the mystery of Philip and his minister, there was among the nobles one man [William of Nassau, prince of Orange and stadtholder, or governor, of Holland, Zealand, and Utrecht] who saw through all. Without making himself suspiciously prominent, he privately warned some members of the states of the coming danger. Those in whom he confided did not betray the trust. They spread among the other deputies the alarm, and pointed out the danger to which they had been so judiciously awakened. The consequence was, a reply to Philip's demand, in vague and general terms, without binding the nation by any pledge; and an unanimous entreaty that he would diminish the taxes, withdraw the foreign troops, and entrust no official employments to any but natives of the country. The object of this last request was the removal of Granvelle, who was born in Franche-Comté. Philip was utterly astounded at all this. In the first moment of his vexation he imprudently

cried out, 'Would ye, then, also bereave me of my place; I, who am a Spaniard?' But he soon recovered his self-command, and resumed his usual mask; expressed his regret at not having sooner learned the wishes of the state; promised to remove the foreign troops within three months; and set off for Zealand, with assumed composure, but filled with the fury of a discovered traitor and a humiliated despot." In August, 1559, he sailed for Spain.—T. C. Grattan, *Hist. of the Netherlands*, ch. 7.—"Crafty, saturnine, atrabilious, always dissembling and suspecting, sombre, and silent like night when brooding over the hatching storm, he lived shrunk within himself, with only the fellowship of his gloomy thoughts and cruel resolves. . . . There is something terrific in the secrecy, dissimulation and dogged perseverance with which Philip would, during a series of years, meditate and prepare the destruction of one man, or of a whole population, and something still more awful in the icy indifference, the superhuman insensibility, the accumulated cold-blooded energy of hoarded-up vengeance with which, at the opportune moment, he would issue a dry sentence of extermination. . . . He seemed to take pleasure in distilling, slowly and chemically, the poison which, Python-like, he darted at every object which he detested or feared, or which he considered an obstacle in his path."—C. Gayarré, *Philip II. of Spain*, ch. 1.

A. D. 1559-1562.—The Spanish troops, the new bishoprics, and the shadow of the Inquisition.—The appeal of Brabant to its ancient "Joyeuse Entrée."—"The first cause of trouble, after Philip's departure from the Netherlands, arose from the detention of the Spanish troops there. The king had pledged his word . . . that they should leave the country by the end of four months, at farthest. Yet that period had long since passed, and no preparations were made for their departure. The indignation of the people rose higher and higher at the insult thus offered by the presence of these detested foreigners. It was a season of peace. No invasion was threatened from abroad; no insurrection existed at home. . . . Granvelle himself, who would willingly have pleased his master by retaining a force in the country on which he could rely, admitted that the project was impracticable. 'The troops must be withdrawn,' he wrote, 'and that speedily, or the consequence will be an insurrection.' . . . The Prince of Orange and Count Egmont threw up the commands intrusted to them by the king. They dared no longer hold them, as the minister added, it was so unpopular. . . . Yet Philip was slow in returning an answer to the importunate letters of the regent and the minister; and when he did reply, it was to evade their request. . . . The regent, however, saw that, with or without instructions, it was necessary to act. . . . The troops were ordered to Zealand, in order to embark for Spain. But the winds proved unfavorable. Two months longer they were detained, on shore or on board the transports. They soon got into brawls with the workmen employed on the dikes; and the inhabitants, still apprehensive of orders from the king countermanding the departure of the Spaniards, resolved, in such an event, to abandon the dikes, and lay the country under water! Fortunately, they were not driven to this extremity. In January, 1561, more than a year after the date

assigned by Philip, the nation was relieved of the presence of the intruders. . . . This difficulty was no sooner settled than it was followed by another scarcely less serious." Arrangements had been made for "adding 13 new bishoprics to the four already existing in the Netherlands. . . . The whole affair had been kept profoundly secret by the government. It was not till 1561 that Philip disclosed his views, in a letter to some of the principal nobles in the council of state. But, long before that time, the project had taken wind, and created a general sensation through the country. The people looked on it as an attempt to subject them to the same ecclesiastical system which existed in Spain. The bishops, by virtue of their office, were possessed of certain inquisitorial powers, and these were still further enlarged by the provisions of the royal edicts. . . . The present changes were regarded as part of a great scheme for introducing the Spanish Inquisition into the Netherlands. . . . The nobles had other reasons for opposing the measure. The bishops would occupy in the legislature the place formerly held by the abbots, who were indebted for their election to the religious houses over which they presided. The new prelates, on the contrary, would receive their nomination from the crown; and the nobles saw with alarm their own independence menaced by the accession of an order of men who would naturally be subservient to the interests of the monarch. . . . But the greatest opposition arose from the manner in which the new dignitaries were to be maintained. This was to be done by suppressing the offices of the abbots, and by appropriating the revenues of their houses to the maintenance of the bishops. . . . Just before Philip's departure from the Netherlands, a bull arrived from Rome authorizing the erection of the new bishoprics. This was but the initiatory step. Many other proceedings were necessary before the consummation of the affair. Owing to impediments thrown in the way by the provinces, and the habitual tardiness of the court of Rome, nearly three years elapsed before the final briefs were expedited by Pius IV."—W. H. Prescott, *Hist. of the Reign of Philip II.*, bk. 2, ch. 6 (v. 1).—"Against the arbitrary policy embodied in the edicts, the new bishoprics and the foreign soldiery, the Netherlands appealed to their ancient constitutions. These charters were called 'handvests' in the vernacular Dutch and Flemish, because the sovereign made them fast with his hand. As already stated, Philip had made them faster than any of the princes of his house had ever done, so far as oath and signature could accomplish that purpose, both as hereditary prince in 1549, and as monarch in 1555. . . . Of these constitutions, that of Brabant, known by the title of the 'joyeuse entrée' 'blyde inkomst,' or blythe entrance, furnished the most decisive barrier against the present wholesale tyranny. First and foremost, the 'joyous entry' provided, 'that the prince of the land should not elevate the clerical state higher than of old has been customary and by former princes settled; unless by consent of the other two estates, the nobility and the cities.' Again, 'the prince can prosecute no one of his subjects, nor any foreign resident, civilly or criminally, except in the ordinary and open courts of justice in the province, where the accused may answer and defend him-

self with the help of advocates.' Further, 'the prince shall appoint no foreigners to office in Brabant.' Lastly 'should the prince, by force or otherwise, violate any of these privileges, the inhabitants of Brabant, after regular protest entered, are discharged of their oaths of allegiance, and, as free, independent, and unbound people, may conduct themselves exactly as seems to them best.' Such were the leading features, so far as they regarded the points now at issue, of that famous constitution which was so highly esteemed in the Netherlands, that mothers came to the province in order to give birth to their children, who might thus enjoy, as a birthright, the privileges of Brabant. Yet the charters of the other provinces ought to have been as effective against the arbitrary course of the government. 'No foreigner,' said the constitution of Holland, 'is eligible as councillor, financier, magistrate, or member of a court. Justice can be administered only by the ordinary tribunals and magistrates. The ancient laws and customs shall remain inviolable. Should the prince infringe any of these provisions, no one is bound to obey him.' These provisions from the Brabant and Holland charters are only cited as illustrative of the general spirit of the provincial constitutions. Nearly all the provinces possessed privileges equally ample, duly signed and sealed."—J. L. Motley, *The Rise of the Dutch Republic*, pt. 2, ch. 2 (v. 1).

A. D. 1562-1566.—Beginning of organized resistance to the tyranny and persecution of Philip.—The signing of the Compromise.—The League of the Gueux.—William of Orange now "claimed, in the name of the whole country, the convocation of the states-general. This assembly alone was competent to decide what was just, legal, and obligatory for each province and every town. . . . The ministers endeavored to evade a demand which they were at first unwilling openly to refuse. But the firm demeanor and persuasive eloquence of the prince of Orange carried before them all who were not actually bought by the crown; and Granvelle found himself at length forced to avow that an express order from the king forbade the convocation of the states, on any pretext, during his absence. The veil was thus rent asunder, which had in some measure concealed the deformity of Philip's despotism. The result was a powerful confederacy among all who held it odious, for the overthrow of Granvelle, to whom they chose to attribute the king's conduct. . . . Those who composed this confederacy against the minister were actuated by a great variety of motives. . . . It is doubtful if any of the confederates except the prince of Orange clearly saw that they were putting themselves in direct and personal opposition to the king himself. William alone, clear-sighted in politics and profound in his views, knew, in thus devoting himself to the public cause, the adversary with whom he entered the lists. This great man, for whom the national traditions still preserve the sacred title of 'father' (Vader-Willem), and who was in truth not merely the parent but the political creator of the country, was at this period in his 30th year. . . . Philip, . . . driven before the popular voice, found himself forced to the choice of throwing off the mask at once, or of sacrificing

Granvelle. An invincible inclination for manœuvring and deceit decided him on the latter measure; and the cardinal, recalled but not disgraced, quitted the Netherlands on the 10th of March, 1564. The secret instructions to the government remained unrevoked; the president Viglius succeeded to the post which Granvelle had occupied; and it was clear that the projects of the king had suffered no change. Nevertheless some good resulted from the departure of the unpopular minister. The public fermentation subsided; the patriot lords reappeared at court; and the prince of Orange acquired an increasing influence in the council and over the government. . . . It was resolved to dispatch a special envoy to Spain, to explain to Philip the views of the council. . . . The count of Egmont, chosen by the council for this important mission, set out for Madrid in the month of February, 1565. Philip received him with profound hypocrisy; loaded him with the most flattering promises; sent him back in the utmost elation: and when the credulous count returned to Brussels, he found that the written orders, of which he was the bearer, were in direct variance with every word which the king had uttered. These orders were chiefly concerning the reiterated subject of the persecution to be inflexibly pursued against the religious reformers. Not satisfied with the hitherto established forms of punishment, Philip now expressly commanded that the more revolting means decreed by his father in the rigor of his early zeal, such as burning, living burial, and the like, should be adopted. . . . Even Viglius was terrified by the nature of Philip's commands; and the patriot lords once more withdrew from all share in the government, leaving to the duchess of Parma and her ministers the whole responsibility of the new measures. They were at length put into actual and vigorous execution in the beginning of the year 1566. The inquisitors of the faith, with their familiars, stalked abroad boldly in the devoted provinces, carrying persecution and death in their train. Numerous but partial insurrections opposed these odious intruders. Every district and town became the scene of frightful executions or tumultuous resistance."—T. C. Grattan, *Hist. of the Netherlands*, ch. 7.—In November, 1565, a meeting of Flemish nobles was held at Culenborg House, Brussels, where they formed a league, in which Philip de Marnix, Lord of Ste. Aldegonde, Count Louis of Nassau, a younger brother of the Prince of Orange, and Viscount Brederode, were the foremost leaders. "In a meeting held at Breda, in Jan'y. 1566, the league promulgated their views in a paper called the Compromise, attributed to the hand of Ste. Aldegonde. The document contained a severe denunciation of the inquisition as an illegal, pernicious and iniquitous tribunal; the subscribers swore to defend one another against any attack that might be made upon them; and declared, at the same time, that they did not mean to throw off their allegiance to the King. . . . In the course of two months the Compromise was signed by about 2,000 persons, including many Catholics; but only a few of the great nobles could be prevailed on to subscribe it. . . . The Prince of Orange at first kept aloof from the league, and at this period Egmont, who was of a more impulsive temper, seemed to act the leading part; but the nation relied solely

upon William. The latter gave at least a tacit sanction to the league in the spring of 1566, by joining the members of it in a petition to the Regent which he had himself revised."—T. H. Dyer, *Hist. of Modern Europe*, bk. 3, ch. 7 (v. 2).—"The league had its origin in banquets, and a banquet gave it form and perfection. . . . Brederode entertained the confederates in Kulemberg House; about 300 guests assembled; intoxication gave them courage, and their audacity rose with their numbers. During the conversation, one of their number happened to remark that he had overheard the Count of Barlaimont whisper in French to the regent, who was seen to turn pale on the delivery of the petitions, that 'she need not be afraid of a band of beggars (gueux)'. . . . Now, as the very name for their fraternity was the very thing which had most perplexed them, an expression was eagerly caught up, which, while it cloaked the presumption of their enterprise in humility, was at the same time appropriate to them as petitioners. Immediately they drank to one another under this name, and the cry 'Long live the gueux!' was accompanied with a general shout of applause. . . . What they had resolved on in the moment of intoxication they attempted, when sober, to carry into execution. . . . In a few days, the town of Brussels swarmed with ash-gray garments, such as were usually worn by mendicant friars and penitents. Every confederate put his whole family and domestics in this dress. Some carried wooden bowls thinly overlaid with plates of silver, cups of the same kind, and wooden knives; in short, the whole paraphernalia of the beggar tribe, which they either fixed round their hats or suspended from their girdles. . . . Hence the origin of the name 'Gueux,' which was subsequently borne in the Netherlands by all who seceded from popery, and took up arms against the king."—F. Schiller, *History of the Revolt of the Netherlands*, bk. 3.

A. D. 1566-1568.—Field preaching under arms.—The riots of the Image-breakers.—Philip's schemes of revenge.—Discouragement and retirement of Orange.—Blindness of Egmont and Horn, and their fate.—"While the Privy Council was endeavouring to obtain a 'Moderation' of the Edicts, and . . . effected that the heretics should be no longer burnt but hung, and that the Inquisition should proceed 'prudently, and with circumspection,' a movement broke out among the people which mocked at all Edicts. The open country was suddenly covered with thousands of armed noblemen, citizens, and peasants, who assembled in large crowds in the open air to listen to some heretical preacher, Lutheran, Calvinist, or even an Anabaptist, and to hold forbidden services, with prayers and hymns, in the mother tongue. They sallied forth with pistols, arquebuses, flails, and pitchforks; the place of meeting was marked out like a camp, and surrounded by guards; from 10,000 to 20,000 assembled, the armed men outside, the women and children within. After the immense choir had sung a psalm, one of the excommunicated preachers appeared between two pikes (according to the 'Moderation' a price was set upon the head of every one of them), and expounded the

new doctrine from the Scriptures; the assembly listened in devout silence, and when the service was ended separated quietly, but defiantly. This was repeated day after day throughout the country, and nobody dared to attack the armed field preachers. The Regent was in a painful situation; she was always having it proclaimed that the Edicts were in force, but nobody cared. . . . It was all in vain unless foreign troops came to enforce obedience, and these she had neither power nor funds to procure. The King hesitated in his usual fashion, and left the Regent to the torments of powerlessness and uncertainty. Meanwhile the universal excitement bore fatal fruit. Instead of the dignified preachings and peaceful assemblies of May, in June and July there were wild excesses and furious mobs. Orange had just persuaded the Regent to permit the field preaching in the open country, if they avoided the towns, when the first great outbreak occurred in Antwerp. Two days after a great procession, on the 18th of August, 1566, at which the Catholic clergy of Antwerp had made a pompous display to the annoyance of the numerous Protestants, the beautiful cathedral was invaded by a furious mob, who destroyed without mercy all the images, pictures, and objects of art that it contained. This demolition of images, the stripping of churches, desecration of chapels, and destruction of all symbols of the ancient faith, spread from Antwerp to other places, Tournay, Valenciennes, &c. It was done with a certain moderation, for neither personal violence nor theft took place anywhere, though innumerable costly articles were lying about. Still, these fanatical scenes not only excited the ire of Catholics, but of every religious man; in Antwerp, especially, the seafaring mob had rushed upon everything that had been held sacred for centuries. In her distress the Regent wished to flee from Brussels, but Orange, Egmont, and Horn compelled her to remain, and induced her to proclaim the Act of the 25th of August, by which an armistice was decided on between Spain and the Beggars. In this the Government conceded the abolition of the Inquisition and the toleration of the new doctrines, and the Beggars declared that for so long as this promise was kept their league was dissolved. In consideration of this, the first men in the country agreed to quell the disturbances in Flanders, Antwerp, Tournay, and Malines, and to restore peace. Orange effected this in Antwerp like a true statesman, who knew how to keep himself above party spirit; but in Flanders, Egmont, on the contrary, went to work like a brutal soldier; he stormed against the heretics like Philip's Spanish executioners, and the scales fell from the eyes of the bitterly disappointed people. Meanwhile a decision had been come to at Madrid. . . . When at length the irresolute King had determined to proclaim an amnesty, though it was really rather a proscription, and to promise indulgence, while he was assuring the Pope by protocol before notaries that he never would grant any, the news came of the image riots of August, and a report from the Duchess in which she humbly begged the King's pardon for having allowed a kind of religious peace to be extorted from her, but she was entirely innocent; they had forced it from her as a prisoner in her palace, and there was one comfort, that the King was not bound by a promise made only in her name. Philip's rage was boundless. . . . He was re-

solved upon fearful revenge, even when he was writing that he should know how to restore order in his provinces by means of grace and mercy. . . . Well-informed as Orange was, he understood the whole situation perfectly; he knew that while the Regent was heaping flattery upon him, she and Philip were compassing his destruction; that her only object could be to keep the peace until the Spanish preparations were complete, and meanwhile, if possible, to compromise him with the people. He wrote to Egmont, and laid the dangers of their situation before him, and communicated his resolve either to escape Philip's revenge by flight, or to join with his friends in armed resistance to the expected attack of the Spanish army. But Egmont in his unhappy blindness had resolved to side with the Government which was more than ever determined on his destruction, and the meeting at Dendermonde, October, 1566, when Orange consulted him, Louis of Nassau, and Hogstraeten, as to a plan of united action, was entirely fruitless. . . . Admiral Horn, who had staked large property in the service of the Emperor and King, and had never received the least return in answer to his just demands, gave up his office, and, like a weary philosopher, retired into solitude. Left entirely alone, Orange thought of emigrating; in short, the upper circle of the previous party of opposition no longer existed. But it was not so with the mad leaders of the Beggars. While the zealous inhabitants of Valenciennes, incited by two of the most dauntless Calvinistic preachers, undertook to defend themselves against the royal troops with desperate bravery, Count Brederode went about the country with a clang of sabres, exciting disturbances in order to give the heretics at Valenciennes breathing-time by a happy diversion. . . . All that Philip wanted to enable him to gain the day was an unsuccessful attempt at revolt. The attack upon images and the Beggars' volunteer march did more for the Government than all Granvella's system; . . . drove every one who favoured the Catholics and loved peace into the arms of the Government. The reaction set in with the sanguinary defeat of the rebels at Valenciennes, who never again even made an attempt at resistance. Orange gave up the liberties of his country for lost. . . . Stating that he could never take the new oath of fealty which was required, because it would oblige him to become the executioner of his Protestant countrymen, he renounced his offices and dignities, . . . made a last attempt to save his friend Egmont, . . . and retired to Dillenburg, the ancient property of the family. He wished to be spared for better times; he saw the storm coming, and was too cool-headed to offer himself as the first sacrifice. In fact, just when he was travelling towards Germany, Duke Alba [more commonly called Alva], the hangman of the Netherlands, was on his way to his destination." Alva arrived in August, 1567, with an army of 10,000 carefully picked veterans, fully empowered to make the Netherlands a conquered territory and deal with it as such. His first important act was the treacherous seizure and imprisonment of Egmont and Horn. Then the organization of terror began. The imprisonment and the mockery of a trial of the two most distinguished victims was protracted until the 5th of June, 1568, when they were beheaded in the great square at Brussels.—L. Häusser, *The Period of the Reformation*, ch. 22-23.

ALSO IN: J. L. Motley, *The Rise of the Dutch Republic*, pt. 2, ch. 6-10, and pt. 3, ch. 1-2.—F. Schiller, *Hist. of the Revolt of the Netherlands*, bk. 3-4.

A. D. 1567.—The Council of Blood.—“In the same despatch of the 9th September [1567], in which the Duke communicated to Philip the capture of Egmont and Horn, he announced to him his determination to establish a new court for the trial of crimes committed during the recent period of troubles. This wonderful tribunal was accordingly created with the least possible delay. It was called the Council of Troubles, but it soon acquired the terrible name, by which it will be forever known in history, of the Blood-Council. It superseded all other institutions. Every court, from those of the municipal magistracies up to the supreme councils of the provinces, were forbidden to take cognisance in future of any cause growing out of the late troubles. The Council of State, although it was not formally disbanded, fell into complete desuetude, its members being occasionally summoned into Alva's private chambers in an irregular manner, while its principal functions were usurped by the Blood-Council. Not only citizens of every province, but the municipal bodies, and even the sovereign provincial Estates themselves, were compelled to plead, like humble individuals, before this new and extraordinary tribunal. It is unnecessary to allude to the absolute violation which was thus committed of all charters, laws, and privileges, because the very creation of the Council was a bold and brutal proclamation that those laws and privileges were at an end. . . . So well . . . did this new and terrible engine perform its work, that in less than three months from the time of its erection, 1,800 human beings had suffered death by its summary proceedings; some of the highest, the noblest, and the most virtuous in the land among the number; nor had it then manifested the slightest indication of faltering in its dread career. Yet, strange to say, this tremendous court, thus established upon the ruins of all the ancient institutions of the country, had not been provided with even a nominal authority from any source whatever. The King had granted it no letters patent or charter, nor had even the Duke of Alva thought it worth while to grant any commissions, either in his own name or as Captain-General, to any of the members composing the board. The Blood-Council was merely an informal club, of which the Duke was perpetual president, while the other members were all appointed by himself. Of these subordinate councillors, two had the right of voting, subject, however, in all cases, to his final decision, while the rest of the number did not vote at all. It had not, therefore, in any sense, the character of a judicial, legislative, or executive tribunal, but was purely a board of advice by which the bloody labours of the Duke were occasionally lightened as to detail, while not a feather's weight of power or of responsibility was removed from his shoulders. He reserved for himself the final decision upon all causes which should come before the Council, and stated his motives for so doing with grim simplicity. ‘Two reasons,’ he wrote to the King, ‘have determined me thus to limit the power of the tribunal; the first that, not knowing its members, I might be easily deceived by them; the second, that the men of law only con-

demn for crimes which are proved; whereas your Majesty knows that affairs of state are governed by very different rules from the laws which they have here.’ It being, therefore, the object of the Duke to compose a body of men who would be of assistance to him in condemning for crimes which could not be proved, and in slipping over statutes which were not to be recognised, it must be confessed that he was not unfortunate in the appointments which he made to the office of councillors. . . . No one who was offered the office refused it. Noircarmes and Berlaymont accepted with very great eagerness. Several presidents and councillors of the different provincial tribunals were appointed, but all the Netherlanders were men of straw. Two Spaniards, Del Rio and Vargas, were the only members who could vote, while their decisions, as already stated, were subject to reversal by Alva. Del Rio was a man without character or talent, a mere tool in the hands of his superiors, but Juan de Vargas was a terrible reality. No better man could have been found in Europe for the post to which he was thus elevated. To shed human blood was, in his opinion, the only important business and the only exhilarating pastime of life. . . . It was the duty of the different subalterns, who, as already stated, had no right of voting, to prepare reports upon the cases. Nothing could be more summary. Information was lodged against a man, or against a hundred men, in one document. The Duke sent the papers to the Council, and the inferior councillors reported at once to Vargas. If the report concluded with a recommendation of death to the man or the hundred men in question, Vargas instantly approved it, and execution was done upon the man, or the hundred men, within 48 hours. If the report had any other conclusion, it was immediately sent back for revision, and the reporters were overwhelmed with reproaches by the President. Such being the method of operation, it may be supposed that the councillors were not allowed to slacken in their terrible industry. The register of every city, village, and hamlet throughout the Netherlands showed the daily lists of men, women, and children thus sacrificed at the shrine of the demon who had obtained the mastery over this unhappy land. It was not often that an individual was of sufficient importance to be tried—if trial it could be called—by himself. It was found more expeditious to send them in batches to the furnace. Thus, for example, on the 4th of January, 84 inhabitants of Valenciennes were condemned; on another day, 95 miscellaneous individuals from different places in Flanders; on another, 46 inhabitants of Malines; on another, 35 persons from different localities, and so on. . . . Thus the whole country became a charnel-house; the death-bell tolled hourly in every village; not a family but was called to mourn for its dearest relatives, while the survivors stalked listlessly about, the ghosts of their former selves, among the wrecks of their former homes. The spirit of the nation, within a few months after the arrival of Alva, seemed hopelessly broken. The blood of its best and bravest had already stained the scaffold; men to whom it had been accustomed to look for guidance and protection, were dead, in prison, or in exile. Submission had ceased to be of any avail, flight was impossible, and the spirit of vengeance had alighted at every fireside.

The mourners went daily about the streets, for there was hardly a house which had not been made desolate. The scaffolds, the gallows, the funeral piles which had been sufficient in ordinary times, furnished now an entirely inadequate machinery for the incessant executions. Columns and stakes in every street, the door-posts of private houses, the fences in the fields, were laden with human carcasses, strangled, burned, beheaded. The orchards in the country bore on many a tree the hideous fruit of human bodies. Thus the Netherlands were crushed, and, but for the stringency of the tyranny which had now closed their gates, would have been depopulated."—J. L. Motley, *The Rise of the Dutch Republic*, pt. 3, ch. 1 (v. 2).

A. D. 1568.—Stupendous death-sentence of the Inquisition.—The whole population condemned.—"Early in the year, the most sublime sentence of death was promulgated which has ever been pronounced since the creation of the world. The Roman tyrant wished that his enemies' heads were all upon a single neck, that he might strike them off at a blow; the Inquisition assisted Philip to place the heads of all his Netherland subjects upon a single neck, for the same fell purpose. Upon the 16th February, 1568, a sentence of the Holy Office condemned all the inhabitants of the Netherlands to death as heretics. From this universal doom only a few persons, especially named, were excepted. A proclamation of the King, dated ten days later, confirmed this decree of the Inquisition, and ordered it to be carried into instant execution without regard to age, sex, or condition. This is probably the most concise death-warrant that was ever framed. Three millions of people, men, women, and children, were sentenced to the scaffold in three lines; and as it was well known that these were not harmless thunders, like some bulls of the Vatican, but serious and practical measures which it was intended should be enforced, the horror which they produced may be easily imagined. It was hardly the purpose of Government to compel the absolute completion of the wholesale plan in all its length and breadth, yet in the horrible times upon which they had fallen, the Netherlands might be excused for believing that no measure was too monstrous to be fulfilled. At any rate, it was certain that when all were condemned, any might at a moment's warning be carried to the scaffold, and this was precisely the course adopted by the authorities. . . . Under this new decree, the executions certainly did not slacken. Men in the highest and the humblest positions were daily and hourly dragged to the stake. Alva, in a single letter to Philip, coolly estimated the number of executions which were to take place immediately after the expiration of Holy Week, 'at 800 heads.' Many a citizen, convicted of a hundred thousand florins, and of no other crime, saw himself suddenly tied to a horse's tail, with his hands fastened behind him, and so dragged to the gallows. But although wealth was an unpardonable sin, poverty proved rarely a protection. Reasons sufficient could always be found for dooming the starveling laborer as well as the opulent burgher. To avoid the disturbances created in the streets by the frequent harangues or exhortations addressed to the bystanders by the victims on their way to the scaffold, a new gag was invented. The tongue

of each prisoner was screwed into an iron ring, and then seared with a hot iron. The swelling and inflammation, which were the immediate result, prevented the tongue from slipping through the ring, and of course effectually precluded all possibility of speech."—J. L. Motley, *The Rise of the Dutch Republic*, pt. 3, ch. 2 (v. 2).

A. D. 1568-1572.—The arming of Revolt and beginning of War by the Prince of Orange.—Alva's successes, brutalities, and senseless taxation.—Quarrels with England and destruction of Flemish trade.—"So unprecedented already was the slaughter that even in the beginning of March 1568, when Alva had been scarcely six months in the country, the Emperor Maximilian, himself a Roman Catholic, addressed a formal remonstrance to the king on the subject, as his dignity entitled him to do, since the Netherlands were a part of the Germanic body. It received an answer which was an insult to the remonstrant from its defiance of truth and common sense, and which cut off all hope from the miserable Flemings. Philip declared that what he had done had been done 'for the repose of the Provinces,' . . . and almost on the same day he published a new edict, confirming a decree of the Inquisition which condemned all the inhabitants of the Netherlands to death as heretics, with the exception of a few persons who were named [see above]. . . . In their utter despair, the Flemings implored the aid of the Prince of Orange, who . . . had quitted the country. . . . He was now residing at Dillenburg, in Nassau, in safety from Philip's threats, and from the formal sentence which, in addition to the general condemnation of the whole people, the Council of Blood had just pronounced against him by name. But he resolved that in such an emergency it did not become him to weigh his own safety against the claims his countrymen had on his exertions. After a few weeks energetically spent in levying troops and raising money to maintain them, he published a document which he entitled his 'Justification,' and which stated his own case and that of the Provinces with a most convincing clearness; and at the end of April he took the field at the head of a small force, composed of French Huguenots, Flemish exiles, . . . and German mercenaries. . . . Thus in the spring of 1568 began that terrible war which for 40 years desolated what, in spite of great natural disadvantages, had hitherto been one of the most prosperous countries of Europe. . . . To dwell on many of its details . . . would require volumes. . . . And, indeed, the pitched battles were few. At the outset [May 23, 1568] Count Louis of Nassau, the prince's brother, defeated and slew Count Arenberg, the Spanish governor of the province of Groningen, very nearly on the spot [near the convent of Heiligen-Lee, or the Holy Lion] on which, in the palmy days of Rome, the fierce valor of Arminius had annihilated the legions whose loss was so deeply imprinted on the heart of Augustus; and Alva had avenged the disaster by so complete a rout of Louis at Jemmingen, that more than half of the rebel army was slaughtered on the field, and Louis himself only escaped a capture, which would have delivered him to the scaffold, by swimming the Ems, and escaping with a mere handful of troops, all that were left of his army, into Germany. But after dealing this blow . . . Alva rarely fought a battle in the open field.

He preferred showing the superiority of his generalship by defying the endeavours of the prince and his brothers to bring him to action, miscalculating, indeed, the eventual consequences of such tactics, and believing that the protraction of the war must bring the rebels to his sovereign's feet by the utter exhaustion of their resources; while the event proved that it was Spain which was exhausted by the contest, that kingdom being in fact so utterly prostrated by continued draughting of men and treasure which it involved, that her decay may be dated from the moment when Alva reached the Flemish borders. His career in the Netherlands seemed to show that, warrior though he was, persecution was more to his taste than even victory. Victorious, indeed, he was, so far as never failing to reduce every town which he besieged, and to baffle every design of the prince which he anticipated. . . . Every triumph which he gained was sullied by a ferocious and deliberate cruelty, of which the history of no other general in the world affords a similar example. . . . Whenever Alva captured a town, he himself enjoined his troops to show no mercy either to the garrison or to the peaceful inhabitants. Every atrocity which greed of rapine, wantonness of lust, and blood-thirsty love of slaughter could devise was perpetrated by his express direction. . . . He had difficulties to encounter besides those of his military operations, and such as he was less skilful in meeting. He soon began to be in want of money. A fleet laden with gold and silver was driven by some French privateers into an English harbour, where Elizabeth at once laid her hands on it. If it belonged to her enemies, she had a right, she said, to seize it: if to her friends, to borrow it (she had not quite decided in which light to regard the Spaniards, but the logic was irresistible, and her grasp irremovable), and, to supply the deficiency, Alva had recourse to expedients which injured none so much as himself. To avenge himself on the Queen, he issued a proclamation [March, 1569] forbidding all commercial intercourse between the Netherlands and England; . . . but his prohibition damaged the Flemings more than the English merchants, and in so doing inflicted loss upon himself. . . . For he at the same time endeavoured to compel the States to impose, for his use, a heavy tax on every description of property, on every transfer of property, and even on every article of merchandise [the tenth penny, or ten per cent.] as often as it should be sold: the last impost, in the Provinces which were terrified into consenting to it, so entirely annihilating trade that it even roused the disapproval of his own council; and that, finding themselves supported by that body, even those Provinces which had complied, retracted their assent. . . . After a time [1572] he was forced first to compromise his demands for a far lower sum than that at which he had estimated the produce of his taxes, and at last to renounce even that. He was bitterly disappointed and indignant, and began to be weary of his post."—C. D. Yonge, *Three Centuries of Modern History*, ch. 5.

A. D. 1572.—The Beggars of the Sea and their capture of Brill.—Rapid Revolution in

Holland and Zealand, but wholly in the name of the King and his Stadtholder, William of Orange.—The Provisional Government organized.—In the spring of 1572, Alva having re-established friendly relations with Queen Elizabeth, all the cruisers of the rebellious Netherlands—"Beggars of the Sea" as they had styled themselves—were suddenly expelled from English ports, where they had previously found shelter and procured supplies. The consequence was unexpected to those who brought it about, and proved most favorable to the patriotic cause. Desperately driven by their need of some harbor of refuge, the fleet of these adventurers made an attack upon the important seaport of Brill, took it with little fighting and held it stubbornly. Excited by this success, the patriotic burghers of Flushing, on the isle of Walcheren, soon afterwards rose and expelled the Spanish garrison from their town. "The example thus set by Brill and Flushing was rapidly followed. The first half of the year 1572 was distinguished by a series of triumphs rendered still more remarkable by the reverses which followed at its close. . . . Enkhuizen, the key to the Zuyder Zee, the principal arsenal, and one of the first commercial cities in the Netherlands, rose against the Spanish Admiral, and hung out the banner of Orange on its ramparts. The revolution effected here was purely the work of the people—of the mariners and burghers of the city. Moreover, the magistracy was set aside and the government of Alva repudiated without shedding one drop of blood, without a single wrong to person or property. By the same spontaneous movement, nearly all the important cities of Holland and Zealand raised the standard of him in whom they recognized their deliverer. The revolution was accomplished under nearly similar circumstances everywhere. With one fierce bound of enthusiasm the nation shook off its chain. Oudewater, Dort, Harlem, Leyden, Gorcum, Loewenstein, Gouda, Medenblik, Horn, Alkmaar, Edam, Monnikendam, Purmerende, as well as Flushing, Veer, and Enkhuizen, all ranged themselves under the government of Orange as lawful stadholder for the King. Nor was it in Holland and Zealand alone that the beacon fires of freedom were lighted. City after city in Gelderland, Overijssel, and the See of Utrecht, all the important towns of Friesland, some sooner, some later, some without a struggle, some after a short siege, some with resistance by the functionaries of government, some by amicable compromise, accepted the garrisons of the Prince and formally recognized his authority. Out of the chaos which a long and preternatural tyranny had produced, the first struggling elements of a new and a better world began to appear. . . . Not all the conquests thus rapidly achieved in the cause of liberty were destined to endure, nor were any to be retained without a struggle. The little northern cluster of republics, which had now restored its honor to the ancient Batavian name, was destined, however, for a long and vigorous life. From that bleak isthmus the light of freedom was to stream through many years upon struggling humanity in Europe, a guiding pharos across a stormy sea; and Harlem, Leyden, Alkmaar—names hallowed by deeds of heroism such as have not often illustrated human annals, still breathe as trumpet-tongued and perpetual a defiance to despotism as

Marathon, Thermopylae, or Salamis. A new board of magistrates had been chosen in all the redeemed cities by popular election. They were required to take an oath of fidelity to the King of Spain, and to the Prince of Orange as his stadholder; to promise resistance to the Duke of Alva, the tenth penny, and the Inquisition; 'to support every man's freedom and the welfare of the country; to protect widows, orphans, and miserable persons, and to maintain justice and truth.' *Diedrich Sonoy* arrived on the 2nd June at Enkhuizen. He was provided by the Prince with a commission, appointing him Lieutenant-Governor of North Holland or Waterland. Thus, to combat the authority of Alva, was set up the authority of the King. The stadholderate over Holland and Zealand, to which the Prince had been appointed in 1559, he now reassumed. Upon this fiction reposed the whole provisional polity of the revolted Netherlands. . . . The people at first claimed not an iota more of freedom than was secured by Philip's coronation oath. There was no pretence that Philip was not sovereign, but there was a pretence and a determination to worship God according to conscience, and to reclaim the ancient political 'liberties' of the land. So long as Alva reigned, the Blood Council, the Inquisition, and martial law, were the only codes or courts, and every charter slept. To recover this practical liberty and these historical rights, and to shake from their shoulders a most sanguinary government, was the purpose of William and of the people. No revolutionary standard was displayed. The written instructions given by the Prince to his lieutenant Sonoy were to 'see that the Word of God was preached, without, however, suffering any hindrance to the Roman Church in the exercise of its religion.' . . . The Prince was still in Germany, engaged in raising troops and providing funds.—J. L. Motley, *The Rise of the Dutch Republic*, pt. 3, ch. 6-7 (v. 2).

A. D. 1572-1573.—Capture of Mons by Louis of Nassau and its recovery by the Spaniards.—Spanish massacres at Mechlin, Zutphen and Naarden.—The siege and capture of Haarlem.—"While William of Orange was in Germany, raising money and troops, he still directed the affairs of the Netherlands. His prospects were again brightened by the capture, by his gallant brother Louis of Nassau, of the important city of Mons. . . . This last startling blow forced Alva to immediate action. He at once sent his son, Don Frederic, to lay siege to Mons. Soon after, the Duke of Medina Celi, Alva's successor as governor of the Netherlands [to whom, however, Alva did not surrender his authority], arrived safely with his fleet, but another Spanish squadron fell with its rich treasures into the hands of the rebels. Alva was now so pressed for money that he agreed to abolish the useless tenth-penny tax, if the states-general of the Netherlands would grant him a million dollars a year. He had summoned the states of Holland to meet at the Hague on the 15th of July, but they met at Dort to renounce his authority, at the summons of William of Orange, who had raised an army in Germany, but was without means to secure the necessary three months' payment in advance. While still owing allegiance to the king, the states recognized Orange as stadtholder, empowered him to drive out the Spanish troops, and to maintain religious free-

dom. . . . Treating the Emperor Maximilian's peace orders as useless, the prince marched his army of 24,000 men to the relief of Mons. Most of the Netherland cities on the way accepted his authority, and everything looked favorable for his success, when an unforeseen and terrible calamity occurred. The French king, Charles IX., whose troops had been routed before Mons [by the Spaniards], had promised to furnish further aid to the provinces. Admiral Coligny was to join the forces of Orange with 15,000 men. The frightful massacre of St. Bartholomew in Paris, on the 24th of August, . . . was a terrible blow to the prince. It broke up all his plans. He had reached the neighborhood of Mons, which he was trying to reinforce, when a night attack was made by the Spaniards on his lines, September 11. . . . Obligated to leave his gallant brother Louis to his fate in Mons, Orange narrowly escaped being killed on his retreat. . . . Deserted by the cities that had been so earnest in his cause, sorrowful, but not despairing for his country, William had only his trust in God and his own destiny to sustain him. As Holland was the only province that clung to the hero patriot, he went there expecting and prepared to die for liberty. Louis of Nassau was forced, on the 21st of September, to abandon Mons to the Spaniards, who allowed Noircarmes . . . to massacre and pillage the inhabitants contrary to the terms of surrender. This wretch killed Catholics and Protestants alike, in order to secure their riches for himself. . . . The city of Mechlin, which had refused to admit a garrison of his troops, was even more brutally ravaged by Alva in order to obtain gold. . . . Alva's son, Don Frederic, now proved an apt pupil of his father, by almost literally executing his command to kill every man and burn every house in the city of Zutphen, which had opposed the entrance of the king's troops. The massacre was terrible and complete. The cause of Orange suffered still more by the cowardly flight of his brother-in-law, Count Van den Berg, from his post of duty in the provinces of Gelderland and Overijssel. By this desertion rugged Friesland was also lost to the patriot side. Holland alone held out against the victorious Spaniards. The little city of Naarden at first stoutly refused to surrender, but being weak was obliged to yield without striking a blow. Don Frederic's agent, Julian Romero, having promised that life and property should be spared, the people welcomed him and his soldiers at a grand feast on the 2d of December. Hardly was this over when 500 citizens, who had assembled in the town hall, were warned by a priest to prepare for death. This was the signal for the entrance of the Spanish troops, who butchered every one in the building. They then rushed furiously through the streets, pillaging and then setting fire to the houses. As the inmates came forth, they were tortured and killed by their cruel foes. . . . Alva wrote boastfully to the king that 'they had cut the throats of the burghers and all the garrison, and had not left a mother's son alive.' He ascribed this success to the favor of God in permitting the defence of so feeble a city to be even attempted. . . . As the city of Haarlem was the key to Holland, Don Frederic resolved to capture it at any cost. But the people were so bent upon resistance that they executed two of their magistrates for secretly negotiating with Alva. . . . Ripperda,

the commandant of the Haarlem garrison, cheered soldiers and people by his heroic counsels, and through the efforts of Orange the city was placed under patriot rule. Amsterdam, which was in the enemy's hands, was ten miles distant, across a lake traversed by a narrow causeway, and the prince had erected a number of forts to command the frozen surface. As a thick fog covered the lake in these December days, supplies of men, provisions, and ammunition were brought into the city in spite of the vigilance of the besiegers. The sledges and skates of the Hollanders were very useful in this work. But against Don Frederic's army of 30,000 men, nearly equalling the entire population of Haarlem, the city with its extensive but weak fortifications had only a garrison of about 4,000. The fact that about 300 of these were respectable women, armed with sword, musket, and dagger, shows the heroic spirit of the people. The men were nerved to fresh exertions by these Amazons, who, led by their noble chief, the Widow Kenau Hasselaer, fought desperately by their side, both within and without the works. The banner of this famous heroine, who has been called the Joan of Arc of Haarlem, is now in the City Hall. A vigorous cannonade was kept up against the city for three days, beginning December 18, and men, women, and children worked incessantly in repairing the shattered walls. They even dragged the statues of saints from the churches to fill up the gaps, to the horror of the superstitious Spaniards. The brave burghers repelled their assaults with all sorts of weapons. Burning coals and boiling oil were hurled at their heads, and blazing pitch-hoops were skilfully caught about their necks. Astonished by this terrible resistance, which cost him hundreds of lives, Don Frederic resolved to take the city by siege." On the last day of January, 1573, Don Frederic having considerably shattered an out-work called the ravelin, ordered a midnight assault, and the Spaniards carried the fort. "They mounted the walls expecting to have the city at their mercy. Judge of their amazement to find a new and stronger fort, shaped like a half-moon, which had been secretly constructed during the siege, blazing away at them with its cannon. Before they could recover from their shock, the ravelin, which had been carefully undermined, blew up, and sent them crushed and bleeding into the air. The Spaniards outside, terrified at these outbursts, retreated hastily to their camp, leaving hundreds of dead beneath the walls. Two assaults of veteran soldiers, led by able generals, having been repelled by the dauntless burghers of Haarlem, famine seemed the only means of forcing its surrender. Starvation in fact soon threatened both besiegers and besieged. Don Frederic wished to abandon the contest, but Alva threatened to disown him as a son if he did so. . . . There was soon a struggle for the possession of the lake, which was the only means of conveying supplies to the besieged. In the terrible hand-to-hand fight which followed the grappling of the rival vessels, on the 28th of May, the prince's fleet, under Admiral Brand, was totally defeated. . . . During the month of June the wretched people of Haarlem had no food but linseed and rapeseed, and they were soon compelled to eat dogs, cats, rats, and mice. When these gave out they devoured shoe-leather and the boiled hides of horses and oxen, and tried to

allay the pangs of hunger with grass and weeds. The streets were full of the dead and the dying." Attempts at relief by Orange were defeated. "As a last resort the besieged resolved to form a solid column, with the women and children, the aged and infirm, in the centre, to fight their way out; but Don Frederic, fearing the city would be left in ruins, induced them to surrender on the 12th of July, under promise of mercy. This promise was cruelly broken by a frightful massacre of 2,000 people, which gave great joy to Alva and Philip."—A. Young, *Hist. of the Netherlands*, ch. 10-11.

A. D. 1573-1574.—Siege and deliverance of Alkmaar.—Displacement of Alva.—Battle of Mookerhyde and death of Louis of Nassau.—Siege and relief of Leyden.—The flooding of the land.—Founding of Leyden University.—After the surrender of Haarlem, a mutiny broke out among the Spanish troops that had been engaged in the siege, to whom 28 months' arrears of pay were due. "It was appeased with great difficulty at the end of seven weeks, when Alva determined to make a decisive attack on Holland both by land and water, and with this view commanded his son, Don Frederic di Toledo, to march to the siege of Alkmaar, and repaired in person to Amsterdam. . . . Don Frederic laid siege to Alkmaar at the head of 16,000 able and efficient troops; within the town were 1,300 armed burghers and 800 soldiers, as many perhaps as it was at that time capable of containing. With this handful of men the citizens of Alkmaar defended themselves no less resolutely than the Haarlemmers had done. The fierce onslaughts of the Spaniards were beaten back with uniform success on the part of the besieged; the women and girls were never seen to shrink from the fight, even where it was hottest, but unceasingly supplied the defenders with stones and burning missiles, to throw amongst their enemies. . . . But as there were no means of conveying reinforcements to the besieged from without, and their supplies began to fail, they resolved, after a month's siege, on the desperate measure of cutting through the dykes. Some troops sent by Sonnoy having effected this, and opened the sluices, the whole country was soon deluged with water. Don Frederic, astounded at this novel mode of warfare, and fearing that himself and his whole army would be drowned, broke up his camp in haste, and fled, rather than retreated, to Amsterdam. It seemed almost as though the blessing which the Prince of Orange had promised his people had come upon them. The capture of Geertruydenberg, about this time, by one of his lieutenants, was followed by a naval victory, as signal as it was important. The Admiral Bossu, to whom was given the command of the [Spanish] fleet at Amsterdam, having sailed through the Pampus with the design of occupying the Zuyderzee, and thus making himself master of the towns of North Holland, encountered the fleet of those towns, consisting of 24 vessels, commanded by Admiral Dirkson, stationed in the Zuyderzee to await his arrival." After several days of skirmishing, the Dutch fleet forced a close fight, "which lasted with little intermission from the afternoon of the 11th of October to midday of the 12th, during which time two of the royalist ships were sunk and a

third captured." The remainder fled or surrendered, Bossu, himself, being taken prisoner. "On intelligence of the issue of the battle, Alva quitted Amsterdam in haste and secrecy. This success delivered the towns of North Holland from the most imminent danger, and rendered the possession of Amsterdam nearly useless to the royalists." Alva was now forced to call a meeting of the states-general, in the hope of obtaining a vote of money. "Upon their assembling at Brussels, the states of Holland despatched an earnest and eloquent address, exhorting them to emancipate themselves from Spanish slavery and the cruel tyranny of Alva, which the want of unanimity in the provinces had alone enabled him to exercise. . . . Their remonstrance appears to have been attended with a powerful effect, since the states-general could neither by threats or remonstrances be induced to grant the smallest subsidy. . . . Alva, having become heartily weary of the government he had involved in such irretrievable confusion, now obtained his recall; his place was filled by Don Louis de Requesens, grand commander of Castile. In the November of this year, Alva quitted the Netherlands, leaving behind him a name which has become a bye-word of hatred, scorn, and execration. . . . During the six years that he had governed the Netherlands, 18,000 persons had perished by the hand of the executioner, besides the numbers massacred at Naarden, Zutphen, and other conquered cities." The first undertaking of the new governor was an attempt to raise the siege of Middleburg, the Spanish garrison in which had been blockaded by the Gueux for nearly two years; but the fleet of 40 ships which he fitted out for the purpose was defeated, at Romers-waale, with a loss of ten vessels. "The surrender of Middleburg immediately followed, and with it that of Arnhem, which put the Gueux in possession of the principal islands of Zealand, and rendered them masters of the sea." But these successes were counterbalanced by a disaster which attended an expedition led from Germany by Louis of Nassau, the gallant but unfortunate brother of the Prince of Orange. His army was attacked and utterly destroyed by the Spaniards (April 14, 1574) at the village of Mookerheyde, or Mook, near Nimeguen, and both Louis and his brother Henry of Nassau were slain. "After raising the siege of Alkmaar, the Spanish forces, placed under the command of Francesco di Valdez on the departure of Don Frederic di Toledo, had for some weeks blockaded Leyden; but were recalled in the spring of this year to join the rest of the army on its march against Louis of Nassau. From that time the burghers of Leyden . . . had not only neglected to lay up any fresh stores of corn or other provision, but to occupy or destroy the forts with which the enemy had encompassed the town. This fact coming to the knowledge of Don Louis, he once more despatched Valdez to renew the siege at the head of 8,000 troops. . . . Mindful of Haarlem and Alkmaar, the Spanish commander . . . brought no artillery, nor made any preparations for assault, but, well aware that there were not provisions in the town sufficient for three months, contented himself with closely investing it on all sides, and determined to await the slow but sure effects of famine." In this emergency, the States of Holland "decreed that all the dykes between Leyden

and the Meuse and Yssel should be cut through, and the sluices opened at Rotterdam and Schiedam, by which the waters of those rivers, overflowing the valuable lands of Schieland and Rhynland, would admit of the vessels bringing succours up to the very gates of Leyden. The damage was estimated at 600,000 guilders. . . . The cutting through the dykes was a work of time and difficulty, as well from the labour required as from the continual skirmishes with the enemy. . . . Even when completed, it appeared as if the vast sacrifice were utterly unavailing. A steady wind blowing from the north-east kept back the waters. . . . Meanwhile the besieged, who for some weeks heard no tidings of their deliverers, had scarcely hope left to enable them to sustain the appalling sufferings they endured. . . . 'Then,' says the historian, who heard it from the mouths of the sufferers, 'there was no food so odious but it was esteemed a dainty.' . . . The siege had now lasted five months. . . . Not a morsel of food, even the most filthy and loathsome, remained . . . when, on a sudden, the wind veered to the north-west, and thence to the south-west; the waters of the Meuse rushed in full tide over the land, and the ships rode triumphantly on the waves. The Gueux, attacking with vigour the forts on the dykes, succeeded in driving out the garrisons with considerable slaughter. . . . On the . . . 3rd of October . . . Valdez evacuated all the forts in the vicinity. . . . In memory of this eventful siege, the Prince and States offered the inhabitants either to found an university or to establish a fair. They chose the former; but the States . . . granted both: the fair of Leyden was appointed to be held on the 1st of October in every year, the 3rd being ever after held as a solemn festival; and on the 8th of February in the next year, the university received its charter from the Prince of Orange in the name of King Philip. Both proved lasting monuments."—C. M. Davies, *Hist. of Holland*, pt. 2, ch. 8-9 (v. 1-2).

A. D. 1575-1577. —Congress at Breda.—Offer of sovereignty to the English Queen.—Death of Requesens.—Mutiny of the Soldiery.—The Spanish Fury.—Alliance of Northern and Southern provinces under the Pacification of Ghent and the Union of Brussels.—Arrival of Don John of Austria.—"The bankrupt state of Philip II.'s exchequer, and the reverses which his arms had sustained, induced him to accept . . . the proffered mediation of the Emperor Maximilian, which he had before so arrogantly rejected, and a Congress was held at Breda from March till June 1575. But the insurgents were suspicious, and Philip was inflexible; he could not be induced to dismiss his Spanish troops, to allow the meeting of the States-General, or to admit the slightest toleration in matters of religion; and the contest was therefore renewed with more fury than ever. The situation of the patriots became very critical when the enemy, by occupying the islands of Duyveland and Schouwen, cut off the communication between Holland and Zealand; especially as all hope of succour from England had expired. Towards the close of the year envoys were

despatched to solicit the aid of Elizabeth, and to offer her, under certain conditions, the sovereignty of Holland and Zealand. Requesens sent Champagne to counteract these negotiations, which ended in nothing. The English Queen was afraid of provoking the power of Spain, and could not even be induced to grant the Hollanders a loan. The attitude assumed at that time by the Duke of Alençon, in France, also prevented them from entering into any negotiations with that Prince. In these trying circumstances, William the Silent displayed the greatest firmness and courage. It was now that he is said to have contemplated abandoning Holland and seeking with its inhabitants a home in the New World, having first restored the country to its ancient state of a waste of waters; a thought, however, which he probably never seriously entertained, though he may have given utterance to it in a moment of irritation or despondency. . . . The unexpected death of Requesens, who expired of a fever, March 5th 1576, after a few days' illness, threw the government into confusion. Philip II. had given Requesens a *carte blanche* to name his successor, but the nature of his illness had prevented him from filling it up. The government therefore devolved to the Council of State, the members of which were at variance with one another; but Philip found himself obliged to intrust it 'ad interim' with the administration, till a successor to Requesens could be appointed. Count Mansfeld was made commander-in-chief, but was totally unable to restrain the licentious soldiery. The Spaniards, whose pay was in arrear, had now lost all discipline. After the raising of the siege of Leyden they had beset Utrecht and pillaged and maltreated the inhabitants, till Valdez contrived to furnish their pay. No sooner had Requesens expired than they broke into open mutiny, and acted as if they were entire masters of the country. After wandering about some time and threatening Brussels, they seized and plundered Alost, where they established themselves; and they were soon afterwards joined by the Walloon and German troops. To repress their violence, the Council of State restored to the Netherlands the arms of which they had been deprived, and called upon them by a proclamation to repress force by force; but these citizen-soldiers were dispersed with great slaughter by the disciplined troops in various encounters. Ghent, Utrecht, Valenciennes, Maestricht were taken and plundered by the mutineers; and at last the storm fell upon Antwerp, which the Spaniards entered early in November, and sacked during three days. More than 1,000 houses were burnt, 8,000 citizens are said to have been slain, and enormous sums in ready money were plundered. The whole damage was estimated at 24,000,000 florins. The horrible excesses committed in this sack procured for it the name of the 'Spanish Fury.' The government was at this period conducted in the name of the States of Brabant. On the 5th of September, De Hèze, a young Brabant gentleman who was in secret intelligence with the Prince of Orange, had, at the head of 500 soldiers, entered the palace where the Council of State was assembled, and seized and imprisoned the members. William, taking advantage of the alarm created at Brussels by the sack of Antwerp, persuaded the provisional government to summon the States-General, although such a

course was at direct variance with the commands of the King. To this assembly all the provinces except Luxemburg sent deputies. The nobles of the southern provinces, although they viewed the Prince of Orange with suspicion, feeling that there was no security for them so long as the Spanish troops remained in possession of Ghent, sought his assistance in expelling them; which William consented to grant only on condition that an alliance should be effected between the northern and the southern, or Catholic provinces of the Netherlands. This proposal was agreed to, and towards the end of September Orange sent several thousand men from Zealand to Ghent, at whose approach the Spaniards, who had valorously defended themselves for two months under the conduct of the wife of their absent general Mondragon, surrendered, and evacuated the citadel. The proposed alliance was now converted into a formal union by the treaty called the Pacification of Ghent, signed November 8th 1576; by which it was agreed, without waiting for the sanction of Philip, whose authority however was nominally recognised, to renew the edict of banishment against the Spanish troops, to procure the suspension of the decrees against the Protestant religion, to summon the States-General of the northern and southern provinces, according to the model of the assembly which had received the abdication of Charles V., to provide for the toleration and practise of the Protestant religion in Holland and Zealand, together with other provisions of a similar character. About the same time with the Pacification of Ghent, all Zealand, with the exception of the island of Tholen, was recovered from the Spaniards. . . . It was a mistake on the part of Philip II. to leave the country eight months with only an 'ad interim' government. Had he immediately filled up the vacancy . . . the States could not have seized upon the government, and the alliance established at Ghent would not have been effected, by which an almost independent commonwealth had been erected. But Philip seems to have been puzzled as to the choice of a successor; and his selection, at length, of his brother Don John of Austria [a natural son of Charles V.], caused a further considerable delay. . . . The state of the Netherlands compelled Don John to enter them, not with the pomp and dignity becoming the lawful representative of a great monarch, but stealthily, like a traitor or conspirator. In Luxemburg alone, the only province which had not joined the union, could he expect to be received; and he entered its capital a few days before the publication of the treaty of Ghent, in the disguise of a Moorish slave, and in the train of Don Ottavio Gonzaga, brother of the Prince of Melfi. Having neither money nor arms, he was obliged to negotiate with the provincial government in order to procure the recognition of his authority. At the instance of the Prince of Orange, the States insisted on the withdrawal of the Spanish troops, the maintenance of the treaty of Ghent, an act of amnesty for past offences, the convocation of the States-General, and an oath from Don John that he would respect all the charters and customs of the country. The new governor was violent, but the States were firm, and in January 1577 was formed the Union of Brussels, the professed objects of which were, the immediate expulsion of the Spaniards, and the execution of the Pacifica-

tion of Ghent; while at the same time the Catholic religion and the royal authority were to be upheld. This union, which was only a more popular repetition of the treaty of Ghent, soon obtained numberless signatures. . . . Meanwhile Rodolph II., the new Emperor of Germany, had offered his mediation, and appointed the Bishop of Liège to use his good offices between the parties; who, with the assistance of Duke William of Juliers, brought, or seemed to bring, the new governor to a more reasonable frame of mind. . . . Don John yielded all the points in dispute, and embodied them in what was called the Perpetual Edict, published March 12th, 1577. The Prince of Orange suspected from the first that these concessions were a mere deception."—T. H. Dyer, *Hist. of Modern Europe*, bk. 3, ch. 7-9 (v. 2).

A. D. 1577-1581.—The administration of Don John.—Orange's well-founded distrust.—Emancipation of Antwerp.—Battle of Gemblours.—Death of Don John and appointment of Parma.—Corruption of Flemish nobles.—Submission of the Walloon provinces.—Pretensions of the Duke of Anjou.—Constitution and declared independence of the Dutch Republic.—"It now seemed that the Netherlands had gained all they asked for, and that everything for which they had contended had been conceded. The Blood Council of Alva had almost extirpated the Reformers, and an overwhelming majority of the inhabitants of the Low Countries, with the exception of the Hollanders and Zelanders, belonged to the old Church, provided the Inquisition was done away with, and a religious peace was accorded. But Don John had to reckon with the Prince of Orange. In him William had no confidence. He could not forget the past. He believed that the signatures and concessions of the governor and Philip were only expedients to gain time, and that they would be revoked or set aside as soon as it was convenient or possible to do so. . . . He had intercepted letters from the leading Spaniards in Don John's employment, in which, when the treaty was in course of signature, designs were disclosed of keeping possession of all the strong places in the country, with the object of reducing the patriots in detail. . . . Above all, William distrusted the Flemish nobles. He knew them to be greedy, fickle, treacherous, ready to betray their country for personal advantage, and to ally themselves blindly with their natural enemies. . . . As events proved, Orange was in the right. Hence he refused to recognize the treaty in his own states of Holland and Zealand. As soon as it was published and sent to him, William, after conference with these states, published a severe criticism on its provisions. . . . In all seeming however Don John was prepared to carry out his engagements. He got together with difficulty the funds for paying the arrears due to the troops, and sent them off by the end of April. He caressed the people and he bribed the nobles. He handed over the citadels to Flemish governors, and entered Brussels on May 1st. Everything pointed to success and mutual good will. But we have Don John's letters, in which he speaks most unreservedly and most unflatteringly of his new friends, and of his designs on the liberties of the Netherlands. And

all the while that Philip was soothing and flattering his brother, he had determined on ruining him, and on murdering the man [Escovedo] whom that brother loved and trusted. About this time, too, we find that Philip and his deputy were casting about for the means by which they might assassinate the Prince of Orange, 'who had bewitched the whole people!' An attempt of Don John to get possession of the citadel of Antwerp for himself failed, and the patriots gained it. The merchants of Antwerp agreed to find the pay still owing to the soldiers, on condition of their quitting the city. But while they were discussing the terms, a fleet of Zealand vessels came sailing up the Scheldt. Immediately a cry was raised, 'The Beggars are coming,' and the soldiers fled in dismay [August 1, 1577]. Then the Antwerpers demolished the citadel, and turned the statue of Alva again into cannon. After these events, William of Orange put an end to negotiations with Don John. Prince William was in the ascendant. But the Catholic nobles conspired against him, and induced the Archduke Matthias, brother of the German Emperor Rodolph, to accept the place of governor of the Netherlands in lieu of Don John. He came, but Orange was made the Ruwaard of Brabant, with full military power. It was the highest office which could be bestowed on him. The 'Union of Brussels' followed and was a confederation of all the Netherlands. But the battle of Gemblours was fought in February, 1578, and the patriots were defeated. Many small towns were captured, and it seemed that in course of time the governor would recover at least a part of his lost authority. But in the month of September, Don John was seized with a burning fever, and died on October 1st. . . . The new governor of the Netherlands, son of Ottavio Farnese, Prince of Parma, and of Margaret of Parma, sister of Philip of Spain, was a very different person from any of the regents who had hitherto controlled the Netherlands. He was, or soon proved himself to be, the greatest general of the age, and he was equally, according to the statesmanship of the age, the most accomplished and versatile statesman. He had no designs beyond those of Philip, and during his long career in the Netherlands, from October, 1578, to December, 1592, he served the King of Spain as faithfully and with as few scruples as Philip could have desired. . . . Parma was religious, but he had no morality whatever. . . . He had no scruple in deceiving, lying, assassinating, and even less scruple in saying or swearing that he had done none of these things. . . . He had an excellent judgment of men, and indeed he had experience of the two extremes, of the exceeding baseness of the Flemish nobles, and of the lofty and pure patriotism of the Dutch patriots. Nothing indeed was more unfortunate for the Dutch than the belief which they entertained, that the Flemings who had been dragooned into uniformity, could be possibly stirred to patriotism. Alva had done his work thoroughly. It is possible to extirpate a reformation. But the success of the process is the moral ruin of those who are the subjects of the experiment. Fortunately for Parma, there was a suitor for the Netherland sovereignty, in the person of the very worst prince of the very worst royal family that ever existed in Europe, i. e., the Duke of Anjou, of

the house of Valois [see FRANCE: A. D. 1577-1578]. This person was favoured by Orange, probably because he had detected Philip's designs on France, and thought that national jealousy would induce the French government, which was Catherine of Medici, to favour the low countries. Besides, Parma had a faction in every Flemish town, who were known as the Malcontents, who were the party of the greedy and unscrupulous nobles. And, besides Anjou, there was the party of another pretender, John Casimir, of Poland. He, however, soon left them. Parma quickly found in such dissensions plenty of men whom he could usefully bribe. He made his first purchases in the Walloon district, and secured them. The provinces here were Artois, Hainault, Lille, Douay, and Orchies. They were soon permanently reunited to Spain. On January 29, 1579, the Union of Utrecht, which was virtually the Constitution of the Dutch Republic, was agreed to. It was greater in extent on the Flemish side than the Dutch Republic finally remained, less on that of Friesland [comprising Holland, Zealand, Gelderland, Zutphen, Utrecht, and the Frisian provinces]. Orange still had hopes of including most of the Netherland seaboard, and he still kept up the form of allegiance to Philip. The principal event of the year was the siege and capture of Maastricht [with the slaughter of almost its entire population of 34,000]. . . . Mechlin also was betrayed by its commander, De Bours, who reconciled himself to Romanism, and received the pay for his treason from Parma at the same time. In March, 1580, a similar act of treason was committed by Count Renneberg, the governor of Friesland, who betrayed its chief city, Groningen. . . . In the same year, 1580, was published the ban of Philip. This instrument, drawn up by Cardinal Granvelle, declared Orange to be a traitor and miscreant, made him an outlaw, put a heavy price on his head (25,000 gold crowns), offered the assassin the pardon of any crime, however heinous, and nobility, whatever be his rank. . . . William answered the ban by a vigorous appeal to the civilized world. . . . Renneberg, the traitor, laid siege to Steenwyk, the principal fortress of Drenthe, at the beginning of 1581. . . . In February, John Norris, the English general, . . . relieved the town. Renneberg raised the siege, was defeated in July by the same Norris, and died, full of remorse, a few days afterwards. But the most important event in 1581 was the declaration of Dutch Independence formally issued at the Hague on the 26th of July. By this instrument, Orange, though most unwillingly, felt himself obliged to accept the sovereignty over Holland and Zealand, and whatever else of the seven provinces was in the hands of the patriots. The Netherlands were now divided into three portions. The Walloon provinces in the south were reconciled to Philip and Parma. The middle provinces were under the almost nominal sovereignty of Anjou, the northern were under William. . . . Philip's name was now discarded from public documents . . . ; his seal was broken, and William was thereafter to conduct the government in his own name. The instrument was styled an 'Act of Abjuration.'—J. E. T. Rogers, *The Story of Holland*, ch. 11-12.

W. Stirling-Maxwell, *Don John of Austria*, v. 2, ch. 8-10.

A. D. 1581-1584.—Refusal of the sovereignty of the United Provinces by Orange.—Its bestowal upon the Duke of Anjou.—Base treachery of Anjou.—The "French Fury" at Antwerp.—Assassination of the Prince of Orange.—"What, then, was the condition of the nation, after this great step [the Act of Abjuration] had been taken? It stood, as it were, with its sovereignty in its hand, dividing it into two portions, and offering it, thus separated, to two distinct individuals. The sovereignty of Holland and Zealand had been reluctantly accepted by Orange. The sovereignty of the United Provinces had been offered to Anjou, but the terms of agreement with that Duke had not yet been ratified. The movement was therefore triple, consisting of an abjuration and of two separate elections of hereditary chiefs; these two elections being accomplished in the same manner by the representative bodies respectively of the united provinces and of Holland and Zealand. . . . Without a direct intention on the part of the people or its leaders to establish a republic, the Republic established itself. Providence did not permit the whole country, so full of wealth, intelligence, healthy political action—so stocked with powerful cities and an energetic population, to be combined into one free and prosperous commonwealth. The factious ambition of a few grantees, the cynical venality of many nobles, the frenzy of the Ghent democracy, the spirit of religious intolerance, the consummate military and political genius of Alexander Farnese, the exaggerated self-abnegation and the tragic fate of Orange, all united to disserve this group of flourishing and kindred provinces. The want of personal ambition on the part of William the Silent inflicted, perhaps, a serious damage upon his country. He believed a single chief requisite for the united states; he might have been, but always refused to become that chief; and yet he has been held up for centuries by many writers as a conspirator and a self-seeking intriguer. . . . 'These provinces,' said John of Nassau, 'are coming very unwillingly into the arrangement with the Duke of Alençon [soon afterwards made Duke of Anjou]. The majority feel much more inclined to elect the Prince, who is daily, and without intermission, implored to give his consent. . . . He refuses only on this account—that it may not be thought that, instead of religious freedom for the country, he has been seeking a kingdom for himself and his own private advancement. Moreover, he believes that the connexion with France will be of more benefit to the country and to Christianity.' . . . The unfortunate negotiations with Anjou, to which no man was more opposed than Count John, proceeded therefore. In the meantime, the sovereignty over the united provinces was provisionally held by the national council, and, at the urgent solicitation of the states-general, by the Prince. The Archduke Matthias, whose functions were most unceremoniously brought to an end by the transactions which we have been recording, took his leave of the states, and departed in the month of October. . . . Thus it was arranged that, for the present, at least, the Prince should exercise sovereignty over Holland and Zealand; although he had himself used his

utmost exertions to induce those provinces to join the rest of the United Netherlands in the proposed election of Anjou. This, however, they sternly refused to do. There was also a great disinclination felt by many in the other states to this hazardous offer of their allegiance, and it was the personal influence of Orange that eventually carried the measure through. . . . By midsummer [1581] the Duke of Anjou made his appearance in the western part of the Netherlands. The Prince of Parma had recently come before Cambray with the intention of reducing that important city. On the arrival of Anjou, however, . . . Alexander raised the siege precipitately and retired towards Tournay," to which he presently laid siege, and which was surrendered to him in November.—J. L. Motley, *The Rise of the Dutch Republic*, pt. 6, ch. 4-5 (v. 3).—Meantime, the Duke of Anjou had visited England, paying court to Queen Elizabeth, whom he hoped to marry, but who declined the alliance after making the acquaintance of her suitor. "Elizabeth made all the reparation in her power, by the honours paid him on his dismissal. She accompanied him as far as Canterbury, and sent him away under the convoy of the earl of Leicester, her chief favourite; and with a brilliant suite and a fleet of fifteen sail. Anjou was received at Antwerp with equal distinction; and was inaugurated there on the 19th of February [1582] as Duke of Brabant, Lothier, Limbourg, and Guelders, with many other titles, of which he soon proved himself unworthy. . . . During the rejoicings which followed this inauspicious ceremony, Philip's proscription against the Prince of Orange put forth its first fruits. The latter gave a grand dinner in the château of Antwerp, which he occupied, on the 18th of March, the birth-day of the duke of Anjou." As he quitted the dining hall, he was shot in the cheek by a young man who approached him with the pretence of offering a petition, and who proved to be the tool of a Spanish merchant at Antwerp, with whom Philip of Spain had contracted for the procurement of the assassination. The wound inflicted was severe but not fatal. "Within three months, William was able to accompany the duke of Anjou in his visits to Ghent, Bruges, and the other chief towns of Flanders; in each of which the ceremony of inauguration was repeated. Several military exploits now took place [the most important of them being the capture of Oudenarde, after a protracted siege, by the Prince of Parma]. . . . The duke of Anjou, intemperate, inconstant, and unprincipled, saw that his authority was but the shadow of power. . . . The French officers, who formed his suite and possessed all his confidence, had no difficulty in raising his discontent into treason against the people with whom he had made a solemn compact. The result of their councils was a deep-laid plot against Flemish liberty; and its execution was ere-long attempted. He sent secret orders to the governors of Dunkirk, Bruges, Termonde, and other towns, to seize on and hold them in his name; reserving for himself the infamy of the enterprise against Antwerp. To prepare for its execution, he caused his numerous army of French and Swiss to approach the city." Then, on the 17th of January, 1583, with his body guard of 200 horse, he suddenly attacked and slew the Flemish guards at one of the gates and admitted

the troops waiting outside. "The astonished but intrepid citizens, recovering from their confusion, instantly flew to arms. All differences in religion or politics were forgotten in the common danger to their freedom. . . . The ancient spirit of Flanders seemed to animate all. Workmen, armed with the instruments of their various trades, started from their shops and flung themselves upon the enemy. . . . The French were driven successively from the streets and ramparts. . . . The duke of Anjou saved himself by flight, and reached Termonde. His loss in this base enterprise [known as the French Fury] amounted to 1,500; while that of the citizens did not exceed 80 men. The attempts simultaneously made on the other towns succeeded at Dunkirk and Termonde; but all the others failed. The character of the Prince of Orange never appeared so thoroughly great as at this crisis. With wisdom and magnanimity rarely equalled and never surpassed, he threw himself and his authority between the indignation of the country and the guilt of Anjou; saving the former from excess and the latter from execration. The disgraced and discomfited duke proffered to the states excuses as mean as they were hypocritical. . . . A new treaty was negotiated, confirming Anjou in his former station, with renewed security against any future treachery on his part. He in the mean time retired to France," where he died, June 10, 1584. Exactly one month afterwards (July 10), Prince William was murdered, in his house, at Delft, by Balthazar Gerard, one of the many assassins whom Philip II. and Parma had so persistently sent against him. He was shot as he placed his foot upon the first step of the great stair in his house, after dining in a lower apartment, and he died in a few moments.—T. C. Grattan, *Hist. of the Netherlands*, ch. 13.

A. D. 1584-1585.—Limits of the United Provinces and the Spanish Provinces.—The Republican constitution of the United Provinces, and the organization of their government.—Disgraceful surrender of Ghent.—Practical recovery of Flanders and Brabant by the Spanish king.—At the time of the assassination of the Prince of Orange, "the limit of the Spanish or 'obedient' Provinces, on the one hand, and of the United Provinces on the other, cannot . . . be briefly and distinctly stated. The memorable treason—or, as it was called, the 'reconciliation' of the Walloon Provinces in the year 1583-4—had placed the Provinces of Hainault, Arthois, Douay, with the flourishing cities, Arras, Valenciennes, Lille, Tournay, and others—all Celtic Flanders, in short—in the grasp of Spain. Cambray was still held by the French governor, Seigneur de Balagny, who had taken advantage of the Duke of Anjou's treachery to the States, to establish himself in an unrecognized but practical petty sovereignty, in defiance both of France and Spain; while East Flanders and South Brabant still remained a disputed territory, and the immediate field of contest. With these limitations, it may be assumed, for general purposes, that the territory of the United States was that of the modern Kingdom of the Netherlands, while the obedient Provinces occupied what is now the territory of Belgium. . . .

What now was the political position of the United Provinces at this juncture? The sovereignty which had been held by the Estates, ready to be conferred respectively upon Anjou and Orange, remained in the hands of the Estates. There was no opposition to this theory. . . . The people, as such, claimed no sovereignty. . . . What were the Estates? . . . The great characteristic of the Netherland government was the municipality. Each Province contained a large number of cities, which were governed by a board of magistrates, varying in number from 20 to 40. This college, called the *Vroedschap* (Assembly of Sages), consisted of the most notable citizens, and was a self-electing body—a close corporation—the members being appointed for life, from the citizens at large. Whenever vacancies occurred from death or loss of citizenship, the college chose new members—sometimes immediately, sometimes by means of a double or triple selection of names, the choice of one from among which was offered to the *stadtholder* [governor, or sovereign's deputy] of the province. This functionary was appointed by the Count, as he was called, whether Duke of Bavaria or of Burgundy, Emperor, or King. After the abjuration of Philip [1581], the governors were appointed by the Estates of each Province. The Sage-Men chose annually a board of senators, or *schepens*, whose functions were mainly judicial; and there were generally two, and sometimes three, *burgomasters*, appointed in the same way. This was the popular branch of the Estates. But, besides this body of representatives, were the nobles, men of ancient lineage and large possessions, who had exercised, according to the general feudal law of Europe, high, low, and intermediate jurisdiction upon their estates, and had long been recognized as an integral part of the body politic, having the right to appear, through delegates of their order, in the provincial and in the general assemblies. Regarded as a machine for bringing the most decided political capacities into the administration of public affairs, and for organizing the most practical opposition to the system of religious tyranny, the Netherland constitution was a healthy, and, for the age, an enlightened one. . . . Thus constituted was the commonwealth upon the death of William the Silent. The gloom produced by that event was tragical. Never in human history was a more poignant and universal sorrow for the death of any individual. The despair was, for a brief season, absolute; but it was soon succeeded by more lofty sentiments. . . . Even on the very day of the murder, the Estates of Holland, then sitting at Delft, passed a resolution 'to maintain the good cause, with God's help, to the uttermost, without sparing gold or blood.' . . . The next movement, after the last solemn obsequies had been rendered to the Prince, was to provide for the immediate wants of his family. For the man who had gone into the revolt with almost royal revenues, left his estate so embarrassed that his carpets, tapestries, household linen—nay, even his silver spoons, and the very clothes of his wardrobe—were disposed of at auction for the benefit of his creditors. He left eleven children—a son and daughter by the first wife, a son and daughter by Anna of Saxony, six daughters by Charlotte of Bourbon, and an infant, Frederic Henry, born six months before his death. The

eldest son, Philip William, had been a captive in Spain for seventeen years, having been kidnapped from school, in Leyden, in the year 1567. He had already become . . . thoroughly Hispaniolized under the masterly treatment of the King and the Jesuits. . . . The next son was Maurice, then 17 years of age. . . . Grandson of Maurice of Saxony, whom he resembled in visage and character, he was summoned by every drop of blood in his veins to do life-long battle with the spirit of Spanish absolutism, and he was already girding himself for his life's work. . . . Very soon afterwards the States General established a State Council, as a provisional executive board, for the term of three months, for the Provinces of Holland, Zeeland, Utrecht, Friesland, and such parts of Flanders and Brabant as still remained in the Union. At the head of this body was placed young Maurice, who accepted the responsible position, after three days' deliberation. . . . The Council consisted of three members from Brabant, two from Flanders, four from Holland, three from Zeeland, two from Utrecht, one from Mechlin, and three from Friesland—eighteen in all. They were empowered and enjoined to levy troops by land and sea, and to appoint naval and military officers; to establish courts of admiralty, to expend the moneys voted by the States, to maintain the ancient privileges of the country, and to see that all troops in service of the Provinces made oath of fidelity to the Union. Diplomatic relations, questions of peace and war, the treaty-making power, were not entrusted to the Council, without the knowledge and consent of the States General, which body was to be convoked twice a year by the State Council. . . . Alexander of Parma . . . was swift to take advantage of the calamity which had now befallen the rebellious Provinces. . . . In Holland and Zeeland the Prince's blandishments were of no avail. . . . In Flanders and Brabant the spirit was less noble. Those provinces were nearly lost already. Bruges [which had made terms with the King early in 1584] seconded Parma's efforts to induce its sister-city Ghent to imitate its own baseness in surrendering without a struggle; and that powerful, turbulent, but most anarchical little commonwealth was but too ready to listen to the voice of the tempter. . . . Upon the 17th August [1584] Dendermonde surrendered. . . . Upon the 7th September Vilvoorde capitulated, by which event the water-communication between Brussels and Antwerp was cut off. Ghent, now thoroughly disheartened, treated with Parma likewise; and upon the 17th September made its reconciliation with the King. The surrender of so strong and important a place was as disastrous to the cause of the patriots as it was disgraceful to the citizens themselves. It was, however, the result of an intrigue which had been long spinning. . . . The noble city of Ghent—then as large as Paris, thoroughly surrounded with moats, and fortified with bulwarks, ravelins, and counterscarps, constructed of earth, during the previous two years, at great expense, and provided with bread and meat, powder and shot, enough to last a year—was ignominiously surrendered. The population, already a very reduced and slender one for the great extent of the place and its former importance, had been estimated at 70,000. The number of houses was 35,000, so that, as the inhabitants were soon

farther reduced to one-half, there remained but one individual to each house. On the other hand, the 25 monasteries and convents in the town were repopled. . . . The fall of Brussels was deferred till March, and that of Mechlin (19th July, 1585), and of Antwerp [see below] (19th August, 1585), till Midsommer of the following year; but the surrender of Ghent foreshadowed the fate of Flanders and Brabant. Ostend and Sluys, however, were still in the hands of the patriots, and with them the control of the whole Flemish coast. The command of the sea was destined to remain for centuries with the new republic."—J. L. Motley, *Hist. of the United Netherlands*, ch. 1 (v. 1).

A. D. 1584-1585.—The Siege and surrender of Antwerp.—Decay of the city.—"After the fall of Ghent, Farnese applied himself earnestly to the siege of Antwerp, one of the most memorable recorded in history. The citizens were animated in their defence by the valour and talent of Ste Aldegonde. It would be impossible to detail with minuteness in this general history the various contrivances resorted to on either side for the attack and the defence; and we must therefore content ourselves with briefly adverting to that stupendous monument of Farnese's military genius, the bridge which he carried across the Scheldt, below Antwerp, in order to cut off the communication of the city with the sea and the maritime provinces. From the depth and wideness of the river, the difficulty of finding the requisite materials, and of transporting them to the place selected in the face of an enemy that was superior on the water, the project was loudly denounced by Farnese's officers as visionary and impracticable; yet in spite of all these discouragements and difficulties, as the place seemed unapproachable in the usual way, he steadily persevered, and at last succeeded in an undertaking which, had he failed, would have covered him with perpetual ridicule. The spot fixed upon for the bridge was between Ordam and Kalloo, where the river is both shallower and narrower than at other parts. The bridge consisted of piles driven into the water to such distance as its depth would allow; which was 200 feet on the Flanders side and 900 feet on that of Brabant. The interval between the piles, which was 12 feet broad, was covered with planking; but at the extremities towards the centre of the river the breadth was extended to 40 feet, thus forming two forts, or platforms, mounted with cannon. There was still, however, an interstice in the middle of between 1,000 and 1,100 feet, through which the ships of the enemy, favoured by the wind and tide, or by the night, could manage to pass without any considerable loss, and which it therefore became necessary to fill up. This was accomplished by mooring across it the hulls of 32 vessels, at intervals of about 20 feet apart, and connecting them together with planks. Each vessel was planted with artillery and garrisoned by about 30 men; while the bridge was protected by a flotilla of vessels moored on each side, above and below, at a distance of about 200 feet. During the construction of the bridge, which lasted half a year, the citizens of Antwerp viewed with dismay the progress of a work that was not only to deprive them of their maritime commerce, but also of the supplies necessary for their subsistence and defence. At length they adopted a plan sug-

gested by Ghanbelli, an Italian engineer, and resolved to destroy the bridge by means of fire-ships, which seem to have been first used on this occasion. Several such vessels were sent down the river with a favourable tide and wind, of which two were charged with 6,000 or 7,000 lbs. of gunpowder each, packed in solid masonry, with various destructive missiles. One of these vessels went ashore before reaching its destination; the other arrived at the bridge and exploded with terrible effect. Curiosity to behold so novel a spectacle had attracted vast numbers of the Spaniards, who lined the shores as well as the bridge. Of these 800 were killed by the explosion, and by the implements of destruction discharged with the powder; a still greater number were maimed and wounded, and the bridge itself was considerably damaged. Farnese himself was thrown to the earth and lay for a time insensible. The besieged, however, did not follow up their plan with vigour. They allowed Farnese time to repair the damage, and the Spaniards, being now on the alert, either diverted the course of the fire-ships that were subsequently sent against them, or suffered them to pass the bridge through openings made for the purpose. In spite of the bridge, however, the beleaguered citizens might still have secured a transit down the river by breaking through the dykes between Antwerp and Lillo, and sailing over the plains thus laid under water, for which purpose it was necessary to obtain possession of the counter-dyke of Kowenstyn; but after a partial success, too quickly abandoned by Hohenlohe and Ste Aldegonde, they were defeated in a bloody battle which they fought upon the dyke. Antwerp was now obliged to capitulate; and as Farnese was anxious to put an end to so long a siege, it obtained more favourable terms than could have been anticipated (August 17th 1585). The prosperity of this great commercial city received, however, a severe blow from its capture by the Spaniards. A great number of the citizens, as well as of the inhabitants of Brabant and Flanders, removed to Amsterdam and Middelburg."—T. H. Dyer, *Hist. of Modern Europe*, bk. 3, ch. 9 (v. 2).—The downfall of the prosperity of the great capital "was instantaneous. The merchants and industrious citizens all wandered away from the place which had been the seat of a world-wide traffic. Civilization and commerce departed, and in their stead were the citadel and the Jesuits."—J. L. Motley, *Hist. of the United Netherlands*, ch. 5 (v. 1).

ALSO IN: F. Schiller, *Siege of Antwerp*.

A. D. 1585-1586.—Proffered sovereignty of the United Provinces declined by France and England.—Delusive English succors.—The queen's treachery and Leicester's incompetency.—Useless battle at Zutphen.—"It was natural that so small a State, wasted by its protracted struggles, should desire, more earnestly than ever, an alliance with some stronger power; and it was from among States supposed to have sympathies with Protestants, that such an alliance was sought. From the Protestant countries of Germany there was no promise of help; and the eyes of the Dutch diplomatists were therefore turned towards France and England. In France, the Huguenots, having recovered from St. Bartholomew, now enjoyed toleration; and were a rising and hopeful party, under the patronage of Henry of Navarre. If the king of France

would protect Holland from Philip, and extend to its people the same toleration which he allowed his own subjects, Holland offered him the sovereignty of the united provinces. This tempting offer was declined: for a new policy was now to be declared, which united France and Spain in a bigoted crusade against the Protestant faith. The League, under the Duke de Guise, gained a fatal ascendancy over the weak and frivolous king, Henry III., and held dominion in France. . . . Nor was the baneful influence of the League confined to France: it formed a close alliance with Philip and the Pope, with whom it was plotting the overthrow of Protestant England, the subjection of the revolted provinces of Spain, and the general extirpation of heresy throughout Europe. . . . The only hope of the Netherlands was now in England, which was threatened by a common danger; and envoys were sent to Elizabeth with offers of the sovereignty, which had been declined by France. So little did the Dutch statesmen as yet contemplate a republic, that they offered their country to any sovereign, in return for protection. Had bolder counsels prevailed, Elizabeth might, at once, have saved the Netherlands, and placed herself at the head of the Protestants of Europe. She saw her own danger, if Philip should recover the provinces: but she held her purse-strings with the grasp of a miser: she dreaded an open rupture with Spain; and she was unwilling to provoke her own Catholic subjects. Sympathy with the Protestant cause, she had none. . . . She desired to afford as much assistance as would protect her own realm against Philip, at the least possible cost, without precipitating a war with Spain. She agreed to send men and money: but required Flushing, Brill, and Rammekens to be held as a security for her loans. She refused the sovereignty of the States: but she despatched troops to the Netherlands, and sent her favourite, the Earl of Leicester, to command them. As she had taken the rebellious subjects of Spain under her protection, Philip retaliated by the seizure of British ships. Spanish vengeance was not averted, while the Netherlands profited little by her aid." — Sir T. E. May, *Democracy in Europe*, ch. 11 (p. 2).—Leicester sailed for the Hague in the middle of December, 1585, having been preceded by 8,000 English troops, eager to prevent or revenge the fall of Antwerp. "Had there been good faith and resolution, and had Lord Grey, or Sir Richard Bingham, or Sir John Norris been in command, 20,000 Dutch and English troops might have taken the field in perfect condition. The States would have spent their last dollar to find them in everything which soldiers could need. They would have had at their backs the enthusiastic sympathy of the population, while the enemy was as universally abhorred; and Parma, exhausted by his efforts in the great siege, with his chest empty, and his ranks thinned almost to extinction, could not have encountered them with a third of their numbers. A lost battle would have been followed by a renewed revolt of the reconciled Provinces, and Elizabeth, if she found peace so necessary to her, might have dictated her own conditions." But months passed and nothing was done, while Queen Elizabeth was treacherously negotiating with agents of Spain. In the summer of 1586, "half and more than half of the brave men who

had come over in the past September were dead. Their places were taken by new levies gathered in haste upon the highways, or by mutinous regiments of Irish kerns, confessed Catholics, and led by a man [Sir William Stanley] who was only watching an opportunity to betray his sovereign. . . . Gone was now the enthusiasm which had welcomed the landing of Leicester. In the place of it was suspicion and misgiving, distracted councils, and divided purposes. Elizabeth while she was diplomatising held her army idle. Parma, short-handed as he was, treated with his hand upon his sword, and was for ever carving slice on slice from the receding frontiers of the States. At the time of Leicester's installation he was acting on the Meuse. He held the river as far as Venloo. Venloo and Grave were in the hands of the patriots, both of them strong fortresses, the latter especially. . . . After the fall of Antwerp these two towns were Parma's next object. The siege of Grave was formed in January. In April Colonel Norris and Count Hohenlohe forced the Spanish lines and threw in supplies; but Elizabeth's orders prevented further effort. Parma came before the town in person in June, and after a bombardment which produced little or no effect, Grave, to the surprise of every one, surrendered. Count Hemart, the governor, was said to have been corrupted by his mistress. Leicester hanged him; but Hemart's gallows did not recover Grave or save Venloo, which surrendered also three weeks later. The Earl, conscious of the disgrace, yet seeing no way to mend it, . . . was willing at last to play into his mistress's hands. He understood her [Queen Elizabeth] at last, and saw what she was aiming at. 'As the cause is now followed,' he wrote to her on the 27th of June, 'it is not worth the cost or the danger. . . . They [the Netherlands] would rather have lived with bread and drink under your Majesty's protection than with all their possessions under the King of Spain. It has almost broken their hearts to think your Majesty should not care any more for them. But if you mean soon to leave them they will be gone almost before you hear of it. I will do my best, therefore, to get into my hands three or four most principal places in North Holland, so as you shall rule these men, and make war and peace as you list. Part not with Brill for anything. With these places you can have what peace you will in an hour, and have your debts and charges readily answered. But your Majesty must deal graciously with them at present, and if you mean to leave them keep it to yourself.' . . . No palliation can be suggested, of the intentions to which Leicester saw that she was still clinging, and which he was willing to further in spite of his oath to be loyal to the States. . . . The incapacity of Leicester . . . was growing evident. He had been used as a lay figure to dazzle the eyes of the Provinces, while both he and they were mocked by the secret treaty. The treaty was hanging fire. . . . The Queen had . . . so far opened her eyes as to see that she was not improving her position by keeping her army idle; and Leicester, that he might not part with his government in entire disgrace, having done absolutely nothing, took the field for a short campaign in the middle of August [1586]. Parma had established himself in Gelderland, at Zutphen, and Duesberg. The States held Deventer, further down the Issel; but

Deventer would probably fall as Grave and Venloo had fallen if the Spaniards kept their hold upon the river; Leicester therefore proposed to attempt to recover Zutphen. Every one was delighted to be moving. . . . The Earl of Essex, Sir William Russell, Lord Willoughby, and others who held no special commands, attached themselves to Leicester's staff; Sir Philip Sidney obtained leave of absence from Flushing; Sir John Norris and his brother brought the English contingent of the States army; Sir William Stanley had arrived with his Irishmen; and with these cavaliers glittering about him, and 9,000 men, Leicester entered Gelderland. Duesberg surrendered to him without a blow; Norris surprised a fort outside Zutphen, which commanded the river and straitened the communications of the town." Parma made an attempt, on the morning of September 22, to throw supplies into the town, and Leicester's knights and gentlemen, forewarned of this project by a spy, "Volunteered for an ambuscade to cut off the convoy. . . . Parma brought with him every man that he could spare, and the ambuscade party were preparing unconsciously to encounter 4,000 of the best troops in the world. They were in all about 500. . . . The morning was misty. The waggons were heard coming, but nothing could be seen till a party of horse appeared at the head of the train where the ambuscade was lying. Down charged the 500, much as in these late years 600 English lancers charged elsewhere, as magnificently and as uselessly. . . . Never had been a more brilliant action seen or heard of, never one more absurd and profitless. For the ranks of the Spanish infantry were unbroken, the English could not touch them, could not even approach them, and behind the line of their muskets the waggons passed steadily to the town. . . . A few, not many, had been killed; but among those whose lives had been flung away so wildly was Philip Sidney. He was struck by a musket ball on his exposed thigh, as he was returning from his last charge," and died a few weeks later. "Parma immediately afterwards entered Zutphen unmolested. . . . Leicester's presence was found necessary in England. With the natural sympathy of one worthless person for another, he had taken a fancy to Stanley, and chose to give him an independent command; and leaving the government to the Council of the States, and the army again without a chief, he sailed in November for London."—J. A. Froude, *Hist. of England: The Reign of Elizabeth*, ch. 33 (p. 6).

A. D. 1587-1588.—The ruin of the Spanish Provinces.—Great prosperity of the United Provinces.—Siege and capture of Sluys.—The last of Leicester.—"Though the United Provinces were distracted by domestic dissensions and enfeebled by mutual distrust, their condition, compared with that portion of the Netherlands reduced under the yoke of Spain, was such as to afford matter of deep gratulation and thankfulness. The miseries of war had visited the latter unhappy country in the fullest measure; multitudes of its inhabitants had fled in despair; and the sword, famine, and pestilence, vied with each other in destroying the remainder. . . . The rich

and smiling pastures, once the admiration and envy of the less favoured countries of Europe, were now no more; woods, roads, and fields, were confounded in one tangled mass of copse and brier. In the formerly busy and wealthy towns of Flanders and Brabant, Ghent, Antwerp, and Bruges, members of noble families were seen to creep from their wretched abodes in the darkness of night to beg their bread, or to search the streets for bones and offal. A striking and cheering contrast is the picture presented by the United Provinces. The crops had, indeed, failed there also, but the entire command of the sea which they preserved, and the free importation of corn, secured plentiful supplies. . . . They continued to carry on, under Spanish colours, a lucrative half-smuggling traffic, which the government of that nation found it its interest to connive at and encourage. The war, therefore, instead of being, as usual, an hindrance to commerce, rather gave it a new stimulus; the ports were crowded with vessels. . . . Holland and Zealand had now for more than ten years been delivered from the enemy. . . . The security they thus offered, combined with the freedom of religion, and the activity of trade and commerce, drew vast multitudes to their shores; the merchants and artisans expelled, on account of their religion, from the Spanish Netherlands, transferred thither the advantages of their enterprise and skill. . . . The population of the towns became so overflowing that it was found impossible to build houses fast enough to contain it. . . . The miserable condition of the Spanish Netherlands, and the difficulty of finding supplies for his troops, caused the Duke of Parma to delay taking the field until late in the summer [1587]; when, making a feint attack upon Ostend, he afterwards . . . commenced a vigorous siege of Sluys. In order to draw him off from this undertaking, Maurice, with the Count of Hohenlohe, marched towards Bois-le-Duc. . . . The danger of Sluys hastened the return of the Earl of Leicester to the Netherlands, who arrived in Ostend with 7,000 foot and 500 horse. . . . Sluys had been besieged seven weeks, and the garrison was reduced from 1,600 men to scarcely half that number, when Leicester made an attempt to master the fort of Blankenburg, in the neighbourhood of the enemy's camp; but on intelligence that Parma was approaching to give him battle, he hastily retreated to Ostend," and Sluys was surrendered. "The loss of Sluys exasperated the dissensions between Leicester and the States into undisguised and irreconcilable hostility." He was soon afterwards recalled to England, and early in the following year the queen required him to resign his command and governorship in the Netherlands. In the meantime, the English queen had reopened negotiations with Parma, who occupied her attention while his master, Philip II. of Spain, was preparing the formidable Armada which he launched against England the next year [see ENGLAND: A. D. 1588].—C. M. Davies, *Hist. of Holland*, pt. 3, ch. 2-3 (p. 2).

A. D. 1588-1593.—Successes of Prince Maurice.—Departure of Parma to France.—His death.—Appointment of Archduke Albert to the Government.—"The destruction of the great Spanish Armada by the English in 1588 infused new hopes into all the enemies of Spain, and animated the Dutch with such courage, that Maurice led his army against that of the Duke

of Parma, and forced him to raise the siege of Bergen-op-Zoom, at that time garrisoned by a portion of Leicester's army under the command of Sir Francis Vere. . . . The young Stadtholder was induced by this success to surprise the Castle of Blyenbeck, which was yielded to his arms in 1589; and the following year [March 1] he got possession of Breda by a 'ruse de guerre,'—having introduced 70 men into the town by concealing them in a boat laden with turf. "The Duke of Parma was now recalled from the Low Countries into France [see FRANCE: A. D. 1590], and the old Peter Ernest, Count de Mansfeld, succeeded to the government of the Low Countries. . . . Maurice defeated the Spanish army in the open field at Caervorden, and took Nimeguen [October 21, 1591] and Zutphen [May 30, 1591; also, Deventer, June 10, of the same year]. . . . These successes added greatly to the reputation of Count Maurice, who now made considerable progress, so that in the year 1591 the Dutch saw their frontiers extended, and had well-grounded hopes of driving the Spaniards out of Friesland in another campaign. . . . The death of the Prince of Parma [which occurred December 3, 1592] delivered the Confederates from a formidable adversary; but old Count Mansfeld, at the head of an army of 30,000 men, took the field against them. Maurice, however, in 1593, notwithstanding this covering force, sat down before Gertruydenberg, advantageously situated on the frontier of Brabant." The siege was regarded as a masterpiece of the military art of the day, and the city was brought to surrender at the end of three months. "With the useful aid of Sir Francis Vere and the English, Maurice afterwards took Gronenburg and Grave, which formed part of his own patrimony. The Duke of Parma was succeeded in the government of the Netherlands by the Archduke Albert, a younger son of the Emperor Maximilian, who was married to Isabella, daughter of King Philip."—Sir E. Cust, *Lives of the Warriors of the Thirty Years' War: Maurice of Orange-Nassau*, pp. 25-28.

A. D. 1594-1597.—Spanish operations in Northern France. See FRANCE: A. D. 1593-1598.

A. D. 1594-1609.—Steady decline of Spanish power.—Sovereignty of the provinces made over to the Infanta Isabella and the Archduke, her husband.—Death of Philip II.—Negotiations for peace.—A twelve years' truce agreed upon.—Acknowledgment of the independence of the republic.—"Philip's French enterprise had failed. The dashing and unscrupulous Henry of Navarre had won his crown, by conforming to the Catholic faith [see FRANCE: A. D. 1591-1593]. . . . Great was the shock given by his politic apostasy to the religious sentiments of Europe: but it was fatal to the ambition of Philip; and again the Netherlands could count upon the friendship of a king of France. Their own needs were great: but the gallant little republic still found means to assist the Protestant champion against their common enemy, the king of Spain. In the Netherlands the Spanish power was declining. The feeble successors of Parma were no match for Maurice of Nassau and the republican leaders: the Spanish troops were starving and mutinous: the provinces under

Spanish rule were reduced to wretchedness and beggary. Cities and fortresses fell, one after another, into the hands of the stadtholder. The Dutch fleet joined that of England in a raid upon Spain itself, captured and sacked Cadiz [see SPAIN: A. D. 1596], raised the flag of the republic on the battlements of that famous city; and left the Spanish fleet burning in the harbour. Other events followed, deeply affecting the fortunes of the republic. Philip at length made peace with Henry of Navarre, and was again free to coerce his revolted provinces. But his accursed rule was drawing to a close. In 1598 he made over the sovereignty of the Netherlands to the Infanta Isabella and her affianced husband, the Archduke Albert, who had cast aside his cardinal's hat, his archbishopric, and his priestly vows of celibacy, for a consort so endowed. Philip had ceased to reign in the Netherlands; and a few months afterwards [September 13, 1598] he closed his evil life, in the odour of sanctity. . . . The tyrant was dead: the little republic, which he had scourged so cruelly, was living and prosperous. . . . Far different was the lot of the ill-fated provinces still in the grasp of the tyrant. The land lay waste and desolate: its inhabitants had fled to England or Holland, or were reduced to want and beggary. . . . That the republic should have outlived its chief oppressor was an event of happy augury: but years of trial and danger were still to be passed through. The victory of Nieuport [gained July 2, 1600, by an army of Dutch and English over the superior forces of the Archduke Albert] raised Prince Maurice's fame, as a soldier, to its highest point; and the gallant defence of Ostend, for upwards of three years [against a siege, conducted by the Spanish general Spinola, to which its garrison finally succumbed in 1604, when the town was a heap of ruins, and after 100,000 men are said to have been sacrificed on both sides] . . . proved that the courage and endurance of his soldiers had not declined during the protracted war [while Sluys was taken by the Prince the same year]. At sea the Dutch fleets won new victories over the Spaniards and Portuguese; and privateers made constant ravages upon the enemy's commerce. But there were also failures and reverses, on the side of the republic, dissensions among its leaders, and anxieties concerning the attitude of foreign States. And thus, with varied fortunes, this momentous war had now continued for upwards of forty years. . . . On both sides there was a desire for peace. The Dutch would accept nothing short of unconditional independence: the Spaniards almost despaired of reducing them to subjection, while they dreaded more republican victories at sea, and the extension of Dutch maritime enterprise in the East. Overtures for peace were first made cautiously and secretly by the archdukes ['this was the title of the archduke and archduchess'], and received by the States with grave distrust. Jealous and haughty was the bearing of the republic, in the negotiations which ensued. The states-general, in full session, represented Holland, and received the Spanish envoys. The independence of the States was accepted, on both sides, as the basis of any treaty: but, as a preliminary to the negotiations, the republic insisted upon its formal recognition, as a free and equal State, in words dictated by itself. . . . At length an armistice was signed, in order to arrange the

terms of a treaty of peace. It was a welcome breathing time: but peace was still beset with difficulties and obstacles. The Spaniards were insincere: they could not bring themselves to treat seriously, and in good faith, with heretics and rebels: they desired the re-establishment of the Church of Rome; and they claimed the exclusive right of trading with the East and West Indies. The councils of the republic were also divided. Barneveldt, the civilian, was bent upon peace: Prince Maurice, the soldier, was burning for the renewal of the war. But Barneveldt and the peace party prevailed, and negotiations were continued. Again and again, the armistice was renewed: but a treaty of peace seemed as remote as ever. At length [April 9, 1609], after infinite disputes, a truce for twelve years was agreed upon. In form it was a truce, and not a treaty of peace: but otherwise the republic gained every point upon which it had insisted. Its freedom and independence were unconditionally recognised: it accepted no conditions concerning religion: it made no concessions in regard to its trade with the Indies. The great battle for freedom was won: the republic was free: its troubles and perils were at an end. Its oppressors had been the first to sue for peace: their commissioners had treated with the states-general at the Hague; and they had yielded every point for which they had been waging war for nearly half a century."—Sir T. E. May, *Democracy in Europe*, ch. 11 (v. 2).

A. D. 1594-1620.—Rise and growth of East-ern trade.—Formation of the Dutch East India Company.—"Previous to their assertion of national independence, the commerce of the Dutch did not extend beyond the confines of Europe. But new regions of traffic were now to open to their dauntless enterprise. It was in 1594 that Cornelius Houtman, the son of a brewer at Gouda, returned from Lisbon, where, having passed the preceding year, he had seen the gorgeous produce of the East piled on the quays of the Tagus. His descriptions fired the emulation of his friends at Amsterdam, nine of whom agreed to join stock and equip a little flotilla for a voyage round the Cape of Good Hope; Houtman undertook the command, and thus the marvellous commerce of the Dutch in India began. The influence which their trade with India and their settlements there exerted in maturing and extending the greatness of the Dutch, has often been overrated. It was a source, indeed, of infinite pride, and for a time of rapid and glittering profit; but it was attended with serious drawbacks, both of national expenditure and national danger. . . . From the outset they were forced to go armed. The four ships that sailed on the first voyage of speculation from Amsterdam, in 1595, were fitted out for either war or merchandise. They were about to sail into hitherto interdicted waters; they knew that the Portuguese were already established in the Spice Islands, whither they were bound; and Portugal was then a dependency of Spain. On their arrival at Java, they had, consequently, to encounter open hostility both from Europeans and the natives whom the former influenced against them. At Bali, however, they

were better received; and, in 1597, they reached home with a rich cargo of spices and Indian wares. It was a proud and joyous day in Amsterdam when their return was known. . . . From various ports of Zealand and Holland 80 vessels sailed the following year to America, Africa, and India. Vainly the Portuguese colonists laboured to convince the native princes of the East that the Dutch were a mere horde of pirates with whom no dealings were safe. Their businesslike and punctilious demeanour, and probably, likewise, the judiciously selected cargoes with which they freighted their ships outwards, whereby they were enabled to offer better terms for the silk, indigo, and spice they wished to buy, rapidly disarmed the suspicion of several of the chiefs. . . . In 1602 the celebrated East India Company was formed under charter granted by the States-General,—the original capital being 6,000,000 guilders, subscribed by the merchants of Delft, Rotterdam, Hoorn, Enkhuysen, Middleberg, but above all Amsterdam. They established factories at many places, both on the continent of India and in the Islands; but their chief depot was fixed at Bantam," until, dissatisfied with certain taxes imposed on them by the lord of Bantam, they looked elsewhere for a station. "The sovereign of Java gladly offered them a settlement not above 100 miles distant, with full permission to erect such buildings as they chose, and an engagement that pepper (the chief spice thence exported) should be sent out of his dominions toll-free. These terms were accepted. Jocatra, a situation very propitious for traffic, was chosen as the site of their future factory. Warehouses of stone and mortar quickly rose; and dwellings, to the number of 1,000, were in a short time added. All nations had leave to settle and trade within its walls; and this was the origin of Batavia. In six years the Company sent out 46 vessels, of which 43 returned in due course laden with rich cargoes. . . . By the books of the Company it appeared that, during the next eleven years, they maintained 30 ships in the Eastern trade, manned by 5,000 seamen. . . . Two hundred per cent. was divided by the proprietors of the Company's stock on their paid-up capital in sixteen years. . . . But of all the proud results of their Indian commerce, that which naturally afforded to the Dutch the keenest sense of exultation, was the opportunity it afforded them of thoroughly undermining the once exclusive trade of Spain, not with foreign nations merely, but with her own colonies, and even at home. The infatuated policy of her government had prepared the way for her decline. . . . In the space of a few years the Dutch had taken and rifled 11 Spanish galleons, 'carkets and other huge ships, and made about 40 of them unserviceable.' So crippled was their colonial trade that, even for their own use, the Spaniards were obliged to buy nutmegs, cloves, and mace, from their hated rivals."—W. T. McCullagh, *Industrial Hist. of Free Nations*, ch. 13 (v. 2). See MALAY ARCHIPELAGO; JAVA; SUMATRA; BORNEO; MOLUCCAS.

A. D. 1603-1619.—Calvinistic persecution of Arminianism.—The hunting down of John of Barneveldt by Prince Maurice.—Synod of Dort.—Calvin's doctrine of predestination was strongly expressed in what was called the Heidel-

berg Catechism. "A synod of the pastors of Holland had decreed that this must be signed by all their preachers, and be to them what the Thirty-nine Articles are to the English Church and the Confession of Augsburg to the Lutherans. Many preachers hesitated to pledge themselves to doctrines that they did not think Scriptural nor according to primitive faith, and still more, not accordant with the eternal mercy of God. Of these Jacob Hermann, a minister of Amsterdam, or as he Latinised his name, Arminius, was the foremost, and under his influence a number of clergy refused their signature. The University of Leyden in 1603 chose Arminius as their Professor of Theology. The opposite party, in great wrath, insisted on holding a synod, and the States-General gave permission, but at first only on condition that there should be a revision of the confession of faith and catechism. The ministers refused, but the States-General insisted, led by John Barneveldt, then Advocate and Keeper of the Seals, who declared in their name that as 'foster fathers and protectors of the churches to them every right belonged.' It was an Erastian sentiment, but this opinion was held by all reformed governments, including the English, and Barneveldt spoke in the hope of mitigating Calvinistic violence. The Advocate of the States-General was in fact their mouthpiece. They might vote, but no one expressed their decisions at home or abroad save the Advocate; and Barneveldt, both from position and character, was thus the chief manager of civil affairs, and an equal if not a superior power to Maurice of Nassau, the Stadtholder and commander-in-chief, and recently, by the death of his elder brother, Prince of Orange. The question had even been mooted of giving him the sovereignty, but to this Barneveldt was strongly averse. Maurice knew very little about the argument, and his real feelings were Arminian, though jealousy of Barneveldt made him favour the opposite party, whose chief champion was Jacob Gomer, or Gomerus as he called himself. King James, though really holding with the Arminians, disliked Barneveldt, and therefore threw all the weight of England into the scale against them. Arguments were held before Maurice and before the university, in which three champions on the one side were pitted against three on the other, but nothing came of them but a good deal of audacious profanity, till Arminius, in ministering to the sick during a visitation of the plague at Amsterdam, caught the disease and died. He was so much respected that the University of Leyden pensioned his widow. They chose a young Genevese, named Conrad Voorst or Vorstius, as his successor. Voorst had written two books, one on the nature of God, *Tractatus Theologicus de Deo*, and the other, *Exegesis Apologetica*, in which (by Fuller's account) there was a considerable amount of materialism, and likewise what amounted to a denial of the Divine Omniscience, being no doubt a reaction from extreme Calvinism. King James met with the book, and was horrified at its statements. He conceived himself bound to interfere both as protector to the States—which he said had been cemented with English blood—and because the University of Leyden was much frequented by the youth of England and Scotland, who often completed their legal studies there. He ordered Sir Ralph Winwood, his ambassador at the Hague, to deliver a sharp remonstrance to the

States, and to read them a catalogue of the dangerous and blasphemous errors that he had detected, recommending the States to protest against the appointment, and burn the books. Barneveldt was much distressed, and uncertain whether James really was speaking out of zeal for orthodoxy, or to have an excuse for a quarrel. Letters and arguments passed without number. . . . Leyden supported the professor it had invited, and, together with Barneveldt, felt that to expel a man whom they had chosen, at the bidding of a foreign sovereign, was almost accepting a yoke like that of the Inquisition. . . . Maurice, on the other hand, was glad to set the English King against Barneveldt, and to represent that support of the foes of strict Calvinism meant treachery to the Republic and a betrayal to Spain. Winwood, on the King's part, insisted on Vorstius's dismissal and banishment. . . . Maurice's own preacher, Uytenbogen, wrote a remonstrance on behalf of the Arminians, who were therefore sometimes termed Remonstrants, while the Gomerists, from their answer, were called Counter-Remonstrants. Unfortunately, political jealousy of Barneveldt on the part of Maurice caused the influence of Uytenbogen to decline. Most of the preachers and of the populace held to the Counter-Remonstrants and their old-fashioned Calvinism, most of the nobles and magistrates were Remonstrants. The question began to branch into a second, namely, whether the state had power to control the faith of all its subjects, and whether when it convoked a synod it could control its decisions, or was bound to enforce them absolutely and without question. . . . Whichever party was predominant in a place turned the other out of church. Appeals were made to the Stadtholder, and he became angry. The States-General at large, with Barneveldt to speak for them, were Remonstrant; the states of Holland were Counter-Remonstrant; and one of the questions thus at issue was how far the power of the general government outweighed that of a particular state. . . . By steps here impossible to follow, Maurice destroyed the ascendancy of Barneveldt, and the reports that the old statesman was playing into the hands of Spain grew more and more current. The magistrates of the Arminian persuasion found themselves depending for protection on the Waartgelders, a sort of burgher militia, who endeavoured to keep the peace between the furious mobs who struggled on either side. Accusations flew about freely that now Maurice, now Barneveldt wanted the sovereignty. England favoured the former; and after Henri IV. was dead, French support little availed the latter, but rather did him harm. Maurice did not scruple to raise the popular cry that there were two factions in Holland, for Orange or for Spain, though he must have known that there never had been a more steady foe of Spain than the old statesman. The public, however, preferred the general to the statesman, and bit by bit Maurice succeeded in exchanging Remonstrant magistrates for Counter-Remonstrant, or, as Barneveldt explained the matter to Sir Dudley Carleton, who had become ambassador from England, Puritan for double Puritan. . . . Sunday, the 17th of July, 1617, Uytenbogen preached against the assembly of a national synod, knowing well that it would only confirm and narrow the cruel doctrine. Maurice, who was bent on the synod came out in a rage. . . . Barneveldt

on this moved the States-General to refuse their consent to the synod as inconsistent with their laws. This was carried by a majority, and was called the Sharp Resolve. . . . The High Council by a majority of one set aside the Sharp Resolve, and decided for the synod. Barneveldt had a severe illness, during which Maurice's influence made progress, assisted by detestable accusations that the Advocate was in league with the Spaniards. At last Maurice mastered Utrecht, hitherto the chief hold of Arminianism. He disbanded the Waartgelders, and when the States-General came together in the summer of 1618, he had all prepared for sweeping his adversaries from his path. On the 29th of August, as Barneveldt was going to take his place at the States-General, he was told by a chamberlain that the Prince wished to speak with him, and in Maurice's ante-room was arrested by a lieutenant of the guard and locked up. In exactly the same manner was arrested his friend and supporter Pensionary Rambolt Hoogenboets, who had protested against the decree by which the High Council reversed that of the States-General, and Hugo Van Groot, or, as he called himself, Hugo Grotius, one of the greatest scholars who ever lived, especially in jurisprudence, and a strong adherent of the Advocate. . . . The synod met at Dordrecht [or Dort] in January, 1619, and lasted till April. The Calvinists carried the day completely, and Arminians were declared heretics, schismatics, incapable of preaching, or of acting as professors or schoolmasters, unless they signed the Heidelberg Catechism and Netherland Confession, which laid down the hard-and-fast doctrine that predestination excluded all free will on man's part, but divided the human race into vessels of wrath and vessels of mercy, without power on their own part to reverse the doom. . . . The trial of Barneveldt was going on at the same time with the Synod of Dordrecht after he had been many months in prison. Twenty-four commissioners were appointed, twelve from Holland, and two from each of the other states, and most of them were personal enemies of the prisoner. Before them he was examined day by day for three months, without any indictment; no witnesses, no counsel on either side; nor was he permitted pen and ink to prepare his defence, nor the use of his books and papers." Barneveldt and his family protested against the flagrant injustice and illegality of the so-called trial, but refused to sue for pardon, which Maurice was determined they should do. "It was submission that he wanted, not life"; but as the submission was not yielded he coldly exacted the life. Barneveldt was condemned and sentenced to be beheaded by the sword. The sentence was executed on the same day it was pronounced, May 12, 1619. Grotius was condemned to perpetual imprisonment, but made his escape, by the contrivance of his wife, in 1621.—C. M. A. D. 1621-1633.—End of the Twelve Years Truce.—Renewal of war.—Death of Prince Maurice.—Reversion of the sovereignty of the Spanish Provinces to the king of Spain.—"In 1621, the twelve years' truce being expired, the King of Spain and the Archdukes offered to renew it, on the condition that the States would acknowledge their ancient sovereigns, one of whom, the Archduke Albert, died this year. Even if the States had been inclined to negotiate, the will of Maurice was in the ascendant, and the war was renewed. The Dutch, it is true, were now entirely insulated. James of England was making overtures to Spain and being cajoled. France, who had wished to save Barneveldt, was unfriendly in consequence of the manner in which her intercession had been treated. The Dutch party which was opposed to Maurice was exasperated, and the great counsellor was no more there to advise his country in its emergencies. The safety of Holland lay in the fact that the wars of religion were being waged on a wider and more distant field, for a larger stake, and with larger armies. Not content with murdering Barneveldt, Maurice took care to ruin his family. But at last, and just before his death in 1625, Maurice, in the bitterness of disappointment, said, 'As long as the old rascal was alive, we had counsels and money; now we can find neither one nor the other.' . . . The memory of Barneveldt was avenged, even though his reputation has not been rehabilitated. Frederic Henry, half-brother of Maurice, was at once made Captain and Admiral-General of the States, and soon after Stadtholder. . . . Very speedily the controversy which had threatened to tear Holland asunder was silenced by mutual consent, except in synods and presbyteries. In a few years, Holland became, as far as the government was concerned, the most tolerant country in the world, the asylum of those whom bigotry hunted from their native land. Hence it became the favourite abode of those wealthy and enterprising Jews, who greatly increased its wealth by aiding its external and internal commerce."

—J. E. T. Rogers, *Story of Holland*, ch. 26.—"Marquis Spinola commenced the campaign by the siege of Bergen-op-Zoom, with a considerable Spanish army, in 1622, but Maurice was enabled to meet him with the united forces of Mansfeld, Brunswick [see GERMANY: A. D. 1621-1623], and his own, and obliged the Marquis to raise the siege. He afterwards encountered Don Gonsalvo de Cordova, who endeavoured to stay their passage into Germany with a Spanish force near Fleurus; but he also was defeated. After this, however, Prince Maurice could effect nothing considerable, but maintained his ground solely by acting on the defensive during the entire year 1623. . . . He could not prevent the capture [by Spinola] of Breda, one of the strongest fortifications of the Low Countries. . . . The mortification at being unable to relieve this place during a long blockade of six months

preyed upon the mind of Prince Maurice, whose health had already begun to give way. . . . An access of fever obliged him to quit the field and withdraw to the Hague, where he died in 1625, at the age of 58 years."—Sir E. Cust, *Lives of the Warriors of the Thirty Years' War: Maurice of Orange-Nassau*, p. 47.—The new Stadtholder, Prince Frederic Henry, made every effort to raise the siege of Breda, but without success, and the place was surrendered (June 2, 1625) to the Spaniards. In the next year little was accomplished on either side; but in 1627 the Prince took Grol, after a siege of less than one month. In 1628 the Dutch Admiral Piet Heyn captured one of the Spanish silver-fleets, with a cargo, largely pure silver, valued at 12,000,000 florins. In 1629 the king of Spalu and the Archduchess made overtures of peace, with offers of a renewed truce for 24 years. "But no sooner did the negotiations become public than they encountered general and violent opposition," especially from the West India Company, which found the war profitable, and from the ministers of the church. At the same time the operations of the war assumed more activity. The Prince laid siege to Bois-le-Duc, a Brabant town deemed impregnable, and the Spaniards, to draw him away, invaded Guelderland, and captured Amersfoort, near Utrecht. They laid waste the country, and were compelled to retire, without interrupting the siege of Bois-le-Duc, which presently was surrendered. In 1631 the Prince undertook the siege of Dunkirk, which had long been a rendezvous of pirates, troublesome to the commerce of all the surrounding nations; but on the approach of a Spanish relieving force, the deputies of the States, who had authority over the commander, required him to relinquish the undertaking. In 1632, the Prince achieved a great success, in the siege and reduction of Maestricht, which he accomplished, notwithstanding his lines were attacked by a Spanish army of 24,000 men, and by an army from Germany, under the Imperial general Pappenheim, who brought 16,000 men to assist in raising the siege. In the face of these two armies, Maestricht was forced to capitulate, and the fall of Limburg followed. Peace negotiations were reopened the same year, but came to nothing, and they were followed shortly by the death of the Archduchess Isabella. "At her death, the Netherlands, in pursuance of the terms of the surrender made by Philip II., reverted to the King of Spain, who placed the government, after it had been administered a short time by a commission, in the hands of the Marquis of Aitona, commander-in-chief of the army, until the arrival of his brother Ferdinand, cardinal and archbishop of Toledo [known as 'the Cardinal Infant'], whom he had, during the lifetime of the Archduchess, appointed her successor."—C. M. Davies, *Hist. of Holland*, pt. 3, ch. 6 (v. 2).

A. D. 1635-1638.—The Cardinal Infant in the government of the Spanish Provinces.—His campaigns against the Dutch and French.—Invasion of France.—Dutch capture of Breda.—In 1635, the Archduchess Isabella having recently died, it was thought expedient in Spain "that a member of the royal family should be intrusted with the administration of the Netherlands [Spanish Provinces]. This appointment was accordingly conferred on the Cardinal Infant [Ferdinand, son of Philip III.], who was at that time in Italy, where he had collected a considerable army. With this force, amounting to about 12,000 men, he had passed in the preceding year through Germany, on his route to the Netherlands, and, having formed a junction with the Imperialists, under the King of Hungary, he greatly contributed to the victory gained over the Swedes and German Protestants, at Nordlingen [see GERMANY: A. D. 1634-1639]. . . . The Cardinal Infant entered on the civil and military government of the Spanish Netherlands nearly at the time when the seizure of the Elector of Treves had called forth from France an open declaration of war. By uniting the newly raised troops which he had brought with him from Italy to the veteran legions of the provinces, he found himself at the head of a considerable military force. At the same time, an army of 20,000 French was assembled under the inspection of their king at Amiens, and was intrusted to Chatillon, and Mareschal Brezé the brother-in-law of Richelieu. . . . It was intended, however, that this army should form a junction with the Dutch at Maestricht, after which the troops of both nations should be placed under the orders of Frederic Henry, Prince of Orange, who had inherited all the military talents of his ancestors. In order to counteract this movement, the Cardinal Infant separated his army into two divisions. One was ordered to confront the Dutch, and the other, under Prince Thomas of Savoy, marched to oppose the progress of the French. This latter division of the Spaniards encountered the enemy at Avein, in the territory of Liege; but though it had taken up a favourable position, it was totally defeated, and forced to retreat to Namur. The French army then continued its march with little farther interruption, and effected its intended union with the Dutch in the neighbourhood of Maestricht. After this junction, the Prince of Orange assumed the command of the allied army, which now stormed and sacked Tillemont, where great cruelties were committed. . . . The union of the two armies spread terror throughout the Spanish Netherlands, and the outrages practised at Tillemont gave the Catholics a horror at the French name and alliance. . . . The Flemings, forgetting their late discontents with the Spanish government, now made the utmost efforts against their invaders. . . . The Spanish prince . . . contrived to elude a general engagement. . . . His opponents . . . were obliged to employ their arms in besieging towns. It was believed for some time that they intended to invest Brussels, but the storm fell on Louvain." The Emperor now sent from Germany a force of 18,000 men, under Piccolomini, "to the succour of the Cardinal Infant. The

slowness of all the operations of the Prince of Orange afforded sufficient time for these auxiliaries to cut off the French supplies of provisions, and advance to the relief of Louvain. On the intelligence of their approach, the half-famished French abandoned the siege, and, after suffering severely in their retreat, retired to recruit at Ruremonde. The Dutch afforded them no assistance, and showed them but little sympathy in their disasters. Though the Dutch hated Spain, they were jealous of France, and dreaded an increase of its power in the Netherlands. . . . Mareschals Chatillon and Brezé, who were thus in a great measure the victims of the policy of their allies, were under the necessity of leading back beyond the Meuse, to Nimeguen, the wretched remains of their army, now reduced to 9,000 men. . . . After the departure of the French, the exertions of the Prince of Orange were limited, during this season, to an attempt for the recovery of the strong fortress of Skink, which had recently been reduced by the Spaniards. The Cardinal Infant, availing himself of the opportunity thus presented to him, quickly regained, by aid of the Austrian reinforcements, his superiority in the field. He took several fortresses from the Dutch, and sent to the frontiers of France detachments which levied contributions over great part of Picardy and Champagne. . . . Encouraged by these successes, Olivarez [the Spanish minister] redoubled his exertions, and now boldly planned invasions of France from three different quarters"—to enter Picardy on the north, Burgundy on the east, and Guienne at the south. "Of all these expeditions, the most successful, at least for a time, was the invasion of Picardy, which, indeed, had nearly proved fatal to the French monarchy. By orders of the Cardinal Infant, his generals, Prince Thomas of Savoy, Piccolomini, and John de Vert, or Wert, . . . began their march at the head of an army which exceeded 30,000 men, and was particularly strong in cavalry. . . . No interruption being . . . offered by the Dutch, the Spanish generals entered Picardy [1636], and seized almost without resistance on La Capelle and Catelet, which the French ministry expected would have occupied their arms for some months. The Count de Soissons, who was already thinking more of his plots against Richelieu than the defence of his country, did nothing to arrest the progress of the Spaniards, till they arrived at the Somme," and there but little. They forced the passage of the river with slight difficulty, and "occupied Roye, to the south of the Somme, on the river Oise; and having thus obtained an entrance into France, spread themselves over the whole country lying between these rivers. The smoke of the villages to which they set fire was seen from the heights in the vicinity of Paris; and such in that capital was the consternation consequent on these events that it seems probable, had the Spanish generals marched straight on Paris, the city would have fallen into their hands." But Prince Thomas was not bold enough for the exploit, and prudently "receded with his army to form the siege of Corbie. This town presented no great resistance to his arms, but the time occupied by its capture allowed the Parisians to recover from their consternation, and to prepare the means of defence." They raised an army of 60,000 men, chiefly apprentices and artisans of the capital, before which Prince

Thomas was obliged to retreat. "The French quickly recovered all those fortified places in Picardy which had been previously lost by the incapacity, or, as Richelieu alleged, by the treachery of their governors. But they could not prevent the Spaniards from plundering and desolating the country as they retired. . . . The Cardinal Infant was obliged to remain on the defensive for some time after his retreat from Picardy to the Netherlands, which were anew invaded by a French force, under the Cardinal La Valette, a younger son of the Duke d'Epernon. But even while restricting his operations to defence, the Infant could not prevent the capture by the French of Ivry and Landreel in Hainault. While opposing the enemy in that quarter, he received intelligence of an unexpected attempt on Breda by the Dutch [1637]. He immediately hastened to its relief; but the Prince of Orange having rapidly collected 6,000 or 7,000 peasants, whom he had employed in forming intrenchments and drawing lines of circumvallation, was so well fortified on the arrival of the Cardinal Infant, who had crossed the Scheldt at Antwerp, and approached with not fewer than 25,000 men, that that Prince, in despair of forcing the enemy's camp, or in any way succouring Breda, marched towards Guelderland. In that province he took Venlo and Ruremonde; but Breda, as he had anticipated, surrendered to the Dutch after a siege of nine weeks. . . . Its capture greatly relieved the Dutch in Brabant, who now, for many years, had been checked by an enemy in the heart of their territories. . . . Early in the year 1638, the Infant resumed offensive operations, and again rendered himself formidable to his enemies. He frustrated the attempts which the Dutch had concerted against Antwerp. . . . In person he beat off the army of the Prince of Orange, who had invested Gueldres; and, about the same time, his active generals, Prince Thomas of Savoy and Piccolomini, compelled the French to raise the siege of St. Omer."—J. Dunlop, *Memoirs of Spain from 1621 to 1700*, v. 1, ch. 4.

A. D. 1643.—Invasion of France by the Spaniards and their defeat at Rocroi.—Loss of Thionville and the line of the Moselle. See FRANCE: A. D. 1642-1643; and 1643.

A. D. 1645-1646.—French campaign in Flanders, under Orleans and Enghien (Condé).—Siege and capture of Dunkirk.—"In 1645, Orleans led the [French] army into Flanders, and began the campaign with the capture of Mardyck. A few weeks of leisurely siege resulted in the conquest of some towns, and by the first of September Gaston sought rest at the Court. As it was now well towards the end of the season, the Hollanders were at last ready to coöperate, and they joined the French under Gassion and Rantzau. But the allied armies did little except march and countermarch, and at the end of the year the Spaniards surprised the French garrison at Mardyck and retook the only place of importance they had lost. . . . Gaston was, however, well content even with the moderate glory of such warfare. In 1646 he commanded an army of 35,000 men, one portion of which was led by Enghien himself. The Hollanders were under arms unusually early, but they atoned for this by accomplishing nothing. The French laid siege to Courtrai, which in due time surrendered, and they then spent three weeks in a vigorous siege of Mardyck. This

place was finally captured for the second time in fourteen months. It was now late in August, and Orleans was ready to rest from a campaign which had lasted three months. . . . By the departure of Gaston the Duke of Enghien was left free to attempt some important movement, and his thoughts turned upon the capture of the city of Dunkirk. Dunkirk was situated on the shore of the North Sea, in a position that made it alike important and formidable to commerce. . . . Its harbor leading to a canal in the city where a fleet might safely enter, and its position near the shores of France and the British Channel, had rendered it a frequent retreat for pirates. The cruisers that captured the ships of the merchants of Havre and Dieppe, or made plundering expeditions along the shores of Picardy and Normandy, found safe refuge in the harbor of Dunkirk. Its name was odious through northern France, alike to the shipper and the resident of the towns along the coast. The ravages of the pirates of Dunkirk are said to have cost France as much as a million a year. . . . The position of Dunkirk was such that it seemed to defy attack, and the strangeness and wildness of its approaches added terror to its name. It was surrounded by vast plains of sand, far over which often spread the waters of the North Sea, and its name was said to signify the church of the dunes. Upon them the fury of the storms often worked strange changes. What had seemed solid land would be swallowed up in some tempest. What had been part of the ocean would be left so that men and wagons could pass over what the day before had been as inaccessible as the Straits of Dover. An army attempting a siege would find itself on these wild dunes far removed from any places for supplies, and exposed to the utmost severity of storm and weather. Tents could hardly be pitched, and the changing sands would threaten the troops with destruction. The city was, moreover, garrisoned by 3,000 soldiers, and by 3,000 of the citizens and 2,000 sailors. . . . The ardor of Enghien was increased by these difficulties, and he believed that with skill and vigor the perils of a siege could be overcome. This plan met the warm approval of Mazarin. . . . Enghien advanced with his army of about 15,000 men, and on the 19th of September the siege began. It was necessary to prevent supplies being received by sea. Tromp, excited to hearty admiration of the genius of the young general, sailed with ten ships into the harbor, and cut off communications. Enghien, in the meantime, was pressing the circumvallation of the city with the utmost vigor. . . . Half fed, wet, sleepless, the men worked on, inspired by the zeal of their leader. Piccolomini attempted to relieve the city, but he could not force Enghien's entrenchments, except by risking a pitched battle, and that he did not dare to venture. Mines were now carried under the city by the besiegers, and a great explosion made a breach in the wall. The French and Spanish met, but the smoke and confusion were so terrible that both sides at last fell back in disorder. The French finally discovered that the advantage was really theirs, and held the position. Nothing now remained but a final and bloody assault, but Leyde did not think that honor required him to await this. He agreed that if he did not receive succor by the 10th of October, the city should be surrendered. Piccolomini dared not risk the

last army in Flanders in an assault on Enghien's entrenchments, and, on October 11th, the Spanish troops evacuated the town. A siege of three weeks had conquered obstacles of man and nature, and destroyed the scourge of French commerce."—J. B. Perkins, *France under [Richelieu and] Mazarin*, ch. 8 (v. 1).

ALSO IN: Lord Mahon, *Life of Condé*, ch. 2.

A. D. 1646-1648.—Final Negotiation of Peace between Spain and the United Provinces.—"The late campaign had been so unfortunate [to the Spaniards] that they felt their only possibility of obtaining reasonable terms, or of continuing the war with the hope of a change in fortune, was to break the alliance between Holland and France. A long debt of gratitude, assistance rendered in the struggle with Spain when assistance was valuable, the treaty of 1635 renewed in 1644, forbade Holland making a peace, except jointly with France. On the other hand, the States-General were weary of war, and jealous of the power and ambition of the French. . . . This disposition was skilfully fostered by the Spanish envoys. Pau and Knuyt, plenipotentiaries from Holland to the Congress at Münster [where, in part, the negotiations of the Peace of Westphalia were in progress—see GERMANY: A. D. 1648], were gained to the Spanish interest, as Mazarin claimed, by the promise to each of 100,000 crowns. But, apart from bribes, the Spanish used Mazarin's own plans to alarm the Hollanders. . . . It was intimated to the Hollanders that France was about to make a separate peace, that the Spanish Netherlands were to be given her, and that perhaps with the hand of the infanta might be transferred what claims Spain still made on the allegiance of the United Provinces. The French protested in vain they had never thought of making any treaty unless Holland joined, and that the proposed marriage of Louis with the infanta had been idle talk, suggested by the Spanish for the purpose of alarming the States-General. The Hollanders were suspicious, and they became still more eager for peace. . . . In the spring of 1646, seventy-one proposed articles had been submitted to the Spanish for their consideration. The French made repeated protests against these steps, but the States-General insisted that they were only acting with such celerity as should enable them to have the terms of their treaty adjusted as soon as those of the French. The successes of 1646 and the capture of Dunkirk quickened the desires of the United Provinces for a treaty with their ancient enemy. . . . In December, 1646, articles were signed between Spain and Holland, to be inserted in the treaty of Münster, when that should be settled upon, though the States-General still declared that no peace should be made unless the terms were approved by France. Active hostilities were again commenced in 1647, but little progress was made in Flanders during this campaign. Though the Hollanders had not actually made peace with Spain, they gave the French no aid. . . . On January 30, 1648, the treaty was at last signed. 'One would think,' wrote Mazarin, 'that for eighty years France had been warring with the provinces, and Spain had been protecting them. They have stained their reputation with a shameful blemish.' It was eighty years since William of Orange had issued his proclamation inviting all the Nether-

lands to take up arms 'to oppose the violent tyranny of the Spaniards.' Unlike the truce of 1609, a formal and final peace was now made. The United Provinces were acknowledged as free and sovereign states. At the time of the truce the Spaniards had only treated with them 'in quality of, and as holding them for independent provinces.' By a provision which had increased the eagerness for peace of the burghers and merchants of the United Provinces, it was agreed that the Escaut [Scheldt] should be closed. The wealth and commerce of Antwerp were thus sacrificed for the benefit of Amsterdam. The trade with the Indies was divided between the two countries. Numerous commercial advantages were secured and certain additional territory was ceded to the States-General.—J. B. Perkins, *France under [Richelieu and] Mazarin*, ch. 8 (v. 1).—"It had . . . become a settled conviction of Holland that a barrier of Spanish territory between the United Provinces and France was necessary as a safeguard against the latter. But the idea of fighting to maintain that barrier had not yet arisen, though fighting was the outcome of the doctrine. All that the United Provinces now did, or could do, was simply to back out of the war with Spain, sit still, and look passively upon the conflict between her and France for possession of the barrier, until it should please the two belligerents to make peace."—J. Geddes, *Hist. of the Administration of John De Witt*, bk. 2, ch. 1, sect. 1 (v. 1).

(Spanish Provinces): A. D. 1647-1648.—The Spanish war with France.—Siege and Battle of Lens.—"While Condé was at the head of the army of the Netherlands, it at least suffered no disaster; but, while he was affording the enemy a triumph in Spain [by his failure at Lerida—see SPAIN: A. D. 1644-1646], the army which he left behind him was equally unfortunate. As he had taken some regiments with him to Spain, it did not exceed 16,000 men; and in 1647 was commanded by the two marshals, Gassion and Rantzau," who exercised the command on alternate days. Both were brave and skilful officers, but they were hostile to one another, and Rantzau was, unfortunately, a drunkard. "The Spanish army had been raised to 22,000 men, and besides being superior in numbers to them, was now under the command of a singularly active leader, the Archduke Leopold. He took town after town before their face; and towards the end of June laid siege to Landrecies. The danger of so important a place stimulated Mazarin to send some strong battalions, including the royal guards, to reinforce the army: and the two marshals made skilful dispositions to surprise the Spanish camp. By a night march of great rapidity, they reached the neighbourhood of the enemy without their presence being suspected; but the next morning, when the attack was to be made, it was Rantzau's turn to command; and he was too helplessly drunk to give the necessary orders. Before he had recovered his consciousness daylight had revealed his danger to the archduke, and he had taken up a position in which he could give battle with advantage. Greatly mortified, the French were forced to draw off, and leave Landrecies to its fate. As some apparent set-off to their losses, they succeeded in taking Dixmude, and one or two other unimportant towns, and were besieging

Lens, when Gassion was killed; and though, a few days afterwards, that town was taken, its capture made but small amends. . . . Though the war was almost at an end in Germany, Turenne was still in that country; and, therefore, the next year there was no one who could be sent to replace Gassion but Condé and Grammont, who fortunately for the prince, was his almost inseparable comrade and adviser. . . . Though 16,000 men had been thought enough for Gassion and Rantzau, 30,000 were now collected to enable Condé to make a more successful campaign. The archduke had received no reinforcements, and had now only 18,000 men to make head against him; yet with this greatly inferior force he, for a while, balanced Condé's successes; losing Ypres, it is true, but taking Courtrai and Furnes, and defeating and almost annihilating a division with which the prince had detached Rantzau to make an attempt upon Ostend. At last, in the middle of August, he laid siege to Lens, the capture of which had, as we have already mentioned, been the last exploit of the French army in the preceding campaign, and which was now retaken without the garrison making the slightest effort at resistance. But, just as the first intelligence of his having sat down before it reached Condé, he was joined by the Count d'Erlach with a reinforcement of 5,000 men from the German army; and he resolved to march against the archduke in the hope of saving the place. "He arrived in sight of the town on the 20th of August, a few hours after it had surrendered; and he found the archduke's victorious army in a position which, eager as he was for battle, he could not venture to attack. For Leopold had 18,000 men under arms, and the force that Condé had been able to bring with him did not exceed 14,000, with 18 guns. For the first time in his life he decided on retreating;" but early in the retreat his army was thrown into disorder by an attack from the archduke's cavalry, commanded by General Beck. "All was nearly lost, when Grammont turned the fortune of the day. He was in the van, but the moment that he learnt what was taking place behind him, he halted the advanced guard, and leading it back towards the now triumphant enemy, gave time for those regiments which had been driven in to rally behind the firm line which he presented. . . . It soon came to be a contest of hard fighting, unvaried by manoeuvres on either side; and in hard fighting no troops could stand before those who might be led by Condé. . . . At last victory declared for him in every part of his line. He had sustained a heavy loss himself, but less than that of the enemy, who left 3,000 of their number slain upon the field; while 5,000 prisoners, among whom was Beck himself, struck down by a mortal wound, and nearly all their artillery and baggage, attested the reality and greatness of his triumph."—C. D. Yonge, *Hist. of France under the Bourbons*, ch. 10 (v. 2).

ALSO IN: Sir E. Cust, *Lives of the Warriors of the Civil Wars*, pt. 1, pp. 149-152.

A. D. 1647-1650.—Suspension of the Stadtholdership.—Supremacy of the States of Holland.—The fourth stadtholder, William II., who succeeded his father, Frederick Henry, in 1647, "was young and enterprising, and not at all disposed to follow the pacific example of his father. . . . His attempt at a coup d'état only prepared

the way for an interregnum. . . . He was brother-in-law to the Elector of Brandenburg . . . and son-in-law to Charles I. of England and Henrietta Maria, the sister of Louis XIII. . . . The proud descendant of the Stuarts, the Princess Mary, who had been married to him when hardly more than a child, thought it beneath her not to be the wife of a sovereign, and encouraged her husband not to be satisfied to remain merely 'the official of a republic.' Thus encouraged, the son of Frederick Henry cherished the secret purpose of transforming the elective stadtholdership into an hereditary monarchy. . . . He needed supreme authority to enable him to render assistance to Charles I. . . . Finding in the opposition of the States an insurmountable obstacle to his wish of intervention, he sought the support of France, . . . and was now ready to come to an understanding with Mazarin to break the treaty of Munster and wrest the Netherlands from Spain. Mazarin promised in return to help him to assert his authority over the States. . . . But if William desired war, the United Provinces, and in particular the province of Holland, could not dispense with peace. . . . The States of Holland . . . fixed the period for the disbanding of the twenty-nine companies whose dismissal had been promised to them. After twelve days of useless deliberations they issued definite orders to that effect. The step had been provoked, but it was precipitate and might give rise to a legal contest as to their competency. The Prince of Orange, therefore, eager to hasten a struggle from which he expected an easy victory, chose to consider the resolution of the States of Holland as a signal for the rupture of the Union, and the very next day solemnly demanded reparation from the States-General, who in their turn issued a counter order. The Prince made skilful use of the rivalry of power between the two assemblies to obtain for himself extraordinary powers which were contrary to the laws of the Confederation. By the terms of the resolution, which was passed by only four provinces, of which two were represented by but one deputy each, he was authorised to take all measures necessary for the maintenance of order and peace, and particularly for the preservation of the Union. 'The States-General consequently commissioned him to visit the town councils of Holland, accompanied by six members of the States-General and of the Council of State, with all the pomp of a military escort, including a large number of officers. He was charged to address them with remonstrances and threats intended to intimidate the provincial States.' This was the first act of the coup d'état that he had prepared, and his mistake was quickly shown him." The Prince gained nothing by his visitation of the towns. At Amsterdam he was not permitted to enter the place with his following, and he returned to the Hague especially enraged against that bold and independent city. He planned an expedition to take it by surprise; but the citizens got timely warning and his scheme was baffled. He had succeeded, however, in arresting and imprisoning six of the most influential deputies of the Assembly of Holland, and his attitude was formidable enough to extort some concessions from the popular party, by way of compromise. A state of suspicious quiet was restored for the time, which William improved by renewing negotia-

tions for a secret treaty with France. "Arrogating to himself already the right to dispose as he pleased of the republic, he signed a convention with Count d'Estrades, whom he had summoned to the Hague. By this the King of France and the Prince of Orange engaged themselves 'to attack conjointly the Netherlands on May 1, 1651, with an army of 20,000 foot and 10,000 horse, to break at the same time with Cromwell, to re-establish Charles II. as King of England, and to make no treaty with Spain excepting in concert with each other.' The Prince of Orange guaranteed a fleet of 50 vessels besides the land contingent, and in return for his co-operation was promised the absolute possession of the city of Antwerp and the Duchy of Brabant or Marquisate of the Holy Roman Empire. William thus interested France in the success of his cause by making ready to resume the war with Spain, and calculated, as he told his confidants, on profiting by her assistance to disperse the cabal opposed to him. . . . The internal pacification amounted then to no more than a truce, when three months later the Prince of Orange, having over-fatigued and heated himself in the chase, was seized with small-pox, of which in a few days he died. He was thus carried off at the age of 24, in the full force and flower of his age, leaving only one son, born a week after his father's death. . . . His attempt at a coup d'état was destined to press heavily and long upon the fate of the posthumous son, who had to wait 22 years before succeeding to his ancestral functions. It closed the succession to him for many years, by making the stadtholdership a standing menace to the public freedom. . . . The son of William II., an orphan before his birth, and named William like his father, seemed destined to succeed to little more than the paternal name. . . . Three days after the death of William II., the former deputies, whom he had treated as state prisoners and deprived of all their offices, were recalled to take their seats in the Assembly. At the same time the provincial Town Councils assumed the power of nominating their own magistrates, which had almost always been left to the pleasure of the Stadtholder, and thus obtained the full enjoyment of municipal freedom. The States of Holland, on their side, grasped the authority hitherto exercised in their province by the Prince of Orange, and claimed successively all the rights of sovereignty. The States of Zealand . . . exhibited the same eagerness to free themselves from all subjection. . . . Thus, before declaring the stadtholdership vacant, the office was deprived of its prerogatives. To complete this transformation of the government, the States of Holland took the initiative in summoning to the Hague a great assembly of the Confederation, which met at the beginning of the year 1651. . . . The congress was called upon to decide between two forms of constitution. The question was whether the United Provinces should be a republic governed by the States-General, or whether the government should belong to the States of each province, with only a reservation in favour of the obligations imposed by the Act of Union. Was each province to be sovereign in itself, or subject to the federal power?" The result was a suspension and practical abolition of the stadtholdership. "Freed from the counterbalancing power of the Stadtholder, Holland to a great extent absorbed the

federal power, and was the gainer by all that that power lost. . . . The States of Holland, . . . destined henceforward to be the principal instrument of government of the republic, was composed partly of nobles and partly of deputies from the towns. . . . The Grand Pensionary was the minister of the States of Holland. He was appointed for five years, and represented them in the States-General. . . . Called upon by the vacancy in the stadtholdership to the government of the United Provinces, without any legal power of enforcing obedience, Holland required a statesman who could secure this political supremacy and use it for her benefit. The nomination of John de Witt as Grand Pensionary placed at her service one of the youngest members of the assembly."—A. L. Pontalis, *John de Witt*, ch. 1-2 (v. 1).

(United Provinces): A. D. 1648-1665.—Prosperity and pre-eminence of the Dutch Republic.—The causes.—"That this little patch of earth, a hog rescued from the waters, warred on ever by man and by the elements, without natural advantages except those of contact with the sea, should in the middle of the seventeenth century have become the commercial centre of Europe, is one of the phenomena of history. But in the explanation of this phenomenon history has one of its most instructive lessons. Philip II. said of Holland, 'that it was the country nearest to hell.' Well might he express such an opinion. He had buried around the walls of its cities more than three hundred thousand Spanish soldiers, and had spent in the attempt at its subjugation more than two hundred million ducats. This fact alone would account for his abhorrence, but, in addition, the republic was in its every feature opposed to the ideal country of a bigot and a despot. The first element which contributed to its wealth, as well as to the vast increase of its population, was its religious toleration. . . . This, of course, was as incomprehensible to a Spanish Catholic as it was to a High-Churchman or to a Presbyterian in England. That Lutherans, Calvinists, Anabaptists, Jews, and Catholics should all be permitted to live under the same government seemed to the rest of Europe like flying in the face of Providence. Critics at this time occasionally said that the Hollanders cared nothing for religion; that with them theology was of less account than commerce. To taunts like these no reply was needed by men who could point to their record of eighty years of war. This war had been fought for liberty of conscience, but more than all, as the greater includes the less, for civil liberty. During its continuance, and at every crisis, Catholics had stood side by side with Protestants to defend their country, as they had done in England when the Spanish Armada appeared upon her coast. It would have been a strange reward for their fidelity to subject them, as Elizabeth did, to a relentless persecution, upon the pretext that they were dangerous to the State. In addition to the toleration, there were other causes leading to the marvellous prosperity of the republic, which are of particular interest to Americans. In 1659, Samuel Lamb, a prominent and far-seeing London merchant, published a pamphlet, in the form of a letter to Cromwell, urging the es-

tablishment of a bank in England similar to the one at Amsterdam. In this pamphlet, which Lord Somers thought worthy of preservation, the author gives the reasons, as they occurred to him, which accounted for the vast superiority of Holland over the rest of Europe as a commercial nation. . . . As the foundation of a bank for England was the subject of the letter, the author naturally lays particular stress upon that factor, but the other causes which he enumerates as explaining the great trade of the republic are the following: First. The statesmen sitting at the helm in Holland are many of them merchants, bred to trade from their youth, improved by foreign travel, and acquainted with all the necessities of commerce. Hence, their laws and treaties are framed with wisdom. Second. In Holland when a merchant dies, his property is equally divided among his children, and the business is continued and expanded, with all its traditions and inherited experience. In England, on the contrary, the property goes to the eldest son, who often sets up for a country gentleman, squanders his patrimony, and neglects the business by which his father had become enriched. Third. The honesty of the Hollanders in their manufacturing and commercial dealings. When goods are made up in Holland, they sell everywhere without question, for the purchaser knows that they are exactly as represented in quality, weight, and measure. Not so with England's goods. Our manufacturers are so given to fraud and adulteration as to bring their commodities into disgrace abroad. 'And so the Dutch have the pre-eminence in the sale of their manufactures before us, by their true making, to their very files and needles.' Fourth. The care and vigilance of the government in the laying of impositions so as to encourage their own manufactures; the skill and rapidity with which they are changed to meet the shifting wants of trade; the encouragement given by ample rewards from the public treasury for useful inventions and improvements; and the promotion of men to office for services and not for favor or sinister ends. Such were the causes of the commercial supremacy of the Dutch as they appeared to an English merchant of the time, and all modern investigations support his view. . . . ; Sir Joshua [Josiah] Child, writing a few years later ['A New Discourse of Trade, p. 2, and after—1665], gives a fuller explanation of the great prosperity of the Netherland Republic. He evidently had Lamb's pamphlet before him, for he enumerates all the causes set forth by his predecessor. In addition, he gives several others, as to some of which we shall see more hereafter. Among these are the general education of the people, including the women, religious toleration, care of the poor, low custom duties and high excise, registration of titles to real estate, low interest, the laws permitting the assignment of debts, and the judicial system under which controversies between merchants can be decided at one fortieth part of the expense in England. . . . Probably, no body of men governing a state were ever more enlightened and better acquainted with the necessities of legislation than were these burghers, merchants, and manufacturers who for two centuries gave laws to Holland. It was largely due to the intelligence displayed by these men that the republic, during the continuance of its war, was enabled to support a burden of taxa-

tion such as the world has rarely seen before or since. The internal taxes seem appalling. Rents were taxed twenty-five per cent.; on all sales of real estate two and a half per cent. were levied, and on all collateral inheritances five per cent. On beer, wine, meat, salt, spirits, and all articles of luxury, the tax was one hundred per cent., and on some articles this was doubled. But this was only the internal taxation, in the way of excise duties, which were levied on every one, natives and foreigners alike. In regard to foreign commodities, which the republic needed for its support, the system was very different. Upon them there was imposed only a nominal duty of one per cent., while wool, the great staple for the manufacturers, was admitted free. Here the statesmen of the republic showed the wisdom which placed them, as masters of political economy, at least two centuries in advance of their contemporaries."—D. Campbell, *The Puritan in Holland, England, and America*, v. 2, pp. 324-331.

(The United Provinces): A. D. 1651-1660.—The rule of Holland, and her Grand Pensionary, John de Witt.—"The Republic had shaken off the domination of a person; it now fell under the domination of a single province. Holland was overwhelmingly preponderant in the federation. She possessed the richest, most populous, and most powerful towns. She contributed more than one-half of the whole federal taxation. She had the right of naming the ambassadors at Paris, Stockholm, and Vienna. The fact that the States General met on her territory—at the Hague—necessarily gave her additional influence and prestige. . . . With the Stadtholder's power that of the States General also, as representing the idea of centralisation, had largely disappeared. The Provincial Estates of Holland, therefore, under the title of 'Their High Mightinesses,' became the principal power—to such an extent, indeed, that the term 'Holland' had by the time of the Restoration [the English Restoration, A. D. 1660] become synonymous among foreign powers with the whole Republic. Their chief minister was called 'The Grand Pensionary,' and the office had been since 1653 filled by one of the most remarkable men of the time, John de Witt. John de Witt therefore represented, roughly speaking, the power of the merchant aristocracy of Holland, as opposed to the claims of the House of Orange, which were supported by the 'noblesse,' the army, the Calvinistic clergy, and the people below the governing class. Abroad the Orange family had the sympathy of monarchical Governments. Louis XIV. despised the Government of 'Messieurs les Marchands,' while Charles II., at once the uncle and the guardian of the young Prince of the house of Orange, the future William III. of England, and mindful of the scant courtesy which, to satisfy Cromwell, the Dutch had shown him in exile, was ever their bitter and unscrupulous foe. The empire of the Dutch Republic was purely commercial and colonial, and she held in this respect the same position relatively to the rest of Europe that England holds at the present day."—O. Airy, *The Eng. Restoration and Louis XIV.*, ch. 9.

(Holland): A. D. 1665-1666.—War with England renewed.—"A formal declaration of war between Holland and England took place in March, 1665. The English nation, jealous of the commercial prosperity of Holland, eagerly seconded the views of the king against that country, and in regard to the war a remarkable degree of union prevailed throughout Great Britain. Such, however, was not the case with the Dutch, who were very much divided in opinion, and had many reasons to be doubtful of the support of France. One of the grand objects of Charles II. was undoubtedly . . . to restore his nephew the Prince of Orange to all the power which had been held by his ancestors in the United Provinces. But between Holland and England there existed, besides numerous other most fertile causes of discord, unsettled claims upon distant territories, rival colonies in remote parts of the world, maritime jealousy and constant commercial opposition. These were national motives for hostility, and affected a large body of the Dutch people. But, on the other hand, considerations of general interest were set aside by the political factions which divided the United Provinces, and which may be classed under the names of the Republican and the Monarchical parties. The Monarchical party was, of course, that which was attached to the interests of the House of Orange. . . . In the end of 1664, 130 Dutch merchantmen had been captured by England; acts of hostility had occurred in Guinea, at the Cape de Verd, [in New Netherland], and in the West Indies: but Louis [XIV. of France] had continued to avoid taking any active part against Great Britain, notwithstanding all the representations of De Witt, who on this occasion saw in France the natural ally of Holland. On the 13th of June [1665], however, a great naval engagement took place between the Dutch fleet, commanded by Opdam and Van Tromp, and the English fleet, commanded by the Duke of York and Prince Rupert. Opdam was defeated and killed; Van Tromp saved the remains of his fleet; and on the very same day a treaty was concluded between Arlington [the English minister] and an envoy of the Bishop of Munster, by which it was agreed that the warlike and restless prelate should invade the United Provinces with an army of 20,000 men, in consideration

of sums of money to be paid by England. This treaty at once called Louis into action, and he notified to the Bishop of Munster that if he made any hostile movement against the States of Holland he would find the troops of France prepared to oppose him. This fact was announced to the States by D'Estrades on the 22nd of July, together with the information that the French monarch was about to send to their assistance a body of troops by the way of Flanders. . . . Still, however, Louis hung back in the execution of his purposes, till the aspect of affairs in the beginning of 1666 forced him to declare war against England, on the 26th of January in that year, according to the terms of his treaty with Holland. . . . The part that France took in the war was altogether insignificant, and served but little to free the Dutch from the danger in which they were placed. That nation itself made vast efforts to obtain a superiority at sea; and in the beginning of June, 1666, the Dutch fleet, commanded by De Ruyter and Van Tromp, encountered the English fleet, under Monk and Prince Rupert, and a battle which lasted for four days, with scarcely any intermission, took place. It would seem that some advantage was gained by the Dutch; but both fleets were tremendously shattered, and retired to the ports of their own country to refit. Shortly after, however, they again encountered, and one of the most tremendous naval engagements in history took place, in which the Dutch suffered a complete defeat; 20 of their first-rate men-of-war were captured or sunk; and three admirals, with 4,000 men, were killed on the part of the States. The French fleet could not come up in time to take part in the battle, and all that Louis did was to furnish De Witt with the means of repairing the losses of the States as rapidly as possible. The energy of the grand pensionary himself, however, effected much more than the slow and unwilling succour of the French king. With almost superhuman exertion new fleets were made ready and manned, while the grand pensionary amused the English ministers with the prospect of a speedy peace on their own terms; and at a moment when England was least prepared, De Ruyter and Cornelius de Witt appeared upon the coast, sailed up the Thames, attacked and took Sheerness, and destroyed a great number of ships of the line. A multitude of smaller vessels were burnt; and the consternation was so great throughout England, that a large quantity of stores and many ships were sunk and destroyed by order of the British authorities themselves, while De Ruyter ravaged the whole sea-coast from the mouth of the Thames to the Land's End. The negotiations for peace, which had commenced at Breda, were now carried on upon terms much more advantageous to Holland, and were speedily concluded; England, notwithstanding the naval glory she had gained, being fully as much tired of the war as the States themselves. A general treaty was signed on the 25th of July.—G. P. R. James, *Life and Times of Louis XIV.*, v. 2, ch. 3.—“The thunder of the Dutch guns in the Medway and the Thames woke England to a bitter sense of its degradation. The dream of loyalty was roughly broken. ‘Everybody now-a-days,’ Pepys tells us, ‘reflect upon Oliver and commend him: what brave things he did, and made all the neighbour princes fear him.’ But Oliver’s suc-

cessor was coolly watching this shame and discontent of his people with the one aim of turning it to his own advantage.”—J. R. Green, *Hist. of the Eng. People*, bk. 8, ch. 1 (v. 3).

(The Spanish Provinces): A. D. 1667.—The claims and conquests of Louis XIV.—The War of the Queen’s Rights.—In 1660 Louis XIV., king of France, was married to the Infanta of Spain, Maria Theresa, daughter of Philip IV., who solemnly renounced at the time, for herself and her posterity, all rights to the Spanish crown. The insincerity and hollowness of the renunciation was proved terribly at a later time by the long “war of the Spanish succession.” Meantime Louis discovered other pretended rights in his Spanish wife on which he might found claims for the satisfaction of his territorial greed. These rested on the fact that she was born of her father’s first marriage, and that a customary right in certain provinces of the Spanish Netherlands gave daughters of a first marriage priority of inheritance over sons of a second marriage. At the same time, in the laws of Luxembourg and Franche-Comté, which admitted all children to the partition of an inheritance, he found pretext for claiming, on behalf of his wife, one fourth of the former and one third of the principality last named. Philip IV. of Spain died in September, 1665, leaving a sickly infant son under the regency of an incapable and priest-ruled mother, and Louis began quickly to press his claims. Having made his preparations on a formidable scale, he sent forth in May, 1667, to all the courts of Europe, an elaborate “Treatise on the Rights of the Most Christian Queen over divers States of the monarchy of Spain,” announcing at the same time his intention to make a “journey” in the Catholic Netherlands—the intended journey being a ruthless invasion, in fact, with 50,000 men, under the command of the great marshal-general, Turenne. The army began its march simultaneously with the announcement of its purpose, crossing the frontier on the 24th of May. Town after town was taken, some without resistance and others after a short, sharp siege, directed by Vauban, the most famous among military engineers. Charleroi was occupied on the 2d of June; Tournay surrendered on the 24th; two weeks later Douai fell; Courtrai endured only four days of siege and Oudenarde but two; Lille was a more difficult prize and held Turenne and the king before it for twenty days. “All Walloon Flanders had again become French at the price of less effort and bloodshed than it had cost, in the Middle Ages, to force one of its places. . . . September 1, the whole French army was found assembled before the walls of Ghent.” But Ghent was not assailed, the French army being greatly fatigued and much reduced by the garrisoning of the conquered places. Louis, accordingly, returned to Saint-Germain, and Turenne, after taking Alost, went into winter quarters. Before the winter passed great changes of circumstance had occurred. The Triple Alliance of England, Holland and Sweden had been formed, Louis had made his secret treaty at Vienna with the Emperor, for the partitioning of the Spanish dominions, and his further “journey” in the Netherlands was postponed.—H. Martin, *Hist. of France: Age*

of Louis XIV. (trans. by M. L. Booth), v. 1, ch. 4.

ALSO IN: A. F. Pontalis, *John de Witt*, ch. 7 (v. 1).

(Holland): A. D. 1668.—The Triple Alliance with England and Sweden against the French king.—“The rapid conquests of the French king in Flanders during the last summer had drawn the eyes of Europe towards the seat of war in that country. The pope, Clement IX., through pity for the young king of Spain, and the States, alarmed at the approach of the French arms to their frontier, offered their mediation. To both Louis returned the same answer, that he sought nothing more than to vindicate the rights of his wife; that he should be content to retain possession of the conquests which he had already made, or to exchange them either for Luxembourg, or Franche-comté, with the addition of Aire, St. Omer, Donai, Cambrai, and Charleroi, to strengthen his northern frontier. . . . But Spain was not sufficiently humbled to submit to so flagrant an injustice. . . . If it was the interest of England, it was still more the interest of the States, to exclude France from the possession of Flanders. Under this persuasion, sir William Temple, the resident at Brussels, received instructions to proceed to the Hague and sound the disposition of de Witt; and, on his return to London, was despatched back again to Holland with the proposal of a defensive alliance, the object of which should be to compel the French monarch to make peace with Spain on the terms which he had previously offered. . . . Temple acted with promptitude and address: . . . he represented the danger of delay; and, contrary to all precedent at the Hague, in the short space of five days—had the constitutional forms been observed it would have demanded five weeks—he negotiated [January, 1668] three treaties which promised to put an end to the war, or, if they failed in that point, to oppose at least an effectual barrier to the further progress of the invader. The first was a defensive alliance by which the two nations bound themselves to aid each other against any aggressor with a fleet of forty men of war, and an army of 6,400 men, or with assistance in money in proportion to the deficiency in men; by the second, the contracting powers agreed by every means in their power to dispose France to conclude a peace with Spain on the alternative already offered, to persuade Spain to accept one part of that alternative before the end of May, and, in case of a refusal, to compel her by war, on condition that France should not interfere by force of arms. These treaties were meant for the public eye: the third was secret, and bound both England and the States, in case of the refusal of Louis, to unite with Spain in the war, and not to lay down their arms till the peace of the Pyrenees were confirmed. On the same day the Swedish ambassadors gave a provisional, and afterwards a positive assent to the league, which from that circumstance obtained the name of the Triple Alliance. Louis received the news of this transaction with an air of haughty indifference. . . . In consequence of the infirm state of Charles II. of Spain, he had secretly concluded with the emperor Leopold an ‘eventual’ treaty of partition of the Spanish monarchy on the expected death of that prince, and thus had already bound himself by treaty to do the very thing which it

was the object of the allied powers to effect. . . . The intervention of the emperor, in consequence of the eventual treaty, put an end to the hesitation of the Spanish cabinet; the ambassadors of the several powers met at Aix-la-Chapelle [April–May, 1668]; Spain made her choice; the conquered towns in Flanders were ceded to Louis, and peace was re-established between the two crowns. . . . The States could ill dissemble their disappointment. They never doubted that Spain, with the choice in her hands, would preserve Flanders, and part with Franche-comté. . . . The result was owing, it is said, to the resentment of Castel-Rodrigo [the governor of the Spanish Netherlands], who, finding that the States would not join with England to confine France within its ancient limits, resolved to punish them by making a cession, which brought the French frontier to the very neighbourhood of the Dutch territory.”—J. Lingard, *Hist. of Eng.*, v. 11, ch. 6.—“Dr. Lingard, who is undoubtedly a very able and well-informed writer, but whose great fundamental rule of judging seems to be that the popular opinion on a historical question cannot possibly be correct, speaks very slightly of this celebrated treaty [of the Triple Alliance]. . . . But grant that Louis was not really stopped in his progress by this famous league; still it is certain that the world then, and long after, believed that he was so stopped; and that this was the prevailing impression in France as well as in other countries. Temple, therefore, at the very least, succeeded in raising the credit of his country, and lowering the credit of a rival power.”—Lord Macaulay, *Sir William Temple (Essays)*.

(Holland): A. D. 1670.—Betrayed to France by the English king. See ENGLAND: A. D. 1668-1670.

(Holland): A. D. 1672-1674.—The war with France and England.—Murder of the De Witts.—Restoration of the Stadtholdership.—“The storm that had been prepared in secret for Holland began to break in 1672. France and England had declared war at once by land and sea, without any cause of quarrel, except that Louis declared that the Dutch insulted him, and Charles complained that they would not lower their flag to his, and that they refused the Stadtholdership to his nephew, William of Orange. Accordingly, his fleet made a piratical attack on the Dutch ships returning from Smyrna, and Louis, with an immense army, entered Holland. . . . They [the French] would have attempted the passage of the Yssel, but the Dutch forces, under the Prince of Orange, were on the watch, and turned towards the Rhine, which was so low, in consequence of a drouth, that 2,000 adventurous cavalry were able to cross, half wading, half swimming, and gained a footing on the other side.” This “passage of the Rhine” was absurdly celebrated as a great military exploit by the servile flatterers of the French king. “The passage thus secured, the King crossed the river the next day on a bridge of boats, and rapidly overran the adjoining country, taking the lesser towns, and offering to the Republic the most severe terms, destructive of their independence, but securing the nominal

Stadtholdership to the Prince of Orange. The magistrates of Amsterdam had almost decided on carrying the keys to Louis, and the Grand Pensionary himself was ready to yield; but William, who preferred ruling a free people by their own choice to being imposed on them by the conqueror, still maintained that perseverance would save Holland, that her dykes, when opened, would admit floods that the enemy could not resist, and that they had only to be firm. The spirit of the people was with him, and in Amsterdam, Dordrecht, and the other cities, there were risings with loud outcries of 'Orange boven,' 'Up with Orange,' insisting that he should be appointed Stadtholder. The magistracy confirmed the choice, but Cornelius de Witt, too firm to yield to a popular cry, refused to sign the appointment, and thus drew on himself the rage of the people. He was arrested under an absurd accusation of having bribed a man to assassinate the Prince, and . . . [after torture] was sentenced to exile, whereupon his brother [the Grand Pensionary] announced that he should accompany him; but while he was with him in his prison at [the Hague], the atrocious mob again arose [Aug. 20, 1672], broke open the doors, and, dragging out the two brothers, absolutely tore them limb from limb."—C. M. Yonge, *Landmarks of Hist.*, pt. 3, ch. 4, pt. 6.—The Prince of Orange, profiting by the murder of the De Witts, rewarded the murderers, and is smirched by the deed, whether primarily responsible for it or not; but the power which it secured to him was used ably for Holland. The dykes had already been cut, on the 18th of June, and "the sea poured in, placing a waste of water between Louis and Amsterdam, and the province of Holland at least was saved. The citizens worked with the intensest energy to provide for their defence. . . . Every fourth man among the peasantry was enlisted; mariners and gunners were drawn from the fleet." Meantime, on the 7th of June, the fleet itself, under De Ruyter, had been victorious, in Southwold Bay, or Solebay, over the united fleets of England and France. The victory was indecisive, but it paralyzed the allied navy for a season, and prevented a contemplated descent on Zealand. "All active military operations against Holland were now necessarily at an end. There was not a Dutch town south of the inundation which was not in the hands of the French; and nothing remained for the latter but to lie idle until the ice of winter should enable them to cross the floods which cut them off from Amsterdam. Leaving Turenne in command, Louis therefore returned to St. Germain on August 1." Before winter came, however, the alarm of Europe at Louis' aggressions had brought about a coalition of the Emperor Leopold and the Elector of Brandenburg, to succor the Dutch States. Louis was forced to call Turenne with 16,000 men to Westphalia and Condé with 17,000 to Alsace. "On September 12 the Austrian general Montecuculi, the Duke of Lorraine, and the Grand Elector effected their junction, intending to cross the Rhine and join William;" but Turenne, by a series of masterly movements, forced them to retreat, utterly baffled, into Franconia and Halberstadt. The Elector of Brandenburg, discouraged, withdrew from the alliance, and made peace with Louis, June 6, 1673. The spring of 1673 found the French king advantageously situated, and his advantages were improved. Turning on the Spaniards in

their Belgian Netherlands, he laid siege to the important stronghold of Maestricht and it was taken for him by the skill of Vauban, on the 30th of June. But while this success was being scored, the Dutch, at sea, had frustrated another attempt of the Anglo-French fleet to land troops on the Zealand coast. On the 7th of June, and again on the 14th, De Ruyter and Van Tromp fought off the invaders, under Prince Rupert and D'Estrees, driving them back to the Thames. Once more, and for the last time, they made their attempt, on the 21st of August, and were beaten in a battle near the Zealand shore which lasted from daylight until dark. The end of August found a new coalition against Louis formed by treaties between Holland, Spain, the Emperor and the Duke of Lorraine. A little later, the Prince of Orange, after capturing Naarden, effected a junction near Bonn with Montecuculi, who had evaded Turenne. The Electors of Trèves and Mayence thereupon joined the coalition and Cologne and Munster made peace. By this time, public opinion in England had become so angrily opposed to the war that Charles was forced to arrange terms of peace with Holland, notwithstanding his engagements with Louis. The tide was now turning fast against France. Denmark had joined the coalition. In March it received the Elector Palatine; in April the Dukes of Brunswick and Lüneburg came into the league; in May the Emperor procured from the Diet a declaration of war in the name of the Empire, and on the 1st of July the Elector of Brandenburg cast in his lot once more with the enemies of France. To effectually meet this new league of his foes, Louis resolved with heroic promptitude to abandon his conquests in the Netherlands. Maestricht and Grave, alone, of the places he had taken, were retained. But Holland still refused to make peace on the terms which the French king proposed, and held her ground in the league.—O. Airy, *The Eng. Restoration and Louis XIV.*, ch. 19.

(Holland): A. D. 1674.—The Treaty of Westminster.—Peace with England.—Relinquishment of New Netherland.—An offer from the Dutch to restore New Netherland to England "was extorted from the necessities of the republic, and its engagement with Spain. With the consent of the States General, the Spanish ambassador offered advantageous articles to the British government. Charles, finding that Louis refused him further supplies, and that he could not expect any from Parliament, replied that he was willing to accept reasonable conditions. . . . Sir William Temple was summoned from his retirement, and instructed to confer with the Spanish ambassador at London, the Marquis del Fresno, to whom the States General had sent full powers. In three days all the points were arranged, and a treaty

was signed at Westminster [February 19, 1674] by Arlington and four other commissioners on the part of Great Britain, and by Fresno on the part of the United Netherlands. The honor of the flag, which had been refused by De Witt, was yielded to England; the Treaty of Breda was revived; the rights of neutrals guaranteed; and the commercial principles of the Triple Alliance renewed. By the sixth article it was covenanted that 'all lands, islands, cities, havens, castles and fortresses, which have been or shall be taken by one party from the other, during the time of this last unhappy war, whether in Europe or elsewhere, and before the expiration of the times above limited for the duration of hostilities, shall be restored to the former Lord and Proprietor in the same condition they shall be in at the time that this peace shall be proclaimed.' This article restored New Netherland to the King of Great Britain. The Treaty of Breda had ceded it to him on the principle of 'uti possidetis.' The Treaty of Westminster gave it back to him on the principle of reciprocal restitution. Peace was soon proclaimed at London and at the Hague. The treaty of Westminster delivered the Dutch from fear of Charles, and cut off the right arm of Louis, their more dreaded foe. England, on her part, slipped out of a disastrous war. . . . By the treaty of Westminster the United Provinces relinquished their conquest of New Netherland to the King of England. The sovereign Dutch States General had treated directly with Charles as sovereign. A question at once arose at Whitehall about the subordinate interest of the Duke of York. It was claimed by some that James's former American proprietorship was revived. . . . The opinion of counsel having been taken, they advised that the duke's proprietorship had been extinguished by the Dutch conquest, and that the king was now alone seized of New Netherland, by virtue of the Treaty of Westminster. . . . A new patent to the Duke of York was therefore sealed. By it the king again conveyed to his brother the territories he had held before, and granted him anew the absolute powers of government he had formerly enjoyed over British subjects, with the like additional authority over 'any other person or persons' inhabiting his province. Under the same description of boundaries, New Jersey, and all the territory west of the Connecticut River, together with Long Island and the adjacent islands, and the region of Pemaquid, were again included in the grant. The new patent did not, as has been commonly, but erroneously stated, 'recite and confirm the former.' It did not in any way allude to that instrument. It read as if no previous English patent had ever existed. . . . As his colonial lieutenant and deputy, the duke, almost necessarily, appointed Major Edmund Andros, whom the king had directed in the previous March to receive New Netherland from the Dutch."—J. R. Brodhead, *History of the State of New York*, v. 2, ch. 5-6.

(Holland): A. D. 1674-1678. — Continued war of the Coalition against France.—"The enemies of France everywhere took courage. . . . Louis XIV. embraced with a firm glance the whole position, and, well advised by Turenne, clearly took his resolution. He understood the extreme difficulty of preserving his conquests, and the facility moreover of making others more profitable, while defending his own

frontier. To evacuate Holland, to indemnify himself at the expense of Spain, and to endeavor to treat separately with Holland while continuing the war against the House of Austria,—such was the new plan adopted; an excellent plan, the very wisdom of which condemned so much the more severely the war with Holland. . . . The places of the Zuyder-Zee were evacuated in the course of December by the French and the troops of Münster. . . . The evacuation of the United Provinces was wholly finished by spring. . . . Louis resolved to conquer Franche-Comté in person; while Turenne covered Alsace and Lorraine, Schomberg went to defend Roussillon, and Condé labored to strengthen the French positions on the Meuse, by sweeping the enemy from the environs of Liege and Maestricht. On the ocean, the defensive was preserved." Louis entered Franche-Comté at the beginning of May with a small army of 8,000 infantry and 5,000 or 6,000 cavalry, but with Vauban, the great master of sieges, to do his serious work for him. A small corps had been sent into the country in February, and had already taken Gray, Vesoul and Lons-le-Saulnier. Besançon was now reduced by a short siege; Dole surrendered soon afterward, and early in July the subjugation of the province was complete. "The second conquest of Franche-Comté had cost a little more trouble than the first; but it was definitive. The two Burgundies were no more to be separated, and France was never again to lose her frontier of the Jura. . . . The allies, from the beginning of the year, had projected a general attack against France. They had debated among themselves the design of introducing two great armies, one from Belgium into Champagne, the other from Germany into Alsace and Lorraine; the Spaniards were to invade Roussillon; lastly, the Dutch fleet was to threaten the coasts of France and attempt some enterprise there. The tardiness of the Germanic diet to declare itself" frustrated the first of these plans. Condé, occupying a strong position near Charleroi, from which the allies could not draw him, took quick advantage of an imprudent movement which they made, and routed them by a fierce attack, at the village of Seneffe (Aug. 11, 1674). But William of Orange rallied the flying forces—Dutch, German and Spanish now fighting side by side—so successfully that Condé was repulsed with terrible loss in the end, when he attempted to make his victory complete. The battle was maintained, by the light of the moon, until midnight, and both armies withdrew next morning, badly crippled. Turenne meantime, in June, had crossed the Rhine at Philippsburg and encountered the Imperialists, on the 16th, near Sinshheim, defeated them there and driven them beyond the Neckar. The following month, he again crossed the river and inflicted upon the Palatinate the terrible destruction which made it for the time being a desert, and which is the black blot on the fame of the great soldier. "Turenne ordered his troops to consume and waste cattle, forage, and harvests, so that the enemy's army, when it returned in force, as he foresaw it would do, could find nothing whereon to subsist." In September the city of Strasburg opened its gates to the Imperialists and gave them the control of its fortified bridge, crossing the Rhine. Turenne, hastening to prevent the disaster, but arriving too

late, attacked his enemies, Oct. 4, at the village of Enslshelm and gained an inconclusive victory. Then followed, before the close of the year, the most famous of the military movements of Turenne. The allies having been heavily reinforced, he retired before them into Lorraine, meeting and gathering up reinforcements of his own as he moved. Then, when he had completely deceived them as to his intentions, he traversed the whole length of the Vosges with his army, in December, and appeared suddenly at Belfort, finding their forces scattered and entirely unprepared. Defeating them at Mülhausen December 29, and again at Colmar, January 5, he expelled them from Alsace, and offered to Strasburg the renewal of its neutrality, which the anxious city was glad to accept. "Thus ended this celebrated campaign, the most glorious, perhaps, presented in the military history of ancient France. None offers higher instruction in the study of the great art of war." In the campaign of 1675, which opened in May, Turenne was confronted by Montecuculi, and the two masterly tacticians became the players of a game which has been the wonder of military students ever since. "Like two valiant athletes struggling foot to foot without either being able to overthrow the other, Turenne and Montecuculi manœuvred for six weeks in the space of a few square leagues [in the canton of Ortnau, Swabia] without succeeding in forcing each other to quit the place." At length, on the 27th of July, Turenne found an opportunity to attack his opponent with advantage, in the defile of Salsbach, and was just completing his preparations to do so, when a cannon-ball from one of the enemy's batteries struck him instantly dead. His two lieutenants, who succeeded to the command, could not carry out his plans, but fought a useless bloody battle at Altenheim and nearly lost their army before retreating across the Rhine. Condé was sent to replace Turenne. Before he arrived, Strasburg had again given its bridge to the Imperialists and they were in possession of Lower Alsace; but no important operations were undertaken during the remainder of the year. In other parts of the wide war field the French suffered disaster. Marshal de Créquy, commanding on the Moselle, was badly defeated at Konaarbrück, August 11, and Trèves, which he defended, was lost a few weeks later. The Swedes, also, making a diversion in the north, as allies of France, were beaten back, at Fehrbellin—see SCANDINAVIAN STATES (SWEDEN): A. D. 1644-1697. But next year (1676) Louis recovered all his prestige. His navy, under the command of Duquesne and Tourville, fought the Dutch and Spaniards on equal terms, and defeated them twice in the Mediterranean, on the Sicilian coast. On land the main effort of the French was directed against the Netherlands. Condé, Bouchain and Aire were taken by siege; and Maestricht was successfully defended against Orange, who besieged it for nearly eight weeks. But Philippsburg, the most important French post on the Rhine, was lost, surrendering to the Duke of Lorraine. Early in 1677, Louis renewed his attacks on the Spanish Netherlands and took Valenciennes March 17, Cambrai April 4, and Saint-Omer April 20, defeating the Prince of Orange at Cassel (April 11) when he attempted to relieve the latter place. At the same time Créquy, unable to defend Lower Alsace, destroyed

it—burning the villages, leaving the inhabitants to perish—and prevented the allies, who outnumbered him, from making any advance. In November, when they had gone into winter-quarters, he suddenly crossed the Rhine and captured Freiburg. The next spring (1678) operations began early on the side of the French with the siege of Ghent. The city capitulated, March 9, after a short bombardment. The Spanish governor withdrew to the citadel, but "surrendered, on the 11th, that renowned castle built by Charles V. to hold the city in check. The city and citadel of Ghent had not cost the French army forty men." Ypres was taken the same month. Serious negotiations were now opened and the Peace of Nimeguen, between France and Holland, was signed August 11, followed early the next year by a general peace. The Prince of Orange, who opposed the peace, fought one bootless but bloody battle at Saint-Denis, near Mons, on the 14th of August, three days after it had been signed.—H. Martin, *Hist. of France: Age of Louis XIV.* (trans. by M. L. Booth), v. 1, ch. 5-6.—"It may be doubted whether Europe has fully realised the greatness of the peril she so narrowly escaped on this occasion. The extinction of political and mental freedom, which would have followed the extinction of the Dutch Republic, would have been one of the most disastrous defeats of the cause of liberty and enlightenment possible in the then condition of the world. . . . The free presses of Holland gave voice to the stifled thought and agony of mankind. And they were the only free presses in the world. But Holland was not only the greatest book mart of Europe, it was emphatically the home of thinkers and the birth-place of ideas. . . . The two men then living to whose genius and courage the modern spirit of mental emancipation and toleration owes its first and most arduous victories were Pierre Bayle and John Locke. And it is beyond dispute that if the French King had worked his will on Holland, neither of them would have been able to accomplish the task they did achieve under the protection of Dutch freedom. They both were forced to seek refuge in Holland from the bigotry which hunted them down in their respective countries. All the works of Bayle were published in Holland, and some of the earliest of Locke's writings appeared there also; and if the remainder saw the light afterwards in England, it is only because the Dutch, by saving their own freedom, were the means of saving that of England as well. . . . At least, no one can maintain that if Holland had been annihilated in 1672, the English revolution could have occurred in the form and at the time it did."—J. C. Morison, *The Reign of Louis XIV.* (Fortnightly Rev., March, 1874).

A. D. 1702-1704.—The War of the Spanish Succession: Marlborough's first campaigns.—“The campaign [of 1702] opened late in the Low Countries, owing, doubtless, to the death of king William. The elector of Bavaria, and his brother the elector of Cologne, took part with France. About the middle of April, the prince of Nassau-Saarbruck invested Keyserwerth, a place belonging to the latter elector, on the Rhine; whilst lord Athlone, with the Dutch army, covered the siege, in pursuance of the advice of lord Marlborough to the states. The place was strong; the French marshal Boufflers made efforts to relieve it; after a vigorous defence, it was carried by assault, with dreadful carnage, about the middle of June. Boufflers, unable to relieve Keyserwerth, made a rapid march to throw himself between Athlone and Nimeguen, with the view to carry that place by surprise; was defeated by a forced and still more rapid march of the Dutch, under Athlone, to cover it; and moved upon Cleves, laying the country waste with wanton barbarity along his line of march. Marlborough now arrived to take the command in chief. It was disputed with him by Athlone, who owed his military rank and the honours of the peerage to the favour of king William. Certain representatives of the states, who attended the army under the name of field deputies, thwarted him by their caution and incompetency; the Prussian and Hanoverian contingents refused to move without the orders of their respective sovereigns. Lord Marlborough, with admirable temper and adroitness, and, doubtless, with the ascendant of his genius, surmounted all these obstacles. The Dutch general cheerfully served under him; the confederates were reconciled to his orders; he crossed the Meuse in pursuit of the French; came within a few leagues of Boufflers' lines; and, addressing the Dutch field deputies who accompanied him,

said, in a tone of easy confidence, ‘I will now rid you of these troublesome neighbours.’ Boufflers accordingly retreated,—abandoning Spanish Guelderland, and exposing Venloo, Ruremonde, and even Liège, which he had made a demonstration to cover. The young duke of Burgundy, grandson of Louis XIV., and elder brother of the king of Spain, had commanded the French army in name. He now returned to Versailles; and Boufflers could only look on, whilst Marlborough successively captured Venloo, Ruremonde, and Liège. The navigation of the Meuse and communication with Maestricht was now wholly free; the Dutch frontier was secure; and the campaign terminated with the close of October. . . . The duke of Marlborough resumed his command in the Low Countries about the middle of spring. He found the French strong and menacing on every side. Marshal Villars had, like Marlborough, fixed the attention of Europe for the first time in the late campaign. He obtained a splendid victory over the prince of Baden at Fredlingen, near the Black Forest. That prince lost 3,000 men, his cannon and the field. . . . Villars opened this year's campaign by taking Kehl, passed through the Black Forest into Bavaria, and formed a junction with the elector; whilst the prince of Baden was kept in check by a French army under marshal Tallard. . . . The imperial general, count Styrum was now moving to join the prince of Baden with 20,000 men. Villars persuaded the elector to cross the Danube and prevent this junction; attacked the imperialists in the plain of Hochstedt near Donawert; and put them to the rout. The capture of Augsburg followed: the road was open to Vienna, and the emperor thought of abandoning the capital. . . . Holland was once more threatened on her frontier. Marshal Villerot, liberated by exchange, was again at the head of an army, and, in conjunction with Boufflers, commenced operations for recovering the ground and the strong places from which Marlborough had dislodged the French on the Meuse. The campaign had opened at this point of the theatre of war with the capture of Rheinfenberg. It was taken by the Prussians before the duke of Marlborough arrived. The duke's first operation was the capture of Bonne. He returned to the main army with the view to engage the French under Villerot. That marshal abandoned his camp, and retired within his lines of defence on the approach of the English general. Marlborough was prevented from attacking the French by the reluctance of the Dutch generals and the positive prohibition of the Dutch field deputies. . . . The only fruit of Marlborough's movement was the easy capture of Huy. Boufflers obtained the slight advantage of surprising and defeating the Dutch general Opdam near Antwerp. Marlborough, still embarrassed by the Dutch field deputies, to whose good intentions and limited views he bowed with a facility which only proves the extent of his superiority, closed the campaign with the acquisition of Limburg and Guelders. . . . In the beginning of . . . [1704] the emperor, threatened by the French and Bavarians in the very capital of the empire, implored aid from the queen; and on the 19th of April, the duke of Marlborough left England to enter upon a campaign memorable for . . . [the] victory of Blenheim. . . . On his arrival at the Hague, he proposed to the states

general to alarm France for her frontier by a movement on the Moselle. Their consent even to this slight hazard for their own security, was not easily obtained. Villeroy, who commanded in Flanders, soon lost sight of him; so rapid or so well masked were his movements; Tallard, who commanded on the Moselle, thought only of protecting the frontier of France; and Marlborough, to the amazement of Europe, whether enemies or allies, passed in rapid succession the Rhine, the Maine, and the Necker. Intercepted letters, and a courier from the prince of Baden, apprised him that the French were about to join the Bavarians through the defiles of the Black Forest, and march upon Vienna. He now threw off the mask, sent a courier to the states, acquainting them that he was marching to the succour of the empire by order of the queen of England, and trusted they would permit their troops to share the glory of his enterprise. The pensionary Heinsius alone was in his confidence; and the states, though taken by surprise, conveyed to him their sanction and confidence with the best grace. He met Prince Eugene for the first time at Mindesheim. Marlborough and Eugene are henceforth associated in the career of war and victory."—Sir J. Mackintosh, *The Hist. of England*, v. 9, ch. 4.

A. D. 1705.—The War of the Spanish Succession: A campaign spoiled.—After his campaign in Bavaria, with its great victory on the field of Blenheim (see GERMANY: A. D. 1704), Marlborough passed the winter in England and returned in the spring of 1705 to the Low Countries, where he had planned to lead, again, the campaign of the year. Prince Eugene was now in Italy, and the jealous, incapable Prince Louis of Baden, commanding the German army, was the coadjutor on whom he must depend. The latter assented to Marlborough's plans and promised co-operation. The Dutch generals and deputies also were reluctantly brought over to his views, which contemplated an invasion of France on the side of the Moselle. "Slight as were the hopes of any effective co-operation which Prince Louis gave, they were much more than he accomplished. When the time came he declared himself sick, threw up his command and set off to drink the waters of Schlangenbad. Count de Frise whom he named in his place brought to Marlborough only a few ragged battalions, and, moreover, like his principal, showed himself most jealous of the English chief. . . . Marlborough nevertheless took the field and even singly desired to give battle. But positive instructions from Versailles precluded Villars [the commander of the French] from engaging. He intrenched himself in an extremely strong position at Sirk, where it was impossible for an inferior army to assail him. And while the war was thus unprosperous on the Moselle, there came adverse tidings from the Meuse. Marshal Villeroy had suddenly resumed the offensive, had reduced the fortress of Huy,

had entered the city and invested the citadel of Liege." Marlborough, on this news, being applied to for immediate aid by the Dutch General Overkirk—the ablest and best of his colleagues—"set out the very next day on his march to Liege, leaving only a sufficient force as he hoped for the security of Treves." Villeroy "at once relinquished his design upon the citadel of Liege and fell back in the direction of Tongres, so that Marlborough and Overkirk effected their junction with ease. Marlborough took prompt measures to re-invest the fortress of Huy, and compelled it to surrender on the 11th of July. Applying his mind to the new sphere before him, Marlborough saw ground to hope that, with the aid of the Dutch troops, he might still make a triumphant campaign. The first object was to force the defensive lines that stretched across the country from near Namur to Antwerp, protected by numerous fortified posts and covered in other places by rivers and morasses, . . . now defended by an army of at least 60,000 men, under Marshal Villeroy and the Elector of Bavaria. Marlborough laid his plans before Generals Overkirk and Slangenberg as also those civilian envoys whom the States were wont to commission at their armies. But he found to his sorrow that for jealousy and slowness a Dutch deputy was fully a match for a German Margrave." He obtained with great difficulty a nominal assent to his plans, and began the execution of them; but in the very midst of his operations, and when one division of the Dutch troops had successfully crossed the river Dyle, General Slangenberg and the deputies suddenly drew back and compelled a retreat. Then Marlborough's "fertile genius devised another scheme—to move round the sources of the river [Dyle] and to threaten Brussels from the southern side. . . . On the 15th of August he began his march, as did also Overkirk in a parallel direction, and in two days they reached Genappe near the sources of the Dyle. There uniting in one line of battle they moved next morning towards Brussels by the main chaussée, or great paved road; their head-quarters that day being fixed at Frischermont, near the borders of the forest of Soignies. On the French side the Elector and Villeroy, observing the march of the allies, had made a corresponding movement of their own for the protection of the capital. They encamped behind the small stream of the Ische, their right and rear being partly covered by the forest. Only the day before they had been joined by Marsin from the Rhine, and they agreed to give battle sooner than yield Brussels. One of their main posts was at Waterloo. . . . It is probable, had a battle now ensued, that it would have been fought on the same, or nearly the same ground as was the memorable conflict a hundred and ten years afterwards. . . . But the expected battle did not take place." Once more the Dutch deputies and General Slangenberg interfered, refusing to permit their troops to engage; so that Marlborough was robbed of the opportunity for winning a victory which he confidently declared would have been greater than Blenheim. This practically ended the campaign of the year, which had been ruined and wasted throughout by the stupidity, the cowardice and the jealousies of the Dutch deputies and the general who counselled them.—Earl Stanhope, *Hist. of Eng.: Reign of Queen Anne*, ch. 6.—In Spain, a campaign of more

brillancy was carried on by Charles Mordaunt, Earl of Peterborough, in Catalonia. See SPAIN: A. D. 1705.

A. D. 1706-1707.—The War of the Spanish Succession: The Battle of Ramillies and its results.—"The campaign of 1706 was begun unusually late by Marlborough, his long stay on the Continent in the winter and his English political business detaining him in London till the end of April, and when he finally landed at the Hague his plans were still coloured by the remembrance of the gratuitous and intolerable hindrances which he had met with from his allies. . . . He had made up his mind to operate with Eugene in Italy, which, if he had done, there would probably have been seen what has not been seen for nearly two thousand years—a successful invasion of France from the south-east. But the kings of Prussia and Denmark, and others of the allies whom Marlborough thought he had propitiated, were as recalcitrant as the Dutch, and the vigorous action of Villars against the Margrave of Baden made the States-General more than ever reluctant to lose their sword and shield. So Marlborough was condemned to action on his old line of the Dyle, and this time fortune was less unkind to him. Secret overtures were made which induced him to threaten Namur, and as Namur was of all posts in the Low Countries that to which the French attached most importance, both on sentimental and strategical grounds, Villeroy was ordered to abandon the defensive policy which he had for nearly two years been forced to maintain, and to fight at all hazards. Accordingly the tedious operations which had for so long been pursued in this quarter were exchanged at once for a vigorous offensive and defensive, and the two generals, Villeroy with rather more than 60,000 men, Marlborough with that number or a little less, came to blows at Ramillies (a few miles only from the spot where the lines had been forced the year before) on May 23, 1706, or scarcely more than a week after the campaign had begun. Here, as before, the result is assigned by the French to the fault of the general. . . . The battle itself was one completely of generalship, and of generalship as simple as it was masterly. It was in defending his position, not in taking it up, that Villeroy lost the battle. . . . Thirteen thousand of the French and Bavarians were killed, wounded, and taken, and the loss of the allies, who had been throughout the attacking party, was not less than 4,000 men. . . . The Dutch, who bore the burden of the attack on Ramillies, had the credit of the day's fighting on the allied side, as the Bavarian horse had on that of the French. In hardly any of Marlborough's operations had he his hands so free as at Ramillies, and in none did he carry off a complete victory. . . . The strong places of Flanders fell before the allied army like ripe fruit. Brussels surrendered and was occupied on the fourth day after the battle, May 28. Louvain and Malines had fallen already. The French garrison precipitately left Ghent, and the Duke entered it on June 2. Oudenarde came in next day; Antwerp was summoned, expelled the French part of its garrison, and capitulated on September 7. And a vigorous siege in less than a month reduced Ostend, reputed one of the strongest places in Europe. In six weeks from the battle of Ramillies not a French soldier re-

mained in a district which the day before that battle had been occupied by a network of the strongest fortresses and a field army of 80,000 men. The strong places on the Lys and the Dender, tributaries of the Scheldt, gave more trouble, and Menin, a small but very important position, cost nearly half the loss of Ramillies before it could be taken. But it fell, as well as Dendermonde and Ath, and nothing but the recrudescence of Dutch obstruction prevented Marlborough from finishing the campaign with the taking of Mons, almost the last place of any importance held by the French north of their own frontier, as that frontier is now understood. But the difficulties of all generals are said to begin on the morrow of victory, and certainly the saying was true in Marlborough's case. . . . The Dutch were, before all things, set on a strong barrier or zone of territory, studded with fortresses in their own keeping, between themselves and France; the Emperor naturally objected to the alienation of the Spanish-Austrian Netherlands. The barrier disputes were for years the greatest difficulty which Marlborough had to contend with abroad, and the main theme of the objections to the war made by the adverse party at home. . . . It was in the main due, no doubt, to these jealousies and hesitations, strengthened by the alarm caused by the loss of the battle of Almanza in Spain, and by the threatened invasion of Germany under Villars, that made the campaign of 1707 an almost wholly inactive one. . . . The campaign of this year is almost wholly barren of any military operations interesting to anyone but the mere annalist of tactics."—G. Saintsbury, *Marlborough*, ch. 6.—In Spain, several sharp changes of fortune during two years terminated in a disastrous defeat of the allies at Almanza in April, 1707, by the Duke of Berwick. See SPAIN: A. D. 1706 and 1707; see, also, GERMANY: A. D. 1706-1711.—Earl Stanhope, *Hist. of Eng.: Reign of Queen Anne*, ch. 7 and 9.

A. D. 1708-1709.—The War of the Spanish Succession: Oudenarde and Malplaquet.—To the great satisfaction of Marlborough, Prince Eugene of Savoy was sent by the Emperor to co-operate with him, in the spring of 1708. The two generals met in April to discuss plans; after which Eugene returned into Germany to gather up the various contingents that would compose his army. He encountered many difficulties and delays, and was unable to bring his forces to the field until July. Marlborough, meantime, had been placed in a critical situation. "For whilst the English commander and Eugene had formed the plan to unite and overwhelm Vendôme, the Court of Versailles had, on its side, contemplated the despatch of a portion of the Army of the Rhine, commanded by the Elector of Bavaria and the Duke of Berwick, so to reinforce Vendôme that he might overwhelm Marlborough, and Berwick was actually on his march to carry out his portion of the plan." Prince Eugene crossed the Moselle on the 28th June, "reached Düren the 3rd July, and learning there that affairs were critical, hastened with an escort of Hussars, in advance of his army, to Brussels. On his arrival there, the 6th, he learned that the French had attacked and occupied the city of Ghent, and were then besieging the castle." The two commanders having met at Assche, to concert their movements, made haste to throw "a

reinforcement into the fortress of Oudenarde, then besieged by the French; and, convinced now that the conquest of that fortress by Vendôme would give him an unassailable position, they pushed forward their troops with all diligence to save it. The two armies united on the 8th. On the 9th they set out for Oudenarde, and crossed the Dender on the 10th. Before daybreak of the 11th Marlborough despatched General Cadogan with a strong corps to the Scheldt, to throw bridges over that river near Oudenarde and to reconnoitre the enemy. The main army followed at 7 o'clock." In the battle which ensued, Vendôme was hampered by the equal authority of the Duke of Burgundy—the king's grandson—who would not concur with his plans. "One after another the positions occupied by the French soldiers were carried. Then these took advantage of the falling night to make a retreat as hurried and disorderly as their defence had been wanting in tenacity. In no pitched battle, indeed, have the French soldiers less distinguished themselves than at Oudenarde. Fighting under a divided leadership, they were fighting virtually without leadership, and they knew it. The Duke of Burgundy contributed as much as either Marlborough or Eugene to gain the battle of Oudenarde for the Allies." The French army, losing heavily in the retreat, was rallied finally at Ghent. "The Allies, meanwhile, prepared to take advantage of their victory. They were within a circle commanded by three hostile fortresses, Ypres, Lille, and Tournay. After some consideration it was resolved, on the proposition of Eugene, that Lille should be besieged." The siege of Lille, the capital of French Flanders, fortified by the utmost skill and science of Vauban, and held by a garrison of 10,000 men under Marshal Boufflers, was a formidable undertaking. The city was invested on the 13th of August, and defended heroically by the garrison; but Vendôme, who would have attacked the besiegers, was paralyzed by the royal youth who shared his command. Lille, the town, was surrendered on the 22d of October and its citadel on the 9th of December. The siege of Ghent followed, and the capitulation of that city, on the 2d of January, 1709, closed the campaign. "The winter of 1709 was spent mainly in negotiations. Louis XIV. was humiliated, and he offered peace on terms which the Allies would have done well to accept." Their demands, however, rose too high, and the war went on. "It had been decided that the campaign in the Netherlands should be continued under the same skilful generals who had brought that of 1708 to so successful an issue. . . . On the 23rd of [June] . . . the allied army, consisting of 110,000 men, was assembled between Courtray and Menin. Marlborough commanded the left wing, about 70,000 strong; Eugene the right, about 40,000. Louis, on his side, had made extraordinary efforts. But even with these he had been able to put in the field an army only 80,000 strong [under Marshal Villars]. . . . Villars had occupied a position between Douai and the Lys, and had there thrown up lines, in the strengthening of which he found daily employment for his troops." Not venturing to attack the French army in its strong position, Marlborough and Eugene began operations by laying siege to Tournay. The town was yielded to them on the 30th of July and the

citadel on the 3d of September. They next turned their attention to Mons, which the French thought it necessary to save at any cost. The attempt which the latter made to drive the allied army from the position it had gained between themselves and Mons had its outcome in the terribly bloody battle of Malplaquet—"the bloodiest known till then in modern history. The loss of the victors was greater than that of the vanquished. That of the former amounted to from 18,000 to 20,000 men; the French admitted a loss of 7,000, but German writers raise it to 15,000. Probably it did not exceed 11,000.

. . . The results . . . were in no way proportionate to its cost. The French army retreated in good order, taking with it all its impedimenta, to a new position as strong as the former. There, under Berwick, who was sent to replace Villars, it watched the movements of the Allies. These resumed, indeed, the siege of Mons [which surrendered on the 20th of October]. . . . But this was the solitary result of the victory."—Col. G. B. Malleon, *Prince Eugene of Savoy*, ch. 10-11.

A. D. 1710-1712.—The War of the Spanish Succession: The last campaigns of Marlborough.—"As soon as it became clear that the negotiations [at Gertruydenberg] would lead to nothing, Eugene and Marlborough at once began the active business of the campaign. . . . Marlborough began . . . with the siege of Douai, the possession of which would be of the greatest importance to him. . . . In spite of Villars' boasts the French were unable to prevent the capture of Douai. . . . The campaign of 1710 was full of disappointment to Marlborough. He had hoped to carry the war into the heart of France. But after Douai fell, Villars so placed his army that [Marlborough] . . . was obliged to content himself with the capture of Bethune, St. Venant, and Aire. Heavy rains and a great deal of illness among his troops prevented further operations. Besides this, his energy was somewhat paralysed by the changes which had taken place in England," where the Duchess of Marlborough and the Whig party had lost the favor of the Queen, and the Tory opponents of Marlborough and the war had come into power.—L. Creighton, *Life of Marlborough*, ch. 15-16.—"In 1711, in a complicated series of operations round Arras, Marlborough, who was now alone, Eugene having been recalled to Vienna, completely outgeneraled Villars and broke through his lines. But he did not fight, and the sole result of the campaign was the capture of Bouchain at the cost of some 10,000 men, while no serious impression was made on the French system of defence. . . . Lille had cost 14,000; Tournay a number not exactly mentioned, but very large; the petty place of Aire 7,000. How many, malcontent Englishmen might well ask themselves, would it cost before Arras, Cambrai, Hesdin, Calais, Namur, and all the rest of the fortresses that studded the country, could be expected to fall? . . . Marlborough had himself, so to speak, spoilt his audience. He had given them four great vic-

tories in a little more than five years; it was perhaps unreasonable, but certainly not unnatural, that they should grow fretful when he gave them none during nearly half the same time. . . . The expense of the war was frightening men of all classes in England, and, independently of the more strictly political considerations, . . . it will be seen that there was some reason for wishing Marlborough anywhere but on or near the field of battle. He was got rid of none too honourably; restrictions were put upon his successor Ormond which were none too honourable either; and when Villars, freed from his invincible antagonist, had inflicted a sharp defeat upon Eugene at Denain, the military situation was changed from one very much in favour of the allies to one slightly against them, and so contributed beyond all doubt to bring about the Peace of Utrecht."—G. Saintsbury, *Marlborough*, ch. 7.

(Holland): A. D. 1713-1715.—Second Barrier Treaty with England.—Barrier arrangements with France and the Emperor.—Connected with the other arrangements concluded in the treaties negotiated at Utrecht, the States, in 1713, signed a new Barrier Treaty with England, "annulling that of 1709, and providing that the Emperor Charles should be sovereign of the Netherlands [heretofore the 'Spanish Provinces'], which, neither in the whole nor in the part, should ever be possessed by France. The States, on their side, were bound to support, if required, the succession of the Electress of Hanover to the throne of England. . . . By the treaty concluded between France and the States, it was agreed that . . . the towns of Menin, Tournay, Namur, Ypres, with Warneton, Poperingen, Comines and Werwyk, Furnes, Dixmuyde, and the fort of Knokke, were to be ceded to the States, as a barrier, to be held in such a manner as they should afterwards agree upon with the Emperor." In the subsequent arrangement, concluded with the Emperor in 1715, "he permitted the boundary on the side of Flanders to be fixed in a manner highly satisfactory to the States, who sought security rather than extent of dominion. By the possession of Namur they commanded the passage of the Sambre and Meuse; Tournay ensured the navigation of the Scheldt; Menin and Warneton protected the Leye; while Ypres and the fort of Knokke kept open the communication with Furnes, Nieuport and Dunkirk. . . . Events proved the barrier, so earnestly insisted upon, to have been wholly insufficient as a means of defence to the United Provinces, and scarcely worth the labour and cost of its maintenance."—C. M. Davies, *Hist. of Holland*, ch. 11 (v. 3).

(The Austrian Provinces): A. D. 1745.—The War of the Austrian Succession: Battle of Fontenoy.—French conquests.—In the spring of 1745, while events in the second Silesian War were still threatening to Frederick the Great (see AUSTRIA: A. D. 1744-1745), his allies, the French, though indifferent to his troubles, were doing better for themselves in the Netherlands. They had given to Marshal de Saxe, who commanded there, an army of 76,000 excellent troops. "As to the Allies, England had furnished her full contingent of 28,000 men, but Holland less than half of the 50,000 she had stipulated; there were but eight Austrian squadrons, and the whole body scarcely exceeded 50,000 fighting men. The nominal leader was the young Duke of Cumberland, but subject in a great measure to the control of an Austrian veteran, Marshal Konigsegg, and obliged to consult the Dutch commander, Prince de Waldeck. Against these inferior numbers and divided councils the French advanced in full confidence of victory, and, after various movements to distract the attention of the Allies, suddenly, on the 1st of May, invested Tournay. . . . To relieve this important city, immediately became the principal object with the Allies; and the States, usually so cautious, nay, timorous in their suggestions, were now as eager in demanding battle. . . . On the other hand, the Marschal de Saxe made most skilful dispositions to receive them. Leaving 15,000 infantry to cover the blockade of Tournay, he drew up the rest of his army, a few miles further, in an excellent position, which he strengthened with numerous works; and his soldiers were inspired by the arrival of the King and Dauphin, who had hastened from Paris to join in the expected action. The three allied generals, on advancing against the French, found them encamped on some gentle heights, with the village of Antoin and the river Scheldt on their right, Fontenoy and a narrow valley in their front, and a small wood named Barré on their left. The passage of the Scheldt, and, if needful, a retreat, were secured by the bridge of Calonne in the rear, by a tête de pont, and by a reserve of the Household Troops. Abbatis were constructed in the wood of Barré; redoubts between Antoin and Fontenoy; and the villages themselves had been carefully fortified and garrisoned. The narrow space between Fontenoy and Barré seemed sufficiently defended by cross fires, and by the natural ruggedness of the ground: in short, as the French officers thought, the strength of the position might bid defiance to the boldest assail-

ant. Nevertheless, the Allied chiefs, who had already resolved on a general engagement, drove in the French piquets and outposts on the 10th of May, New Style, and issued orders for their intended attack at daybreak. . . . At six o'clock on the morning of the 11th, the cannonade began. The Prince of Waldeck, and his Dutch, undertook to carry Antoin and Fontenoy by assault, while the Duke of Cumberland, at the head of the British and Hanoverians, was to advance against the enemy's left. His Royal Highness, at the same time with his own attack, sent General Ingoldsby, with a division, to pierce through the wood of Barré, and storm the redoubt beyond it." Ingoldsby's division and the Dutch troops were both repulsed, and the latter made no further effort. But the British and Hanoverians, leaving their cavalry behind and dragging with them a few field pieces, "plunged down the ravine between Fontenoy and Barré, and marched on against a position which the best Marshals of France had deemed impregnable, and which the best troops of that nation defended. . . . Whole ranks of the British were swept away, at once, by the murderous fire of the batteries on their left and right. Still did their column, diminishing in numbers not in spirit, steadily press forward, repulse several desperate attacks of the French infantry, and gain ground on its position. . . . The battle appeared to be decided: already did Marshal Königsegg offer his congratulations to the Duke of Cumberland; already had Mareschal de Saxe prepared for retreat, and, in repeated messages, urged the King to consult his safety and withdraw, while it was yet time, beyond the Scheldt." The continued inactivity of the Dutch, however, enabled the French commander to gather his last reserves at the one point of danger, while he brought another battery to bear on the head of the advancing British column. "The British, exhausted by their own exertions, mowed down by the artillery in front, and assailed by the fresh troops in flank, were overpowered. Their column wavered—broke—fell back. . . . In this battle of Fontenoy (for such is the name it has borne), the British left behind a few pieces of artillery, but no standards, and scarce any prisoners but the wounded. The loss in these, and in killed, was given out as 4,041 British, 1,762 Hanoverians, and only 1,544 Dutch; while on their part the French likewise acknowledged above 7,000." As the consequence of the battle of Fontenoy, not only Tournay, but Ghent, likewise, was speedily surrendered to the French. "Equal success crowned similar attempts on Bruges, on Oudenarde, and on Dendermonde, while the allies could only act on the defensive and cover Brussels and Antwerp. The French next directed their arms against Ostend, . . . which . . . yielded in fourteen days. . . . Meanwhile the events in Scotland [the Jacobite rebellion—see SCOTLAND: A. D. 1745-1746] were compelling the British government to withdraw the greater part of their force; and it was only the approach of winter, and the retreat of both armies into quarters, that obtained a brief respite for the remaining fortresses of Flanders."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713-1788, ch. 26 (v. 3).

A. D. 1746-1747.—The War of the Austrian Succession: French conquest of the Austrian provinces.—Humiliation of Holland.—The Stadtholdership restored.—"In the campaign in Flanders in 1746, the French followed up the successes which they had achieved in the previous year. Brussels, Antwerp, Mons, Charleroi, Namur, and other places successively surrendered to Marshal Saxe and the Prince of Conti. After the capture of Namur in September, Marshal Saxe, reuniting all the French forces, attacked Prince Charles of Lorraine at Raucoux [or Roucoux], between Liège and Viset, and completely defeated him, October 11; after which both sides went into winter quarters. All the country between the Meuse and the sea was now in the power of France, Austria retaining only Luxemburg and Limburg. . . . Ever since the year 1745 some negotiations had been going on between France and the Dutch for the re-establishment of peace. The States-General had proposed the assembling of a Congress to the Cabinet of Vienna, which, however, had been rejected. In September 1746, conferences had been opened at Breda, between France, Great Britain, and the States-General; but as Great Britain had gained some advantages at sea, the negotiations were protracted, and the Cabinets of London and Vienna had endeavoured to induce the Dutch to take a more direct and active part in the war. In this state of things the Court of Versailles took a sudden resolution to coerce the States-General. A manifest was published by Louis XV. April 17th 1747, filled with those pretexts which it is easy to find on such occasions: not, indeed, exactly declaring war against the Dutch Republic, but that he should enter her territories 'without breaking with her'; that he should hold in deposit the places he might conquer, and restore them as soon as the States ceased to succour his enemies. At the same time Count Löwendahl entered Dutch Flanders by Bruges, and seized in less than a month Sluys, Ysendick, Sas de Gand, Hulst, Axel, and other places. Holland had now very much declined from the position she had held a century before. There were indeed many large capitalists in the United Provinces, whose wealth had been amassed during the period of the Republic's commercial prosperity, but the State as a whole was impoverished and steeped in debt. . . . In . . . becoming the capitalists and money-lenders of Europe, they [the Dutch] had ceased to be her brokers and carriers. . . . Holland was no longer the entrepôt of nations. The English, the Swedes, the Danes, and the Hamburgers had appropriated the greater part of her trade. Such was the result of the long wars in which she had been engaged. . . . Her political consideration had dwindled equally with her commerce. Instead of pretending as formerly to be the arbiter of nations, she had become little more than the satellite of Great Britain; a position forced upon her by fear of France, and her anxiety to maintain her barriers against that encroaching Power. Since the death of William III., the republican or aristocratic party had again seized the ascendency. William III.'s collateral heir, John William Friso, had not been recognised as Stadtholder, and the Republic was again governed, as in the time of De Witt, by a Grand Pensionary and greffier. The dominant party had, however, become highly unpopular. It had sacrificed the

army to maintain the fleet, and the Republic seemed to lie at the mercy of France. At the approach of the French, consternation reigned in the provinces. The Orange party raised its head and demanded the re-establishment of the Stadtholdership. The town of Veere in Zeeland gave the example of insurrection, and William IV. of Nassau-Dietz, who was already Stadtholder of Friesland, Gröningen and Gelderland, was ultimately proclaimed hereditary Stadtholder, Captain-General and Admiral of the United Provinces. William IV. was the son of John William Friso, and son-in-law of George II., whose daughter, Anne, he had married. The French threatening to attack Maestricht, the allies under the Duke of Cumberland marched to Lawfeld in order to protect it. Here they were attacked by Marshal Saxe, July 2nd 1747, and after a bloody battle compelled to recross the Meuse. The Duke of Cumberland, however, took up a position which prevented the French from investing Maestricht. On the other hand, Löwendahl [a Swedish general in the French service] carried Bergen-op-Zoom by assault, July 16th." The following spring (1748), the French succeeded in laying siege to Maestricht, notwithstanding the presence of the allies, and it was surrendered to them on the 7th of May. "Negociations had been going on throughout the winter, and a Congress had been appointed to meet at Aix-la-Chapelle, whose first conference took place April 24th 1748." The taking of Maestricht was intended to stimulate these negotiations for peace, and it undoubtedly had that effect. The treaties which concluded the war were signed the following October.—T. H. Dyer, *Hist. of Modern Europe*, bk. 6, ch. 4 (v. 3).

(Holland): A. D. 1746-1787.—The restored Stadtholdership.—Forty years of peace.—War with England and trouble with Austria.—The razing of the Barriers.—Premature revolutions.—In their extremity, when the provinces of the Dutch Republic were threatened with invasion by the French, a cry for the House of Orange was raised once more. "The jealousies of Provincial magistratures were overborne, and in obedience to the voice of the people a Stadtholder again arose. William of Nassau Dietz, the heir to William III., and the successor to a line of Stadtholders who had ruled continuously in Friesland since the days of Philip II., was summoned to power. . . . William IV. had married, as William II. and William III. had done, the daughter of a King of England. As the husband of Anne, the child of George II., he had added to the consideration of his House; and he was now able to secure for his descendants the dignities to which he had himself been elected. The States General in 1747 declared that both male and female heirs should succeed to his honours. The constitution was thus in a measure changed, and the appointment of a hereditary chief magistrate appeared to many . . . to be a departure from the pure ideal of a Republic. The election of the new Stadtholder brought less advantage to his people than to his family. He could not recall the glorious days of the great ancestors who had preceded him. Without abilities for war himself, and jealous of those with whom he was brought in contact, he caused disunion to arise among the forces of the

allies. . . . When the terms at Aix La Chapelle restored their losses to the Dutch and confirmed the stipulations of previous treaties in their favour, it was felt that the Republic was indebted to the exertions of its allies, and not to any strength or successes of its own. It was well for the Republic that she could rest. The days of her greatness had gone by, and the recent struggle had manifested her decline to Europe. . . . The next forty years were years of peace. . . . When war again arrived it was again external circumstances [connected with the war between England and her revolted colonies in America] that compelled the Republic to take up arms. . . . She . . . contemplated, as it was discovered, an alliance with the American insurgents. The exposure of her designs drew on her a declaration of war from England, which was followed by the temporary loss of many of her colonies both in the East and West Indies. But in Europe the struggle was more equally sustained. The hostile fleets engaged in 1781 off the Dogger Bank; and the Dutch sailors fought with a success that made them claim a victory, and that at least secured them from the consequences of a defeat. The war indeed caused far less injury to the Republic than might have been supposed. . . . When she concluded peace in 1783, the whole of her lost colonies, with the one exception of Negapatam, were restored to her. But the occasion of the war had been made use of by Austria, and a blow had been meanwhile inflicted upon the United Provinces the fatal effect of which was soon to be apparent. The Emperor Joseph II. had long protested against the existence of the Barrier; and he had seized upon the opportunity to undo by an arbitrary act all that the blood and treasure of Europe had been lavished to secure. 'The Emperor will hear no more of Barriers,' wrote his minister; 'our connection with France has made them needless'; and the fortresses for which William III. had schemed and Marlborough had fought, were razed to the ground [1782]. Holland, unable at the moment to resist, withdrew her garrisons in silence; and Joseph, emboldened by his success, proceeded to ask for more [1784]. The rectification of the Dutch frontiers, the opening of the Scheldt, and the release for his subjects from the long-enforced restrictions upon their trade did not appear too much to him. But the spirit of the Dutch had not yet left them. They fired at the vessels which dared to attempt to navigate the Scheldt, and war again appeared imminent. The support of France, however, upon which the Emperor had relied, was now given to the Republic, and Joseph recognized that he had gone too far. The Barrier, once destroyed, was not to be restored; but the claims which had been put forward were abandoned upon the payment of money compensation by the States. The feverous age of revolution was now at hand, and party spirit, which had ever divided the United Provinces, and had been quickened by the intercourse and alliance with America during the war, broke out in an insurrection against the Stadtholder [William V.], which drove him from his country, and compelled him to appeal to Prussian troops for his restoration. Almost at the same time, in the Austrian provinces, a Belgic Republic was proclaimed [1787], the result in a great degree of imprudent changes which Joseph II. had

enforced. The Dutch returned to their obedience under Prussian threats [and invasion of Holland by an army of 30,000 men—September, 1787], and Belgium under the concessions of Leopold III. But these were the clouds foreshadowing the coming storm, beneath whose fury all Europe was to tremble.—C. F. Johnstone, *Historical Abstracts*, ch. 2.

(Holland): A. D. 1806-1810.—The Batavian Republic transformed into the Kingdom of Holland.—Louis Bonaparte made King.—His fidelity to the country offensive to Napoleon.—His abdication.—Annexation of Holland to

the French empire.—“While Bonaparte was the chief of the French republic, he had no objection to the existence of a Batavian republic in the north of France, and he equally tolerated the Cisalpine republic in the south. But after the coronation all the republics, which were grouped like satellites round the grand republic, were converted into kingdoms, subject to the empire, if not avowedly, at least in fact. In this respect there was no difference between the Batavian and Cisalpine republic. The latter having been metamorphosed into the kingdom of Italy, it was necessary to find some pretext for transforming the former into the kingdom of Holland. . . . The Emperor kept up such an extensive agency in Holland that he easily got up a deputation, soliciting him to choose a king for the Batavian republic. This submissive deputation came to Paris in 1806, to solicit the Emperor, as a favour, to place Prince Louis [Napoleon's brother] on the throne of Holland. . . . Louis became King of Holland much against his inclination, for he opposed the proposition as much as he dared, alleging as an objection the state of his health, to which certainly the climate of Holland was not favourable; but Bonaparte sternly replied to his remonstrance—‘It is better to die a king than live a prince.’ He was then obliged to accept the crown. He went to Holland accompanied by Hortense, who, however, did not stay long there. The new king wanted to make himself beloved by his subjects, and as they were an entirely commercial people, the best way to win their affections was . . . not to adopt Napoleon's rigid laws against commercial intercourse with England. Hence the first coolness between the two brothers, which ended in the abdication of Louis. I know not whether Napoleon recollected the motive assigned by Louis for at first refusing the crown of Holland, namely, the climate of the country, or whether he calculated upon greater submission in another of his brothers; but this is certain, that Joseph was not called from the throne of Naples to the throne of Spain, until after the refusal of Louis. . . . Before finally seizing Holland, Napoleon formed the project of separating from it Brabant and Zealand, in exchange for other provinces, the possession of which was doubtful: but Louis successfully resisted this first act of usurpation. Bonaparte was too intent on the great business in Spain, to risk any commotion in the north, where the declaration of Russia against Sweden already sufficiently occupied him. He therefore did not insist upon, and even affected indifference to the proposed augmentation of the territory of the empire. . . . But when he got his brother Joseph recognized, and when he had himself struck an important blow in the Peninsula, he began to change his tone to Louis. On the 20th of December [1808] he wrote to him a very remarkable letter, which exhibits the unreserved expression of that tyranny which he wished to exercise over all his family in order to make them the instruments of his despotism. He reproached Louis for not following his system of policy, telling him that he had forgotten he was a Frenchman, and that he wished to become a Dutchman. Among other things he said: . . . ‘I have been obliged a second time to prohibit trade with Holland. In this state of things we may consider ourselves really at war. In my speech to the legislative body I manifested

my displeasure; for I will not conceal from you, that my intention is to unite Holland with France. This will be the most severe blow I can aim against England, and will deliver me from the perpetual insults which the plotters of your cabinet are constantly directing against me. The mouths of the Rhine, and of the Meuse, ought, indeed, to belong to me. . . . The following are my conditions:—First, the interdiction of all trade and communication with England. Second. The supply of a fleet of fourteen sail of the line, seven frigates and seven brigs or corvettes, armed and manned. Third, an army of 25,000 men. Fourth. The suppression of the rank of Marshals. Fifth. The abolition of all the privileges of nobility, which is contrary to the constitution. Your Majesty may negotiate on these bases with the Duke de Cadore, through the medium of your minister; but be assured, that on the entrance of the first packet-boat into Holland, I will restore my prohibitions, and that the first Dutch officer who may presume to insult my flag, shall be seized and hanged at the main-yard. Your Majesty will find in me a brother if you prove yourself a Frenchman; but if you forget the sentiments which attach you to our common country, you cannot think it extraordinary that I should lose sight of those which nature has raised between us. In short, the union of Holland and France will be, of all things, most useful to France, Holland and the Continent, because it will be most injurious to England. This union must be effected willingly, or by force.' . . . Here the correspondence between the two brothers was suspended for a time; but Louis still continued exposed to new vexations on the part of Napoleon. About the end of 1809, the Emperor summoned to Paris the sovereigns who might be called his vassals. Among the number was Louis, who, however, did not shew himself very willing to quit his states. He called a council of his ministers, who were of opinion that for the interest of Holland he ought to make this new sacrifice. He did so with resignation. Indeed, every day passed on the throne was a sacrifice to Louis. . . . Amidst the general silence of the servants of the empire, and even of the kings and princes assembled in the capital, he ventured to say:—'I have been deceived by promises which were never intended to be kept. Holland is tired of being the sport of France.' The Emperor, who was unused to such language as this, was highly incensed at it. Louis had now no alternative, but to yield to the incessant exactions of Napoleon, or to see Holland united to France. He chose the latter, though not before he had exerted all his feeble power in behalf of the subjects whom Napoleon had consigned to him; but he would not be the accomplice of him who had resolved to make those subjects the victims of his hatred against England. . . . Louis was, however, permitted to return to his states, to contemplate the stagnating effect of the continental blockade on every branch of trade and industry, formerly so active in Holland. Distressed at witnessing evils to which he could apply no remedy, he endeavoured by some prudent remonstrances to avert the utter ruin with which Holland was threatened. On the 23rd of March, 1810, he wrote . . . [a] letter to Napoleon. . . . Written remonstrances were not more to Napoleon's taste than verbal ones at a time when, as I was informed by my friends,

whom fortune chained to his destiny, no one presumed to address a word to him, except to answer his questions. . . . His brother's letter highly roused his displeasure. Two months after he received it, being on a journey in the north, he addressed to Louis from Ostend a letter," followed in a few days by another in which latter he said: "'I want no more phrases and protestations. It is time I should know whether you intend, by your follies, to ruin Holland. I do not choose that you should again send a Minister to Austria, or that you should dismiss the French who are in your service. I have recalled my Ambassador, as I intend only to have a Chargé-d'affaires in Holland. The Sieur Serrurier, who remains there in that capacity, will communicate to you my intentions. My Ambassador shall no longer be exposed to your insults. Write to me no more those set phrases which you have been repeating for the last three years, and the falsehood of which is proved every day. This is the last letter I will ever write to you as long as I live.' . . . Thus reduced to the cruel alternative of crushing Holland with his own hands, or leaving that task to the Emperor, Louis did not hesitate to lay down his sceptre. Having formed this resolution, he addressed a message to the legislative body of the kingdom of Holland, explaining the motives of his abdication. . . . The French troops entered Holland under the command of the Duke de Reggio; and that Marshal, who was more King than the King himself, threatened to occupy Amsterdam. Louis then descended from his throne [July 1, 1810]. . . . Louis bade farewell to the people of Holland in a proclamation, after the publication of which he repaired to the waters of Toeplitz. There he was living in tranquil retirement, when he learnt that his brother had united Holland to the Empire [December 10, 1810]. He then published a protest. . . . Thus there seemed to be an end of all intercourse between these two brothers, who were so opposite in character and disposition. But Napoleon, who was enraged that Louis should have presumed to protest, and that in energetic terms, against the union of his kingdom with the empire, ordered him to return to France, whither he was summoned in his character of Constable and French Prince. Louis, however, did not think proper to obey this summons, and Napoleon, faithful to his promise of never writing to him again, ordered . . . [a] letter to be addressed to him by M. Otto, . . . Ambassador from France to Vienna," saying: "'The Emperor requires that Prince Louis shall return, at the latest, by the 1st of December next, under pain of being considered as disobeying the constitution of the empire and the head of his family, and being treated accordingly.'"—M. de Bourrienne, *Private Memoirs of Napoleon*, v. 4, ch. 2.

(Holland): A. D. 1813.—Expulsion of the French.—Independence regained.—Restoration of the Prince of Orange.—"The universal

fermentation produced in Europe by the deliverance of Germany [see GERMANY: A. D. 1812-1813, to 1813 (OCTOBER—DECEMBER)], was not long of spreading to the Dutch Provinces. The yoke of Napoleon, universally grievous from the enormous pecuniary exactions with which it was attended, and the wasting military conscriptions to which it immediately led, had been in a peculiar manner felt as oppressive in Holland, from the maritime and commercial habits of the people, and the total stoppage of all their sources of industry, which the naval war and long-continued blockade of their coasts had occasioned. They had tasted for nearly twenty years of the last drop of humiliation in the cup of the vanquished—that of being compelled themselves to aid in upholding the system which was exterminating their resources, and to purchase with the blood of their children the ruin of their country. These feelings, which had for years existed in such intensity, as to have rendered revolt inevitable but for the evident hopelessness at all former times of the attempt, could no longer be restrained after the battle of Leipsic had thrown down the colossus of French external power, and the approach of the Allied standards to their frontiers had opened to the people the means of salvation [see GERMANY: A. D. 1813 (OCTOBER) and (OCTOBER—DECEMBER)]. From the Hausa Towas the flame of independence spread to the nearest cities of the old United Provinces; and the small number of French troops in the country at once encouraged revolt and paved the way for external aid. At this period, the whole troops which Napoleon had in Holland did not exceed 6,000 French, and two regiments of Germans, upon whose fidelity to their colours little reliance could be placed. Upon the approach of the Allied troops under Bulow, who advanced by the road of Munster, and Winzingerode, who soon followed from the same quarter, the douaniers all withdrew from the coast, the garrison of Amsterdam retired, and the whole disposable force of the country was concentrated at Utrecht, to form a corps of observation, and act according to circumstances. This was the signal for a general revolt. At Amsterdam [Nov. 15], the troops were no sooner gone than the inhabitants rose in insurrection, deposed the Imperial authorities, hoisted the orange flag, and established a provisional government with a view to the restoration of the ancient order of things; yet not violently or with cruelty, but with the calmness and composure which attest the exercise of social rights by a people long habituated to their enjoyment. The same change took place, at the same time and in the same orderly manner, at Rotterdam, Dordrecht, Delft, Leyden, Haarlem, and the other chief towns; the people, everywhere, amidst cries of 'Orange Boven' and universal rapture, mounted the orange cockade, and reinstated the ancient authorities. . . . Military and political consequences of the highest importance immediately followed this uncontrollable outbreak of public enthusiasm. A deputation from Holland waited on the Prince Regent of England and the Prince of Orange, in London: the latter shortly after embarked on board an English line-of-battle ship, the Warrior, and on the 27th landed at Scheveling, from whence he proceeded to the Hague. Meantime the French troops and coast-guards, who had concentrated at Utrecht, seeing that the general effervescence was not as yet

supported by any solid military force, and that the people, though they had all hoisted the orange flag, were not aided by any corps of the Allies, recovered from their consternation, and made a general forward movement against Amsterdam. Before they got there, however, a body of 300 Cossacks had reached that capital, where they were received with enthusiastic joy; and this advanced guard was soon after followed by General Benkendorf's brigade, which, after travelling by post from Zwoll to Harderwyk, embarked at the latter place, and, by the aid of a favourable wind, reached Amsterdam on the 1st December. The Russian general immediately advanced against the forts of Mayder and Halfweg, of which he made himself master, taking twenty pieces of cannon and 600 prisoners; while on the eastern frontier, General Oppen, with Bulow's advanced guards, carried Dornbourg by assault on the 23d, and, advancing against Arnhem, threw the garrison, 3,000 strong, which strove to prevent the place being invested, with great loss back into the town. Next day, Bulow himself came up with the main strength of his corps, and, as the ditches were still dry, hazarded an escalade, which proved entirely successful; the greater part of the garrison retiring to Nimeguen, by the bridge of the Rhine. The French troops, finding themselves thus threatened on all sides, withdrew altogether from Holland: the fleet at the Texel hoisted the orange flag, with the exception of Admiral Verhuel, who, with a body of marines that still proved faithful to Napoleon, threw himself with honourable fidelity into the fort of the Texel. Amsterdam, amidst transports of enthusiasm, received the beloved representative of the House of Orange. Before the close of the year, the tricolour flag floated only on Bergen-op-zoom and a few of the southern frontier fortresses; and Europe beheld the prodigy of the seat of war having been transferred in a single year from the banks of the Niemen to those of the Scheldt."—Sir A. Alison, *Hist. of Europe*, 1789-1815, ch. 82 (v. 17).

A. D. 1830-1832.—Belgian revolt and acquisition of independence.—Dissolution of the kingdom of the Netherlands.—Creation of the kingdom of Belgium.—Siege of Antwerp citadel.—"In one sense the union" of Belgium with Holland, in the kingdom of the Netherlands created by the Congress of Vienna, "was defensible. Holland enjoyed more real freedom than any other Continental monarchy; and the Belgians had a voice in the government of the united territory. But, in another sense, the union was singularly unhappy. The phlegmatic Dutch Protestant was as indisposed to unite with the light-hearted Roman Catholic Belgian as the languid waters of the Saone with the impetuous torrent of the Rhone. Different as were the rivers, they met at last; and diplomatists probably hoped that Dutch and Belgians would simi-

larly combine. These hopes were disappointed, and the two people, incapable of union, endeavoured to find independent courses for themselves in separate channels. The grounds of Belgian dislike to the union were intelligible. Belgium had a population of 3,400,000 souls; Holland of only 2,000,000 persons. Yet both countries had an equal representation in the States-General. Belgium was taxed more heavily than Holland, and the produce of taxation went almost entirely into Dutch pockets. The Court, which was Dutch, resided in Holland. The public offices were in Holland. Four persons out of every five in the public service at home were Dutchmen. The army was almost exclusively commanded by Dutchmen. Dutch professors were appointed to educate the Belgian youths in Belgian schools, and a Dutch director was placed over the Bank of Brussels. The Court even endeavoured to change the language of the Belgian race, and to substitute Dutch for French in all judicial proceedings. The Belgians were naturally irritated. . . . On the 2nd of June, the States-General were dissolved; the elections were peacefully concluded; and the closest observers failed to detect any symptoms of the coming storm on the political horizon. The storm which was to overwhelm the union was, in fact, gathering in another country. The events of July [at Paris] were to shake Europe to the centre. 'On all sides crowns were falling into the gutter,' and the shock of revolution in Paris was felt perceptibly in Brussels. Nine years before the States-General had imposed a mouture, or tax upon flour. The tax had been carried by a very small majority; and the majority had been almost entirely composed of Dutch members. On the 25th of August, 1830, the lower orders in Brussels engaged in a serious riot, ostensibly directed against this tax. The offices of a newspaper, conducted in the interests of the Dutch, were attacked; the house of the Minister of Justice was set on fire; the wine and spirit shops were forced open; and the mob, maddened by liquor, proceeded to other acts of pillage. On the morning of the 26th of August the troops were called out and instructed to restore order. Various conflicts took place between the soldiers and the people; but the former gained no advantage over the rioters, and were withdrawn into the Place Royale, the central square of the town. Relieved from the interference of the military, the mob continued the work of destruction. Respectable citizens, dreading the destruction of their property, organised a guard for the preservation of order. Order was preserved; but the task of preserving it had converted Brussels into an armed camp. It had placed the entire control of the town in the hands of the inhabitants. Men who had unexpectedly obtained a mastery over the situation could hardly be expected to resign the power which events had given to them. They had taken up their arms to repress a mob; victors over the populace, they turned their arms against the Government, and boldly despatched a deputation to the king urging the concession of reforms and the immediate convocation of the States-General. The king had received the news of the events at Brussels with considerable alarm. Troops had been at once ordered to march on the city; and, on the 28th of August, an army of 6,000 men had encamped under its walls. The citizens, however, repre-

sented that the entrance of the troops would be a signal for the renewal of the disturbances; and the officer in command in consequence agreed to remain passively outside the walls. The king sent the Prince of Orange to make terms with his insurgent subjects. The citizens declined to admit the prince into the city unless he came without his soldiers. The prince, unable to obtain any modification of this stipulation, was obliged to trust himself to the people alone. It was already evident that the chief town of Belgium had shaken off the control of the Dutch Government. The king, compelled to submit to the demands of the deputation, summoned the States-General for the 13th of September. But this concession only induced the Belgians to raise their demands. They had hitherto only asked for reforms: they now demanded independence, the dissolution of the union, and the independent administration of Belgium. The revolution had originally been confined to Brussels: it soon extended to other towns. Civic guards were organised in Liege, Tournay, Mons, Verviers, Bruges, and other places. Imitating the example of Brussels, they demanded the dissolution of the union between Holland and Belgium. The troops, consisting of a mixed force of Dutch and Belgians, could not be depended on; and the restoration of the royal authority was obviously impossible. On the 13th of September the States-General met. The question of separation was referred to them by the king; and the Deputies leisurely applied themselves to its consideration, in conformity with the tedious rules by which their proceedings were regulated. Long before they had completed the preliminary discussions which they thought necessary the march of events had taken the question out of their hands. On the 19th of September fresh disturbances broke out in Brussels. The civic guard, attempting to quell the riot, was overpowered; and the rioters, elated with their success, announced their intention of attacking the troops, who were encamped outside the city walls. Prince Frederick of Orange, concluding that action was inevitable, at last made up his mind to attack the town. Dividing the forces under his command into six columns, he directed them, on the 23rd of September, against the six gates of the city. . . . Three of the columns succeeded, after a serious struggle, in obtaining possession of the higher parts of the city; but they were unable to accomplish any decisive victory. For four days the contest was renewed. On the 27th of September, the troops, unable to advance, were withdrawn from the positions which they had won. On the following day the Lower Chamber of the States-General decided in favour of a dissolution of the union. The crown of Belgium was evidently dropping into the gutter; but the king decided on making one more effort to preserve it in his family. On the 4th of October he sent the Prince of Orange to Antwerp, authorising him to form a separate Administration for the southern provinces of the kingdom, and to place himself at the head of it. . . . Arrangements of this character had, however, already become impossible. On the very day on which the prince reached Antwerp the Provisional Government at Brussels issued an ordinance declaring the independence of Belgium and the immediate convocation of a National Congress. . . . On the 10th of October,

the Provisional Government, following up its former ordonnance, issued a second decree, regulating the composition of the National Congress and the qualifications of the electors. On the 12th the elections were fixed for the 27th of October. On the 10th of November the Congress was formally opened; and on the 18th the independence of the Belgian people was formally proclaimed by its authority. . . . On the 4th of November the Ministers of the five great Continental powers, assembled in London at the invitation of the King of Holland, declared that an armistice should immediately be concluded, and that the Dutch troops should be withdrawn from Belgium. The signature of this protocol, on the eve of the meeting of the National Congress, virtually led to the independence of the Belgian people, which the Congress immediately proclaimed."—S. Walpole, *Hist. of England from 1815, ch. 11 (v. 2)*.—It still remained for the Powers to provide a king for Belgium, and to gain the consent of the Dutch and Belgian Governments to the territorial arrangements drawn up for them. The first difficulty was overcome in June, 1831, by the choice of Prince Leopold of Saxe Coburg to be king of Belgium. The second problem was complicated by strong claims on both sides to the Grand Duchy of Luxembourg. The Conference solved it by dividing the disputed territory between Belgium and Holland. The Belgians accepted the arrangement; the King of Holland rejected it, and was coerced by France and England, who expelled his forces from Antwerp, which he still held. A French army laid siege to the citadel, while an English fleet blockaded the river Scheldt. After a bombardment of 24 days, December, 1832, the citadel surrendered; but it was not until April, 1839, the final Treaty of Peace between Belgium and Holland was signed.—C. A. Fyffe, *Hist. of Modern Europe, v. 2, ch. 5*.

A. D. 1830-1884. — Peaceful years of the kingdoms of Belgium and Holland. — Constitutional and material progress. — The contest of Catholics and Liberals in Belgium. — "After winning its independence (1830) Belgium has also been free to work out its own career of prosperous development. King Leopold I. during his long reign showed himself the model of a constitutional sovereign in furthering its progress. The first railway on the continent was opened in 1835 between Brussels and Malines, and its railway system is now most complete. Its population between 1830 and 1880 increased by more than one-third, and now is the densest in all Europe, numbering 5,900,000 on an area only twice as large as Yorkshire. . . . When Napoleon III. seized on power in France all Belgians feared that he would imitate his uncle by seizing Belgium and all land up to the Rhine; but the close connection of King Leopold [brother of Prince Albert, the Prince Consort] with the English royal house and his skilful diplomacy averted the danger from Belgium. The chief internal trouble has been the strife between the liberal and clerical parties. In 1850 there were over 400 monasteries, with some 12,000 monks and nuns, in the land, and the Liberals made strenuous efforts for many years to abolish these and control education; but neither party could command a firm and lasting majority. In the

midst of these eager disputes King Leopold I. died (1865), after seeing his kingdom firmly established in spite of ministerial crises every few months. His son Leopold II. has also been a constitutional sovereign. In 1867 the Luxembourg question seemed to threaten the Belgian territory, for Napoleon III. had secretly proposed to Bismarck that France should take Belgium and Luxembourg, as well as all land up to the Rhine, as the price of his friendship to the new German Confederation [see GERMANY: A. D. 1866-1870]. . . . Again in 1870 the Franco-German war threw a severe strain on Belgium to guard its neutrality, but after Sedan this danger vanished. The strife between the liberal and clerical parties went on as fiercely in Belgium as in France itself, and after the rise and fall of many ministries the Liberals succeeded in closing the convents and gaining control over State education. The constitution is that of a limited monarchy with responsible ministers, Senate, and Chamber of Deputies. The electorate up to 1884 was limited to citizens paying 42 francs a year in direct taxes, but in 1884 it was extended by the clerical party acting for once in connection with the radicals." (On the revised constitution of 1893 see below: 1892-1893.) In the kingdom of the Netherlands (Holland), King William, after he had been forced to recognize Belgian independence, "abdicated [1840] in favour of his son. The latter soon restored a good understanding with Belgium, and improved the finances of his kingdom; so the upheavals of 1848 caused no revolution in Holland, and only led to a thorough reform of its constitution. The Upper House of the States-General consists of members chosen for nine years by the estates or councils of the provinces, those of the lower house by electors having a property qualification. The king's ministers are now responsible to the Parliament. Liberty of the press and of public worship is recognised. The chief questions in Holland have been the reduction of its heavy debt, the increase of its army and navy, the improvement of agriculture and commerce, and the management of large and difficult colonial possessions." Holland "has to manage 28,000,000 subjects over the seas, mostly in Malaysia. She there holds all Java, parts of Borneo, Sumatra, Timor, the Moluccas, Celebes, and the western half of New Guinea; in South America, Dutch Guiana and the Isle of Curaçoa. It was not till 1862 that the Dutch at a great cost freed the slaves in their West Indian possessions [viz., the islands of Curaçoa, Aruba, St. Martin, Bonaire, St. Eustache, and Saba]; but their rule in Malaysia is still conducted with the main purpose of securing revenue by means of an oppressive labour system. The Dutch claims in Sumatra are contested by the people of Acheen in the northern part of that great island."—J. II. Rose, *A Century of Continental History, ch. 43*.—"The politico-religious contest between Catholics and Liberals exists to a greater or less degree in all Catholic countries, and even in Protestant ones possessing, like Prussia, Catholic provinces: but nowhere is political life more completely absorbed by this antagonism than in Belgium, nowhere are the lines of the contest more clearly traced. . . . In order thoroughly to grasp the meaning of our politico-religious strife, we must cast a glance at its origin. We find this in the constitution adopted by the Congress after the Revolution of 1830. This constitution enjoins and sanc-

tions all the freedom and liberty which has long been the privilege of England, and of the States she has founded in America and Australia. A free press, liberty as regards education, freedom to form associations or societies, provincial and communal autonomy, representative administration—all exactly as in England. How was it that the Congress of 1830, the majority of whose members belonged to the Catholic party, came to vote in favour of principles opposed, not only to the traditions, but also the dogmas of the Catholic Church? This singular fact is explained by the writings of the celebrated priest and author, La Mennais, whose opinions at that time exercised the greatest influence. La Mennais's first book, 'L'Essai sur l'indifférence en Matière de Religion,' lowered all human reasoning, and delivered up society to the omnipotent guidance of the Pope. This work, enthusiastically perused by bishops, seminarists, and priests, established the author as an unprecedented authority. When, after the year 1828, he pretended that the Church would regain her former power by separating herself from the State, retaining only her liberty, most of his admirers professed themselves of his opinion. . . . Nearly all Belgian priests were at that time La Mennaisiens. They accepted the separation of Church and State, and, in their enthusiastic intoxication, craved but liberty to reconquer the world. It was thus that Catholics and Liberals united to vote for Belgium the constitution still in existence after a half-century. In 1832, Pope Gregory XVI., as Veuillot tells us, 'hurled a thunderbolt at the Belgian constitution in its cradle.' In a famous Encyclical, since incessantly quoted, the Pope declared, *ex cathedra*, that modern liberties were a plague, 'a delirium,' from whence incalculable evils would inevitably flow. Shortly afterwards, the true author of the Belgian constitution, La Mennais, having been to Rome in the vain hope of converting the Pope to his views, was repulsed, and, a little later, cast out from the bosom of the Church. The separation was effected. There was an end to that 'union' of Catholics and Liberals which had overthrown King William and founded a new political order in Belgium. It was not, however, till after 1838 that the two parties distinctly announced their antagonism. . . . The Liberal party is composed of all who, having faith in human reason and in liberty, fear a return to the past, and desire reforms of all sorts. . . . When Catholics are mentioned as opposed to Liberals, it is as regards their political, not their religious opinions. The Liberals are all, or nearly all, Catholics also; at all events by baptism. . . . The Catholic party is guided officially by the bishops. It is composed, in the first place, of all the clergy, of the convents and monasteries, and of those who from a sentiment of religious obedience do as they are directed by the bishop of the diocese and the Pope, and also of genuine Conservatives, otherwise called reactionists—that is to say, of those who consider that liberty leads to anarchy, and progress to communism. This section comprises the great mass of the proprietors and cultivators of the soil and the country populations. . . . We see that in Belgium parties are divided, and fight seriously for an idea; they are separated by no material, but by spiritual interests. The Liberals defend liberty, which they consider menaced by the aims of the Church. The Catholics defend

religion, which they look upon as threatened by their adversaries' doctrines. Both desire to fortify themselves against a danger, non-existent yet, but which they foresee. . . . The educational question, which has been the centre of the political life of the country during the last two years, deserves expounding in detail. Important in itself, and more important still in its consequences, it is everywhere discussed with passion. Primary education was organized here in 1842, by a law of compromise adopted by the two parties, thanks to M. J. B. Nothomb, one of the founders of the Belgian Constitution, who died recently in Berlin, where he had been Belgian Minister for a space of upwards of forty years. This law enacted that every parish should possess schools sufficient for the number of children needing instruction; but it allowed the 'commune' to adopt private schools. The inspection of the public schools and the control of the religious teaching given by the masters and mistresses, was reserved to the clergy. Advanced Liberals began to clamour for the suppression of this latter clause as soon as they perceived the preponderating influence it gave the priests over the lay teachers. The reform of the law of 1842 became the watchword of the Liberal party, and this was ultimately effected in July, 1879; now each parish or village must provide the schools necessary for the children of its inhabitants, and must not give support to any private school. Ecclesiastical inspection is suppressed. Religious instruction may be given by the ministers of the various denominations, in the school buildings, but out of the regular hours. This system has been in force in Holland since the commencement of the present century. Lay instruction only is given by the communal masters and mistresses; no dogmas are taught, but the school is open to the clergy of all denominations who choose to enter, as it is evidently their duty to do. This system, now introduced in Belgium, has been accepted, without giving rise to any difficulties, by both Protestants and Jews, but it is most vehemently condemned by the Catholic priesthood. . . . In less than a year they have succeeded in opening a private school in every commune and village not formerly possessing one. In this instance the Catholic party has shown a devotedness really remarkable. . . . At the same time in all the Churches, and nearly every Sunday, the Government schools have been attacked, stigmatized as '*écoles sans Dieu*' (schools without God), to be avoided as the plague, and where parents were forbidden to place their children, under pain of committing the greatest sin. Those who disobeyed, and allowed their children still to frequent the communal schools, were deprived of the Sacraments of the Church. They were refused absolution at confession, and the Eucharist, even at Easter. All the schoolmasters and mistresses were placed under the ban of the Church, and the priests often even refused to pronounce a blessing on their marriage. It is only lately that, contrary instructions having been received from Rome, this extreme step is now very rarely resorted to. The Liberal majority in the House has ordered a Parliamentary inquiry—which is still in progress, and the results of which in this last six months, fill the columns of our newspapers—in order to ascertain by what means the clergy succeed in filling their schools. . . . As a natural consequence of

the excessive heat of the conflict, the two parties end by justifying the accusations of their adversaries. The Liberals become anti-religionists, because religion is—and is daily becoming more and more—anti-liberal; and the Catholics are afraid of liberty, because it is used against their faith, which is, in their opinion, the only true and the necessary foundation of civilization. . . . The existence in Belgium of two parties so distinctly and clearly separated, offers, however, some compensation: it favours the good working of Parliamentary government.”—E. de Laveleye, *The Political Condition of Belgium (Contemporary Rev., April, 1882)*, pp. 715-724, with foot-note.

(Holland, or the Kingdom of the Netherlands): A. D. 1887.—Revision of the Constitution.—The constitution of 1848 (see above), in the Kingdom of the Netherlands, was revised in 1887, but in a very conservative spirit. Attempts to make the suffrage universal, and to effect a separation of church and state, were defeated. The suffrage qualification by tax-payment was reduced to ten guilders, and certain classes of lodgers were also admitted to the franchise, more than doubling the total number of voters, which is now estimated to be about 290,000. All private soldiers and non-commissioned officers of the regular army are excluded from the franchise. The upper chamber of the States General is elected as before by the Provincial States, but its membership is raised to fifty. The second chamber, consisting of one hundred members, is chosen directly by the voters. In the new constitution, the succession to the throne is definitely prescribed, in the event of a failure of direct heirs. Three collateral lines of descent are designated, to be accepted in their order as follows: 1. Princess Sophia of Saxony and her issue; 2. the descendants of the late Princess Marian of Prussia; 3. the descendants of the late Princess Mary of Wied. The late king of the Netherlands, William III., died in 1890, leaving only a daughter, ten years old, to succeed him. The young queen, Wilhelmina, is reigning under the regency of her mother.—*The Statesman's Year-book*, 1894.

(Belgium): A. D. 1892-1893.—The revised Belgian Constitution.—Introduction of plural Suffrage.—A great agitation among the Belgian workmen, ending in a formidable strike, in 1890, was only quieted by the promise from the government of a revision of the constitution and the introduction of universal suffrage. The Constituent Chambers, elected to perform the task of revision, were opened on the 11th of July, 1892. The amended constitution was promulgated on the 7th of September, 1893. It confers the suffrage on every citizen twenty-five years of age or over, domiciled in the same commune for not less than one year, and not under legal disqualification. The new constitution is made especially interesting by its introduction of a system of cumulative or plural voting. One supplementary vote is conferred on every married citizen (or widower), thirty-five years or more of age, having legitimate issue, and paying at least five francs per annum house tax; also on every citizen not less than twenty-five years old

who owns real property to the value of 2,000 francs, or who derives an income of not less than 100 francs a year from an investment in the public debt, or from the savings bank. Two supplementary votes are given to each citizen twenty-five years of age who has received certain diplomas or discharged certain functions which imply the possession of a superior education. The same citizen may accumulate votes on more than one of these qualifications, but none is allowed to cast more than three. On the adoption of the new constitution, the Brussels correspondent of the “London Times” wrote to that journal: “This article, which adds to manhood suffrage as it exists in France, Spain, Germany, Switzerland, the United States, and the Australian colonies, the safeguard of a double and triple suffrage accorded to age, marriage, and paternity, as well as to the possession of money saved or inherited, or of a profession, will constitute one of the distinguishing marks of the new Belgian Constitution. As it reposes upon the just principle that votes must be considered in reference to their weight rather than to their numbers, it has had the effect of putting an immediate end to the violent political crisis which disturbed the country. It has been accepted without much enthusiasm, indeed, but as a reasonable compromise. The moderates of all classes, who do not go to war for abstract theories, think that it has a prospect of enduring.” An attempt to introduce proportional representation along with the plural suffrage was defeated. The constitution of the Senate raised questions hardly less important than those connected with the elective franchise. Says the correspondent quoted above: “The advanced Radical and Socialist parties had proposed to supplement the Chamber, the political representation of the territorial interests of the country, by a Senate representing its economic interests. The great social forces—capital, labour, and science—in their application to agriculture, industry, and commerce, were each to send their representatives. It may be that this formula, which would have made of the Belgian Senate an Assembly sui generis in Europe, may become the formula of the future. The Belgian legislators hesitated before the novelty of the idea and the difficulty of its application. This combination rejected, there remained for the Senate only the alternative between two systems—namely, to separate that Assembly from the Chamber by its origin or else by its composition. The Senate and the Government preferred the first of these solutions, that is to say direct elections for the Chamber, an election by two degrees for the Senate, either by the members of the provincial councils or by specially elected delegates of the Communes. But these proposals encountered from all the benches in the Chamber a general resistance.” The result was a compromise. The Senate consists of 76 members elected directly by the people, and 26 elected by the provincial councils. The term of each is eight years. The Senators chosen by the councils are exempted from a property qualification; those popularly elected are required to be owners of real property yielding not less than 12,000 francs of income, or to pay not less than 1,200 francs in direct taxes. The legislature is empowered to restrict the voting for Senators to citizens thirty years of age or more. The members of the Chamber of Repre-

representatives are apportioned according to population and elected for four years, one half retiring every two years. The Senate and Chamber meet annually in November, and are required to be in session for at least forty days; but the King may convoke extraordinary sessions, and may dissolve the Chambers either separately or together. In case of a dissolution, the constitution requires an election to be held within forty

days, and a meeting of the Chambers within two months. Only the Chamber of Representatives can originate money bills or bills relating to the contingent for the army. The executive consists of seven ministries, namely of Finance, of Justice, of Interior and Instruction, of War, of Railways, Posts and Telegraphs, of Foreign Affairs, of Agriculture, Industry and Public Works. A. D. 1848-1864.—Acquisition from Mexico.—Silver discoveries.—Territorial and State organization.—“Ceded to the United States at the same time, and, indeed, as one with California [see MEXICO: A. D. 1848], this region of the Spanish domain had not, like that west of the Sierra Nevada, a distinctive name, but was described by local names, and divided into valleys. In March following the treaty with Mexico and the discovery of gold, the inhabitants of Salt Lake valley met and organized the state of Deseret, the boundaries of which included the whole of the recently acquired Mexican territory outside of California, and something more.” But Congress, failing to recognize the state of Deseret, created instead, by an act passed on the 9th of September, 1850, the Territory of Utah, with boundaries which embraced Nevada likewise. This association was continued until 1861, when the Territory of Nevada was organized by act of Congress out of western Utah. Meantime the discovery in 1859 of the extraordinary deposit of silver which became famous as the Comstock Lode, and other mining successes of importance, had rapidly attracted to the region a large population of adventurers. It was this which had brought about the separate territorial organization. Three years later the young territory was permitted to frame a state constitution and was admitted into the Union in October, 1864.—H. H. NEW ALBION, The County Palatine of.—By a royal charter, witnessed by the Deputy-General of Ireland, at Dublin, June 21, 1634, King Charles I. granted to Sir Edmund Plowden and eight other petitioners, the whole of

Long Island (“Manitie, or Long Isle”), together with forty leagues square of the adjoining continent, constituting the said domain a county palatine and calling it New Albion, while the island received the name of Isle Plowden. “In this document the boundaries of New Albion are so defined as to include all of New Jersey, Maryland, Delaware, and Pennsylvania embraced in a square, the eastern side of which, forty leagues in length, extended (along the coast) from Sandy Hook to Cape May, together with Long Island, and all other ‘isles and islands in the sea within ten leagues of the shores of the said region.’ The province is expressly erected into a county palatine, under the jurisdiction of Sir Edmund Plowden as earl, depending upon his Majesty’s ‘royal person and imperial crown, as King of Ireland.’” Subsequently, within the year 1634, the whole of the grant was acquired by and became vested in Plowden and his three sons. Sir Edmund, who died in 1659, spent the remainder of his life in futile attempts to make good his claim against the Swedes on the Delaware and the Dutch, and in exploiting his magnificent title as Earl Palatine of New Albion. The claim and the title seem to have reappeared occasionally among his descendants until some time near the close of the 18th century.—G. B. Keen, *Note on New Albion. A. D. 1620-1623.—Incorporation of the Council for New England, successor to the Plymouth Company.—Its great domain and its monopoly of the Fisheries.—“While the king was engaged in the overthrow of the London company [see VIRGINIA: A. D. 1622-1624], its more loyal rival in the West of England [the Plymouth company, or North Virginia branch of the Virginia company] sought new letters-patent, with a great enlargement of their domain. The remonstrances of the Virginia corporation and the rights of English commerce could delay for two years, but not defeat, the measure that was pressed by the friends of the monarch. On the 3d of November, 1620, King James incorporated 40 of his subjects—some of them members of his household and his government, the most wealthy and powerful of the English nobility—as ‘The Council established at Plymouth, in the county of Devon, for the planting, ruling, ordering, and governing New England in America.’ The territory, which was conferred on them in absolute property, with unlimited powers of legislation and government, extended from the 40th to the 48th degree of north latitude, and from the Atlantic to the Pacific. The grant included the fisheries; and a revenue was considered certain from a duty to be imposed on all tonnage employed in them. The patent placed emigrants to New England under the absolute authority of the corporation, and it was through grants from that plenary power, confirmed by the crown, that institutions the most favorable to colonial independence and the rights of mankind came into being. The French derided the action of the British monarch in bestowing lands and privileges which their own sovereign, seventeen years before, had appropriated. The English nation was incensed at the largess of im-

mense monopolies by the royal prerogative; and in April, 1621, Sir Edwin Sandys brought the grievance before the house of commons. . . . But the parliament was dissolved before a bill could be perfected. In 1622, five and thirty sail of vessels went to fish on the coasts of New England, and made good voyages. The monopolists appealed to King James, and he issued a proclamation, which forbade any to approach the northern coast of America, except with the leave of their company or of the privy council. In June, 1623, Francis West was despatched as admiral of New England, to exclude such fishermen as came without a license. But they refused to pay the tax which he imposed, and his ineffectual authority was soon resigned.”—G. Bancroft, *Hist. of the U. S. (Author's last rev.)*, pt. 1, ch. 13 (v. 1).

ALSO IN: C. Deane, *New England (Narrative and Critical Hist. of Am., v. 3, ch. 9)*.—Sir Ferdinando Gorges, *Brief Narration (Maine Hist. Soc. Coll., v. 2)*.

A. D. 1621-1631.—The grants made by the Council for New England.—Settlements planted.—Nova Scotia, Maine and New Hampshire conferred.—Captain John Mason, a native of King's Lynn, in Norfolk, became governor of Newfoundland in 1615. “While there he wrote a tract entitled ‘A Brief Discourse of the Newfoundland,’ and sent it to his friend Sir John Scot of Edinburgh, to peruse, and to print if he thought it worthy. It was printed in the year 1620. . . . In the spring or summer of 1621, Mason returned into England, and immediately found proof of the effect of his little tract. . . . Sir William Alexander, afterwards Earl of Stirling, immediately sought him out. He had been appointed Gentleman of the Privy Chamber to Prince Henry, honored with Knighthood, and was Master of Requests for Scotland. He invited Mason to his house, where he discussed with him a scheme of Scotch colouization, and he resolved to undertake settling a colony in what is now Nova Scotia. He begged Mason to aid him in procuring a grant of this territory from the Council for New England, it being within their limits. Mason referred him to Sir Ferdinando Gorges, one of the Council and their Treasurer. The king readily recommended Alexander to Gorges, and Gorges heartily approved the plan. In September, 1621, Alexander obtained a Royal Patent for a tract of land which he called New Scotland, a name attractive to his countrymen. This must have been gratifying to Mason, who had urged Scotch emigration in his tract printed only a year before. The Council for New England, established in November, 1620, was now granting and ready to grant to associations or to individuals parcels of its vast domain in America. . . . The second patent for land granted by the Council was to Capt. John Mason, bearing date March 9, 1621-2. It was all the land lying between the Naumkeag and the Merrimac rivers, extending back from the sea-coast to the heads of both of these rivers, with all the islands within three miles of the shore. Mason called this Mariana. This tract of territory lies wholly within the present bounds of Massachusetts. We now arrive at a period when Mason and Gorges have a joint interest in New England. On the 10th of August, 1622, the Council made

*The greater part of New England history is given elsewhere, as the history of the several New England states, and is only indexed in this place, instead of being repeated.

a third grant. This was to Gorges and Mason jointly of land lying upon the sea-coast between the Merrimac and the Kennebec rivers, extending three-score miles into the country, with all islands within five leagues of the premises to be, or intended to be, called the Province of Maine. Thus was the territory destined seven years later to bear the name of New Hampshire, first carved from the vast domain of New England, whose boundaries were fixed by the great circles of the heavens. Thus was Capt. Mason joint proprietor of his territory afterwards known as New Hampshire, before a single settler had built a cabin on the Pascataqua. Capt. Robert Gorges, son of Sir Ferdinando, was authorized to give the grantees possession of this new Province. Great enthusiasm on the subject of colonization now prevailed in England, extending from the king, through all ranks. . . . Before the year 1622 closed, the Council issued many patents for land, in small divisions, to persons intending to make plantations. Among the grants, is one to David Thomson and two associates, of land on the Pascataqua. The bounds and extent of this patent are unknown. Only the fact that such a patent was granted is preserved. . . . The Council for New England, in view of the many intended settlements, as well as the few already made, now proposed to set up a general government in New England. Capt. Robert Gorges, recently returned from the Venetian wars, was appointed Governor, with Capt. Francis West, Capt. Christopher Levett, and the governor of New Plymouth as his Council. Capt. Gorges arrived here the middle of September, 1623, having been preceded some months by Capt. West, who was Vice-Admiral of New England as well as Councillor. Capt. Levett came as late as November. . . . The next year, 1624, war between England and Spain broke out, and drew off for a while Gorges and Mason from their interests in colonization. Gorges was Captain of the Castle and Island of St. Nicholas, at Plymouth, a post that he had held for thirty years; and he was now wholly taken up with the duties of his office. Mason's services were required as a naval officer of experience. . . . In 1626 England plunged into a war with France, without having ended the war with Spain. Capt. Mason was advanced to be Treasurer and Paymaster of the English armies employed in the wars. There was no time now to think of American colonization. His duties were arduous. . . . In 1629 peace was made with France, and the war with Spain was coming to an end. No sooner were Gorges and Mason a little relieved from their public duties than they sprang at once to their old New England enterprise. They resolved to push forward their interests. They came to some understanding about a division of their Province of Maine. On the 7th of November, 1629, a day memorable in the history of New Hampshire, the Council granted to Mason a patent of all that part of the Province of Maine lying between the Merrimac and Pascataqua rivers; and Mason called it New Hampshire, out of regard to the favor in which he held Hampshire in England, where he had resided many years. . . . This grant had hardly been made when Champlain was brought to London, a prisoner, from Canada, by Kirke. The French had been driven from that region. Gorges and Mason procured immediately a grant from the

Council of a vast tract of land in the region of Lake Champlain, supposed to be not only a fine country for peltry, but to contain vast mineral wealth. The Province was called Laconia on account of the numerous lakes supposed or known to be there, and was the most northern grant hitherto made by the Council. The patent bears date Nov. 17, 1629, only ten days later than Mason's New Hampshire grant. . . . For the purpose of advancing the interests of Gorges and Mason in Laconia as well as on the Pascataqua, they joined with them six merchants in London, and received from the Council a grant dated Nov. 3, 1631, of a tract of land lying on both sides of the Pascataqua river, on the sea-coast and within territory already owned by Gorges and Mason in severalty. This patent, called the Pascataqua Patent, covered, on the west side of the river, the present towns of Portsmouth, New Castle, Rye and part of Greenland; on the east side, Kittery, Eliot, the Berwicks, and the western part of Lebanon."—C. A. D. 1635.—Dissolution of the Council for New England and partitioning of its territorial claims by lot.—"The Council for New England, having struggled through nearly fifteen years of maladministration and ill-luck, had yielded to the discouragements which beset it. By the royal favor, it had triumphed over the rival Virginia Company, to be overwhelmed in its turn by the just jealousy of Parliament, and by dissensions among its members. The Council, having, by profuse and inconsistent grants of its lands, exhausted its common property, as well as its credit with purchasers for keeping its engagements, had no motive to continue its organization. Under these circumstances, it determined on a resignation of its charter to the king, and a surrender of the administration of its domain to a General Governor of his appointment, on the condition that all the territory, a large portion of which by its corporate action had already been alienated to other parties [see above: A. D. 1621-1631], should be granted in severalty by the king to the members of the Council. Twelve associates accordingly proceeded to a distribution of New England among themselves by lot; and nothing was wanting to render the transaction complete, and to transfer to them the

ownership of that region, except to oust the previous patentees, of whom the most powerful body were colonists in Massachusetts Bay. To effect this, Sir John Banks, Attorney-General, brought a writ of 'quo warranto' in Westminster Hall against the Massachusetts Company [see MASSACHUSETTS: A. D. 1634-1637]. . . . It seemed that, when a few more forms should be gone through, all would be over with the presumptuous Colony. . . . But . . . everything went on as if Westminster Hall had not spoken. 'The Lord frustrated their design.' The disorders of the mother country were a safeguard of the infant liberty of New England."—J. G. Palfrey, *Hist. of New Eng.*, v. 1, ch. 10.—In the parcelling of New England by lot among the members of the Council, the divisions were: (1) Between the St. Croix and Pemaquid, to William Alexander. (2) From Pemaquid to Sagadahoc, in part to the Marquis of Hamilton. (3) Between the Kennebec and Androscoggin; and (4) from Sagadahoc to Piscataqua, to Sir F. Gorges. (5) From Piscataqua to the Naumkeag, to Mason. (6) From the Naumkeag round the sea-coast, by Cape Cod to Narragansett, to the Marquis of Hamilton. (7) From Narragansett to the half-way bound, between that and the Connecticut River, and 50 miles up into the country, to Lord Edward Gorges. (8) From this midway point to the Connecticut River, to the Earl of Carlisle. (9 and 10) From the Connecticut to the Hudson, to the Duke of Lennox. (11 and 12) From the Hudson to the limits of the Plymouth Company's territory, to Lord Mulgrave.—W. C. Bryant and S. H. Gay, *Hist. of the U. S.*, v. 1, p. 337, foot-note.

A. D. 1637.—The Pequot War.—"The region extending from the bounds of Rhode Island to the banks of the Hudson was at the time of the colonization held in strips of territory mainly by three tribes of the natives, who had long had feuds among themselves and with other tribes. They were the Narragansetts, the Mohegans, and the Pequots. The Mohegans were then tributaries of the Pequots, and were restive under subjection to their fierce and warlike conquerors, who were estimated to number at the time 1,000 fighting men. . . . The policy of the whites was to aggravate the dissensions of the tribes, and to make alliance with one or more of them. Winthrop records in March, 1631, the visit to Boston of a Connecticut Indian, probably a Mohegan, who invited the English to come and plant near the river, and who offered presents, with the promise of a profitable trade. His object proved to be to engage the interest of the whites against the Pequots. His errand was for the time unsuccessful. Further advances of a similar character were made afterwards, the result being to persuade the English that, sooner or later, they would need to interfere as umpires, and must use discretion in a wise regard to what would prove to be for their own interest. In 1633 the

Pequots had savagely mutilated and murdered a party of English traders, who, under Captain Stone, of Virginia, had gone up the Connecticut. The Boston magistrates had instituted measures to call the Pequots to account, but nothing effectual was done. The Dutch had a fort on the river near Hartford, and the English had built one at its mouth. In 1636 several settlements had been made in Connecticut by the English from Cambridge, Dorchester, and other places. John Oldham, of Watertown, had in that year been murdered, while on a trading voyage, by some Indians belonging on Block Island. To avenge this act our magistrates sent Endicott, as general, with a body of 90 men, with orders to kill all the male Indians on that island, sparing only the women and little children. He accomplished his bloody work only in part, but after destroying all the corn-fields and wigwams, he turned to hunt the Pequots on the main. After this expedition, which simply exasperated the Pequots, they made a desperate effort to induce the Narragansetts to come into a league with them against the English. It seemed for a while as if they would succeed in this, and the consequences would doubtless have been most disastrous to the whites. The scheme was thwarted largely through the wise and friendly intervention of Roger Williams, whose diplomaey was made effective by the confidence which his red neighbors had in him. The Narragansett messengers then entered into a friendly league with the English in Boston. All through the winter of 1637 the Pequots continued to pick off the whites in their territory, and they mutilated, tortured, roasted, and murdered at least thirty victims, becoming more and more vindictive and cruel in their doings. There were then in Connecticut some 250 Englishmen, and, as has been said, about 1,000 Pequot 'braves.' The authorities in Connecticut resolutely started a military organization, giving the command to the redoubtable John Mason, a Low-Country soldier, who had recently gone from Dorchester. Massachusetts and Plymouth contributed their quotas, having as allies the Mohegans, of whose fidelity they had fearful misgivings, but who proved constant though not very effective. Of the 160 men raised by Massachusetts, only about 20, under Captain Underhill,—a good fighter, but a sorry scamp,—reached the scene in season to join with Mason in surprising the unsuspecting and sleeping Pequots in one of their forts near the Mystic. Fire, lead, and steel with the infuriated vengeance of Puritan soldiers against murderous and fiendish heathen, did effectively the exterminating work. Hundreds of the savages, in their maddened frenzy of fear and dismay, were shot or run through as they were impaled on their own palisades in their efforts to rush from their blazing wigwams, crowded within their frail enclosures. The English showed no mercy, for they felt none. . . . A very few of the wretched savages escaped to another fort, to which the victorious English followed them. This, however, they soon abandoned, taking refuge, with their old people and children, in the protection of swamps and thickets. Here, too, the English, who had lost but two men killed, though they had many wounded, and who were now reinforced, pursued and surrounded them, allowing the aged and the children, by a parley, to come out. The men, however, were mostly slain, and

the feeble remnant of them which sought protection among the so-called river Indians, higher up the Connecticut, and among the Mohawks, were but scornfully received,—the Pequot sachem Sassacus, being beheaded by the latter. A few of the prisoners were sold in the West Indies as slaves, others were reduced to the same humiliation among the Mohegans, or as farm and house servants to the English. . . . But the alliances into which the whites had entered in order to divide their savage foes were the occasions of future entanglements in a tortuous policy, and of later bloody struggles of an appalling character. . . . In all candor the admission must be made, that the Christian white men . . . allowed themselves to be trained by the experience of Indian warfare into a savage cruelty and a desperate vengeancefulness."—G. E. Ellis, *The Indians of Eastern Mass. (Memorial Hist. of Boston, v. 1, pp. 252-254)*.—"More than 800 [of the Pequots] had been slain in the war, and less than 200 remained to share the fate of captives. These were distributed among the Narragansets and Mohegans, with the pledge that they should no more be called Pequots, nor inhabit their native country again. To make the annihilation of the race yet more complete, their very name was extinguished in Connecticut by legislative act. Pequot river was called the Thames, Pequot town was named New London."—S. G. Arnold, *Hist. of Rhode Island, v. 1, ch. 3*.

A. D. 1640-1644.—The growth of population and the rise of towns.—The end of the Puritan exodus.—"Over 20,000 persons are estimated to have arrived in New England in the fifteen years before the assembling of the Long Parliament [1640]; one hundred and ninety-eight ships bore them over the Atlantic; and the whole cost of their transportation, and of the establishment of the plantation, is computed at about £200,000, or nearly a million of dollars. The progress of settlement had been proportionally rapid. . . . Hingham was settled in 1634. Newbury, Concord, and Dedham were incorporated in 1635. And from that date to 1643, acts were passed incorporating Lynn, North Chelsea, Salisbury, Rowley, Sudbury, Braintree, Woburn, Gloucester, Haverhill, Wenham, and Hull. West of Worcester, the only town incorporated within the present limits of the state was Springfield, for which an act was passed in 1636. These little municipalities were, in a measure, peculiar to New England; each was sovereign within itself; each sustained a relation to the whole, analogous to that which the states of our Union hold respectively to the central power, or the constitution of the United States; and the idea of the formation of such communities was probably derived from the parishes of England, for each town was a parish, and each, as it was incorporated, was required to contribute to the maintenance of the ministry as the basis of its grant of municipal rights. Four counties were erected at this time: Suffolk, Essex, Middlesex,

and Old Norfolk, all which were incorporated in 1643. Each of the first three contained eight towns, and Old Norfolk six."—J. S. Barry, *Hist. of Mass., v. 1, ch. 8*.—"Events in England had now [1640] reached a crisis, and the Puritan party, rising rapidly into power, no longer looked to America for a refuge. The great tide of emigration ceased to flow; but the government of Massachusetts went on wisely and strongly under the alternating rule of Winthrop, Dudley, and Bellingham. The English troubles crippled the holders of the Mason and Gorges grants, and the settlements in New Hampshire—whither Wheelwright had gone, and where turbulence had reigned—were gradually added to the jurisdiction of Massachusetts. In domestic matters everything went smoothly. There was some trouble with Bellingham, and Winthrop was again made Governor [1642]. The oath of allegiance to the King taken by the magistrates was abandoned, because Charles violated the privileges of Parliament, and the last vestige of dependence vanished. Massachusetts was divided into counties; and out of a ludicrous contest about a stray pig, in which deputies and magistrates took different sides, grew a very important controversy as to the powers of deputies and assistants, which resulted [1644] in the division of the legislature into two branches, and a consequent improvement in the symmetry and solidity of the political system."—H. C. Lodge, *Short Hist. of the Eng. Colonies, ch. 18*.—See, also, TOWNSHIP AND TOWN-MEETING.

A. D. 1640-1655.—Colonizing enterprises of New Haven on the Delaware. See NEW JERSEY: A. D. 1640-1655.

A. D. 1643.—The confederation of the colonies.—In May, 1643, "a confederacy, to be known as the United Colonies of New England, was entered into at Boston, between delegates from Plymouth, Connecticut, and New Haven on the one hand, and the General Court of Massachusetts on the other. Supposed dangers from the Indians, and their quarrels with the Dutch of Manhattan, had induced the people of Connecticut to withdraw their formal objections to this measure. Two commissioners from each colony were to meet annually, or oftener, if necessary; the sessions to be held alternately at Boston, Hartford, New Haven, and Plymouth; but Boston was to have two sessions for one at each of the other places. The commissioners, all of whom must be church members, were to choose a president from among themselves, and everything was to be decided by six voices out of the eight. No war was to be declared by either colony without the consent of the commissioners, to whose province Indian affairs and foreign relations were especially assigned. The sustenance of the 'truth and liberties of the Gospel' was declared to be one great object of this alliance. All war expenses were to be a common charge, to be apportioned according to the number of male inhabitants in each colony. Runaway servants and fugitive criminals were to be delivered up, a provision afterward introduced into the Constitution of the United States; and the commissioners soon recommended, what remained ever after the practice of New England, and ultimately became, also, a provision of the United States Constitution, that judgments of courts of law and probates of wills in each colony should have full faith and credit in all the others.

The commissioners from Massachusetts, as representing by far the most powerful colony of the alliance, claimed an honorary precedence, which the others readily conceded. Plymouth, though far outgrown by Massachusetts, and even by Connecticut, had made, however, some progress. It now contained seven towns, and had lately adopted a representative system. But the old town of Plymouth was in decay, the people being drawn off to the new settlements. Bradford had remained governor, except for four years, during two of which he had been relieved by Edward Winslow, and the other two by Thomas Prince. New Haven was, perhaps, the weakest member of the alliance. Besides that town, the inhabitants of which were principally given to commerce, there were two others, Milford and Guilford, agricultural settlements; Southold, at the eastern extremity of Long Island, also acknowledged the jurisdiction of New Haven, and a new settlement had recently been established at Stamford. . . . The colony of Connecticut, not limited to the towns on the river, to which several new ones had already been added, included also Stratford and Fairfield, on the coast of the Sound, west of New Haven. . . . The town of Southampton, on Long Island, acknowledged also the jurisdiction of Connecticut. Fort Saybrook, at the mouth of the river, was still an independent settlement, and Fenwick, as the head of it, became a party to the articles of confederation. But the next year he sold out his interest to Connecticut, and into that colony Saybrook was absorbed. . . . Gorges's province of Maine was not received into the New England alliance, 'because the people there ran a different course both in their ministry and civil administration.' The same objection applied with still greater force to Aquiday and Providence."—R. Hildreth, *Hist. of the U. S.*, ch. 10 (v. 1).

A. D. 1674-1675.—King Philip's War: Its causes and beginning.—"The Pokanokets had always rejected the Christian faith and Christian manners, and their chief had desired to insert in a treaty, what the Puritans always rejected, that the English should never attempt to convert the warriors of his tribe from the religion of their race. The aged Massasoit—he who had welcomed the pilgrims to the soil of New England, and had opened his cabin to shelter the founder of Rhode Island—now slept with his fathers, and Philip, his son, had succeeded him as head of the allied tribes. Repeated sales of land had narrowed their domains, and the English had artfully crowded them into the tongues of land, as 'most suitable and convenient for them,' and as more easily watched. The principal seats of the Pokanokets were the peninsulas which we now call Bristol and Tiverton. As the English villages drew nearer and nearer to them, their hunting-grounds were put under culture, their natural parks were turned into pastures, their best fields for planting corn were gradually alienated, their fisheries were impaired by more skilful methods, till they found themselves deprived of their broad acres, and, by their own legal contracts, driven, as it were, into the sea. Collisions and mutual distrust were the necessary consequence. There exists no evidence of a deliberate conspiracy on the part of all the tribes. The commencement of war was accidental; many of the Indians were in a maze, not knowing what to do, and disposed to stand for the English; sure proof of no ripened conspiracy. But they had the same complaints, recollections, and fears; and, when they met, they could not but grieve together at the alienation of the domains of their fathers. They spurned the English claim of jurisdiction over them, and were indignant that Indian chiefs or warriors should be arraigned before a jury. And, when the language of their anger and sorrow was reported to the men of Plymouth colony by an Indian tale-bearer, fear professed to discover in their unguarded words the evidence of an organized conspiracy. The haughty Philip, who had once before been compelled to surrender his 'English arms' and pay an onerous tribute, was, in 1674, summoned to submit to an examination, and could not escape suspicion. The wrath of his tribe was roused, and the informer was murdered. The murderers, in their turn, were identified, seized, tried by a jury, of which one half were Indians, and, in June, 1675, on conviction, were hanged. The young men of the tribe panted for revenge; without delay, eight or nine of the English were slain in or about Swansey, and the alarm of war spread through the colonies. Thus was Philip hurried into 'his rebellion;' and he is reported to have wept as he heard that a white man's blood had been shed. . . . What chances had he of success? The English were united; the Indians had no alliance, and half of them joined the English, or were quiet spectators of the fight; the English had guns enough; few of the Indians were well armed, and they could get no new supplies; the English had towns for their shelter and safe retreat; the miserable wigwams of the natives were defenceless; the English had sure supplies of food; the Indians might easily lose their precarious stores. They rose without hope, and they fought without mercy. For them as a

nation there was no to-morrow. . . . At the first alarm, volunteers from Massachusetts joined the troops of Plymouth; on the twenty-ninth of June, within a week from the beginning of hostilities, the Pokanokets were driven from Mount Hope; and in less than a month Philip was a fugitive among the Nipmucks, the interior tribes of Massachusetts. The little army of the colonists then entered the territory of the Narragansetts, and from the reluctant tribe extorted a treaty of neutrality, with a promise to deliver up every hostile Indian. Victory seemed promptly assured. But it was only the commencement of horrors. Canonchet, the chief sachem of the Narragansetts, was the son of Miantonomoh; and could he forget his father's wrongs? Desolation extended along the whole frontier. Banished from his patrimony where the pilgrims found a friend, and from his cabin which had sheltered exiles, Philip and his warriors spread through the country, awakening their race to a warfare of extermination."—G. Bancroft, *Hist. of the U. S. (author's last rev.)*, pt. 2, ch. 5 (p. 1).—"At this time, according to loose estimates, there may have been some 36,000 Indians and 60,000 whites in New England; 10,000 of the former fit for war, and 15,000 of the latter capable of bearing arms. . . . At the outset, the Narragansetts, numbering 2,000 warriors, did not actually second Philip's resistance. But Canonchet, their sachem, might well remember the death of his father Miantonomo [who, taken prisoner in a war with the Mohegans, and surrendered by them to the English, in 1643, with a request for permission to put him to death, was deliberately returned to his savage captors, on advice taken from the ministers at Boston—doomed to death without his knowledge]. . . . No efforts at conciliation seem to have been made by either party; for the whites felt their superiority (were they not 'the Lord's chosen people?'); and Philip knew the desperate nature of the struggle between united and well-armed whites, and divided uncontrolled savages; yet when the emergency came he met it, and never faltered or plead from that day forth."—C. W. Elliott, *The New Eng. Hist.*, v. 1, ch. 40.

A. D. 1675 (July—September).—King Philip's War: Savage successes of the Indian enemy.—Increasing rage and terror among the colonists.—The Nipmucks, into whose country Philip retreated, "had already commenced hostilities by attacking Mendon. They waylaid and killed Captain Hutchinson, a son of the famous Mrs. Hutchinson, and 16 out of a party of 20 sent from Boston to Brookfield to parley with them. Attacking Brookfield itself, they burned it, except one fortified house. The inhabitants were saved by Major Willard, who, on information of their danger, came with a troop of horse from Lancaster, thirty miles through the woods, to their rescue. A body of troops presently arrived from the eastward, and were stationed for some time at Brookfield. The colonists now found that by driving Philip to extremity they had roused a host of unexpected enemies. The River Indians, anticipating an intended attack upon them, joined the assailants. Deerfield and Northfield, the northernmost towns

on the Connecticut River, settled within a few years past, were attacked and several of the inhabitants killed and wounded. Captain Beers, sent from Hadley to their relief with a convoy of provisions, was surprised near Northfield and slain, with 20 of his men. Northfield was abandoned and burned by the Indians. . . . Driven to the necessity of defensive warfare, those in command on the river determined to establish a magazine and garrison at Hadley. Captain Lathrop, who had been dispatched from the eastward to the assistance of the river towns, was sent with 80 men, the flower of the youth of Essex county, to guard the wagons intended to convey to Hadley 3,000 bushels of unthreshed wheat, the produce of the fertile Deerfield meadows. Just before arriving at Deerfield, near a small stream still known as Bloody Brook, under the shadow of the abrupt conical Sugar Loaf, the southern termination of the Deerfield mountain, Lathrop fell into an ambush, and, after a brave resistance, perished there with all his company. Captain Moseley, stationed at Deerfield, marched to his assistance, but arrived too late to help him. That town, also, was abandoned, and burned by the Indians. Springfield, about the same time, was set on fire, but was partially saved by the arrival of Major Treat, with aid from Connecticut. Hatfield, now the frontier town on the north, was vigorously attacked, but the garrison succeeded in repelling the assailants. Meanwhile, hostilities were spreading; the Indians on the Merrimac began to attack the towns in their vicinity; and the whole of Massachusetts was soon in the utmost alarm. Except in the immediate neighborhood of Boston, the country still remained an immense forest, dotted by a few openings. The frontier settlements . . . were mostly broken up, and the inhabitants, retiring towards Boston, spread everywhere dread and intense hatred of 'the bloody heathen.' Even the praying Indians, and the small dependent and tributary tribes, became objects of suspicion and terror. . . . Not content with realities sufficiently frightful, superstition, as usual, added bugbears of her own. Indian bows were seen in the sky, and scalps in the moon. The northern lights became an object of terror. Phantom horsemen careered among the clouds, or were heard to gallop invisible through the air. The howling of wolves was turned into a terrible omen. The war was regarded as a special judgment in punishment of prevailing sins. . . . About the time of the first collision with Philip, the Tarenteens, or Eastern Indians, had attacked the settlements in Maine and New Hampshire, plundering and burning the houses, and massacring such of the inhabitants as fell into their hands. This sudden diffusion of hostilities and vigor of attack from opposite quarters, made the colonists believe that Philip had long been plotting and had gradually matured an extensive conspiracy, into which most of the tribes had deliberately entered, for the extermination of the whites. This belief infuriated the colonists, and suggested some very questionable proceedings. . . . But there is no evidence of any deliberate concert; nor, in fact, were the Indians united. Had they been so, the war would have been far more serious. The Connecticut tribes proved faithful, and that colony remained untouched. Even the Narragansetts, the most powerful confederacy in New

England, in spite of so many former provocations, had not yet taken up arms. But they were strongly suspected of intention to do so, and were accused, notwithstanding their recent assurances, of giving aid and shelter to the hostile tribes."—R. Hildreth, *Hist. of the U. S.*, v. 1, ch. 14.

ALSO IN: R. Markham, *Hist. of King Philip's War*, ch. 7-8.—G. H. Hollister, *Hist. of Conn.*, v. 1, ch. 12.—M. A. Green, *Springfield, 1636-1886*, ch. 9.

A. D. 1675 (October—December).—**King Philip's War: The crushing of the Narragansetts.**—"The attitude of the powerful Narragansett tribe was regarded with anxiety. It was known that, so far from keeping their compact to surrender such enemies of the English as should fall into their hands, they had harbored numbers of Philip's dispersed retainers and allies. While the Federal Commissioners were in session at Boston [October], Canonchet, sachem of the Narragansetts, came thither with other chiefs, and promised that the hostile Indians whom they acknowledged to be then under their protection should be surrendered within ten days. But probably the course of events on Connecticut River emboldened them. At all events, they did not keep their engagement. The day for the surrender came and went, and no Indians appeared. If that faithless tribe, the most powerful in New England, should assume active hostilities, a terrible desolation would ensue. The Commissioners moved promptly. The fifth day after the breach of the treaty found them reassembled after a short recess. They immediately determined to raise an additional force of 1,000 men for service in the Narragansett country. They appointed Governor Winslow, of Plymouth, to be commander-in-chief, and desired the colony of Connecticut to name his lieutenant. The General was to place himself at the head of his troops within six weeks, 'a solemn day of prayer and humiliation' being kept through all the colonies meanwhile. . . . Time was thus given to the Narragansetts to make their peace 'by actual performance of their covenants made with the Commissioners; as also making reparation for all damages sustained by their neglect hitherto, together with security for their further fidelity.' . . . It is not known whether Philip was among the Narragansetts at this time. Under whatever influence it was, whether from stupidity or from confidence, they made no further attempt at pacification. . . . The Massachusetts troops marched from Dedham to Attleborough on the day before that which had been appointed by the Commissioners for them to meet the Plymouth levy at the northeastern corner of the Narragansett country. The following day they reached Seekonk. A week earlier, the few English houses at Quinsigamond (Worcester) had been burned by a party of natives; and a few days later, the house of Jeremiah Bull, at Pettyquamscott, which had been designated as the place of general rendezvous for the English, was fired, and ten men and five women and children, who had taken refuge in it, were put to death. . . . The place where the Narragansetts were to be sought was in what is now the town of South Kingston, 18 miles distant, in a northwesterly direction, from Pettyquamscott, and a little further from that Pequot fort to the southwest, which had been destroyed by the force under Captain Mason

forty years before. According to information afterwards received from a captive, the Indian warriors here collected were no fewer than 3,500. They were on their guard, and had fortified their hold to the best of their skill. It was on a solid piece of upland of five or six acres, wholly surrounded by a swamp. On the inner side of this natural defence they had driven rows of pallsades, making a barrier nearly a rod in thickness; and the only entrance to the enclosure was over a rude bridge consisting of a felled tree, four or five feet from the ground, the bridge being protected by a block-house. The English [whose forces, after a considerable delay of the Connecticut troops, had been all assembled at Pettyquamscott on Saturday, December 18], breaking up their camp [on the morning of the 19th] while it was yet dark, arrived before the place at one o'clock after noon. Having passed, without shelter, a very cold night, they had made a march of 18 miles through deep snow, scarcely halting to refresh themselves with food. In this condition they immediately advanced to the attack. The Massachusetts troops were in the van of the storming column; next came the two Plymouth companies; and then the force from Connecticut. The foremost of the assailants were received with a well-directed fire," and seven of their captains were killed or mortally wounded. "Nothing discouraged by the fall of their leaders, the men pressed on, and a sharp conflict followed, which, with fluctuating success, lasted for two or three hours. Once the assailants were beaten out of the fort; but they presently rallied and regained their ground. There was nothing for either party but to conquer or die, enclosed together as they were. At length victory declared for the English, who finished their work by setting fire to the wigwams within the fort. They lost 70 men killed and 150 wounded. Of the Connecticut contingent alone, out of 300 men 40 were killed and as many wounded. The number of the enemy that perished is uncertain. . . . What is both certain and material is that on that day the military strength of the formidable Narragansett tribe was irreparably broken."—J. G. Palfrey, *Compendious Hist. of New Eng.*, bk. 3, ch. 3 (v. 2).

ALSO IN: S. G. Arnold, *Hist. of Rhode Island*, v. 1, ch. 10.

A. D. 1676-1678.—**King Philip's War: The end of the conflict.**—"While the overthrow of the Narragansetts changed the face of things, it was far from putting an end to the war. It showed that when the white man could find his enemy he could deal crushing blows, but the Indian was not always so easy to find. Before the end of January Winslow's little army was partially disbanded for want of food, and its three contingents fell back upon Stonington, Boston, and Plymouth. Early in February the Federal Commissioners called for a new levy of 600 men to assemble at Brookfield, for the Nipmucks were beginning to renew their incursions, and after an interval of six months the figure of Philip again appears for a moment upon the scene. What he had been doing or where he had been, since the Brookfield fight in August, was never known. When in February, 1676, he reappeared, it was still in company with his allies the Nipmucks, in their bloody assault upon Lancaster. On the 10th of that month at sunrise the Indians came swarming into the lovely

village. Danger had already been apprehended, the pastor, Joseph Rowlandson, the only Harvard graduate of 1652, had gone to Boston to solicit aid, and Captain Wadsworth's company was slowly making its way over the difficult roads from Marlborough, but the Indians were beforehand. Several houses were at once surrounded and set on fire, and men, women, and children began falling under the tomahawk. The minister's house was large and strongly built, and more than forty people found shelter there until at length it took fire and they were driven out by the flames. Only one escaped, a dozen or more were slain, and the rest, chiefly women and children, taken captive. . . . Among the captives was Mary Rowlandson, the minister's wife, who afterward wrote the story of her sad experiences. . . . It was a busy winter and spring for these Nipmucks. Before February was over, their exploit at Lancaster was followed by a shocking massacre at Medfield. They sacked and destroyed the towns of Worcester, Marlborough, Mendon, and Groton, and even burned some houses in Weymouth, within a dozen miles of Boston. Murderous attacks were made upon Sudbury, Chelmsford, Springfield, Hatfield, Hadley, Northampton, Wrentham, Andover, Bridgewater, Scituate, and Middleborough. On the 18th of April Captain Wadsworth, with 70 men, was drawn into an ambush near Sudbury, surrounded by 500 Nipmucks, and killed with 50 of his men; six unfortunate captives were burned alive over slow fires. But Wadsworth's party made the enemy pay dearly for his victory; that afternoon 120 Nipmucks bit the dust. In such wise, by killing two or three for one, did the English wear out and annihilate their adversaries. Just one month from that day, Captain Turner surprised and slaughtered 300 of these warriors near the falls of the Connecticut river which have since borne his name, and this blow at last broke the strength of the Nipmucks. Meanwhile the Narragansetts and Wampanoags had burned the towns of Warwick and Providence. After the wholesale ruin of the great swamp fight, Canonchet had still some 600 or 700 warriors left, and with these, on the 26th of March, in the neighbourhood of Pawtuxet, he surprised a company of 50 Plymouth men, under Captain Pierce, and slew them all, but not until he had lost 140 of his best warriors. Ten days later, Captain Denison, with his Connecticut company, defeated and captured Canonchet, and the proud son of Miantonomo met the same fate as his father. He was handed over to the Mohegans and tomahawked. . . . The fall of Canonchet marked the beginning of the end. In four sharp fights in the last week of June, Major Talcott of Hartford slew from 300 to 400 warriors, being nearly all that were left of the Narragansetts; and during the month of July Captain Church patrolled the country about Taunton, making prisoners of the Wampanoags. Once more King Philip, shorn of his prestige, comes upon the scene. . . . Defeated at Taunton, the son of Massasoit was hunted by Church to his ancient lair at Bristol Neck and there, "betrayed by one of his own followers, he was surprised on the morning of August 12, and shot as he attempted to fly. "His severed head was sent to Plymouth, where it was mounted on a pole and exposed aloft upon the village green, while the meeting-house bell summoned the

townspeople to a special service of thanksgiving. . . . By midsummer of 1678 the Indians had been everywhere suppressed, and there was peace in the land. . . . In Massachusetts and Plymouth . . . the destruction of life and property had been simply frightful. Of 90 towns, 12 had been utterly destroyed, while more than 40 others had been the scene of fire and slaughter. Out of this little society nearly 1,000 staunch men . . . had lost their lives, while of the scores of fair women and poor little children that had perished under the ruthless tomahawk, one can hardly give an accurate account. . . . But . . . henceforth the red man figures no more in the history of New England, except as an ally of the French in bloody raids upon the frontier."—J. Fiske, *The Beginnings of New Eng.*, ch. 5.

A. D. 1684-1686.—The overthrow of the Massachusetts charter. See MASSACHUSETTS: A. D. 1671-1686.

A. D. 1685-1687.—The overthrow of the Connecticut charter. See CONNECTICUT: A. D. 1685-1687.

A. D. 1686.—The consolidation of the "Territory and Dominion of New England" under a royal governor-general.—"It was . . . determined in the Privy Council that Connecticut, New Plymouth, and Rhode Island should be united with Massachusetts, New Hampshire, Maine, and the Narragansett country, and be made 'one entire government, the better to defend themselves against invasion.' This was good policy for England. It was the despotic idea of consolidation. It was opposed to the republican system of confederation. . . . Consolidation was indeed the best mode of establishing in his colonies the direct government which Charles had adopted in November, 1684, and which James was now to enforce. . . . For more than twenty years James had been trying his 'prentice hand' upon New York. The time had now come when he was to use his master hand on New England. . . . By the advice of Sunderland, James commissioned Colonel Sir Edmund Andros to be captain general and governor-in-chief over his 'Territory and Dominion of New England in America,' which meant Massachusetts Bay, New Plymouth, New Hampshire, Maine, and the Narragansett country, or the King's Province. Andros's commission was drawn in the traditional form, settled by the Plantation Board for those of other royal governors in Virginia, Jamaica, and New Hampshire. Its substance, however, was much more despotic. Andros was authorized, with the consent of a council appointed by the crown, to make laws and levy taxes, and to govern the territory of New England in obedience to its sovereign's Instructions, and according to the laws then in force, or afterward to be established. . . . To secure Andros in his government, two companies of regular soldiers, chiefly Irish Papists, were raised in London and placed under his orders."—J. R. Brodhead, *Hist. of the State of New York*, v. 2, ch. 9.—See, also, MASSACHUSETTS: A. D. 1671-1686; and CONNECTICUT: A. D. 1685-1687.

A. D. 1702-1710.—Queen Anne's War (the Second Intercolonial War): Border incursions by the French and Indians.—The final conquest of Acadia.—“But a few years of peace succeeded the treaty of Ryswick. First came the contest in Europe over the Spanish succession,” and then the recognition of “the Pretender” by Louis XIV. “This recognition was, of course, a challenge to England and preparations were made for war. William III. died in March, 1702, and was succeeded by Anne, the sister of his wife, and daughter of James II. War was declared by England against France, May 15th, 1702. The contest that followed is known in European history as the War of the Spanish Succession; in American history it is usually called Queen Anne's War; or the Second Intercolonial War. On one side were France, Spain, and Bavaria; on the other, England, Holland, Savoy, Austria, Prussia, Portugal, and Denmark. It was in this war that the Duke of Marlborough won his fame. To the people of New England, war between France and England meant the hideous midnight war-whoop, the tomahawk and scalping-knife, burning hamlets, and horrible captivity. To provide against it, a conference was called to meet at Falmouth, on Casco Bay, in June, 1703, when Governor Dudley, of Massachusetts, met many of the chiefs of the Abenakis. The Indians, professing to have no thought of war, promised peace and friendship by their accustomed tokens. . . . But, as usual, only a part of the tribes had been brought into the alliance,” and some lawless provocations by a party of English marauders soon drove the Abenakis again into their old French Alliance. “By August, 500 French and Indians were assembled, ready for incursions into the New England settlements. They divided into several bands and fell upon a number of places at the same time. Wells, Saco, and Casco were again among the doomed villages, but the fort at Casco was not taken, owing to the arrival of an armed vessel under Captain Southwick. About 150 persons were killed or captured in these attacks.” In February, the town of Deerfield, Massachusetts, was destroyed, 47 of the inhabitants were killed and 112 carried away captive. “On the 30th of July, the town of Lancaster was assailed, and a few people were killed, seven buildings burned, and much property destroyed. These and other depredations of war-parties along the coasts filled New England with consternation. . . . It was . . . resolved to fit out an expedi-

tion for retaliation, and as usual the people of Acadia were selected to expiate the sins of the Indians and Canadians. Colonel Benjamin Church was put in command of 550 men, 14 transports, and 36 whale-boats, convoyed by three ships of war. Sailing from Boston in May, 1704,” Church ravaged the lesser French settlements on the Acadian coast, but ventured no attack on Port Royal. “In 1705, 450 men under Subercase—soldiers, Canadian peasants, adventurers, and Indians, well armed, and with rations for twenty days, blankets and tents—set out to destroy the English settlements in Newfoundland, marching on snow-shoes. They took Petit Havre and St. John's, and devastated all the little settlements along the eastern coast, and the English trade was for the time completely broken up. Subercase was made Governor of Acadia in 1706. The following spring New England sent Colonel March to Port Royal with two regiments, but he returned without assaulting the fort. Governor Dudley forbade the troops to land when they came back to Boston, and ordered them to go again. Colonel March was ill, and Colonel Wainwright took command; but after a pretence of besieging the fort for eleven days he retired with small loss, the expedition having cost Massachusetts £2,200. In 1708 a council at Montreal decided to send a large number of Canadians and Indians to devastate New England. But after a long march through the almost impassable mountain region of northern New Hampshire, a murderous attack on Haverhill, in which 30 or 40 were killed, was the only result. . . . In 1709 a plan was formed in England for the capture of New France by a fleet and five regiments of British soldiers aided by the colonists. But a defeat in Portugal called away the ships destined for America, and a force gathered at Lake Champlain under Colonel Nicholson for a land attack was so reduced by sickness—said to have resulted from the poisoning of a spring by Indians—that they burned their canoes and retreated. The next year, Nicholson was furnished with six ships of war, thirty transports, and one British and four New England regiments for the capture of Port Royal. Subercase had only 260 men and an insufficient supply of provisions.” He surrendered after a short bombardment, “and on the 16th of October the starving and ragged garrison marched out to be sent to France. For the last time the French flag was hauled down from the fort, and Port Royal was henceforth an English fortress, which was re-named Annapolis Royal, in honor of Queen Anne.”—R. Johnson, *Hist. of the French War*, ch. 8.—“With a change of masters came a change of names. Acadie was again called ‘Nova Scotia’—the name bestowed upon it by James I. in 1621; and Port Royal, ‘Annapolis.’”—R. Brown, *Hist. of the Island of Cape Breton*, letter 8.

A. D. 1744.—King George's War (the Third Intercolonial War): Hostilities in Nova Scotia.—“The war that had prevailed for several years between Britain and Spain [see ENGLAND: A. D. 1739-1741], inflicted upon the greater number of the British provinces of America no

farther share of its evils than the burden of contributing to the expeditions of Admiral Vernon, and the waste of life by which his disastrous naval campaigns were signalized. Only South Carolina and Georgia had been exposed to actual attack and danger. But this year [1744], by an enlargement of the hostile relations of the parent state, the scene of war was extended to the more northern provinces. The French, though professing peace with Britain, had repeatedly given assistance to Spain; while the British king, as Elector of Hanover, had espoused the quarrel of the emperor of Germany with the French monarch; and after various mutual threats and demonstrations of hostility that consequently ensued between Britain and France, war [the War of the Austrian Succession] was now formally declared by these states against each other [see AUSTRIA: A. D. 1718-1738, and after]. The French colonists in America, having been apprized of this event before it was known in New England, were tempted to improve the advantage of their prior intelligence by an instant and unexpected commencement of hostilities, which accordingly broke forth without notice or delay in the quarter of Nova Scotia. . . . On the island of Canso, adjoining the coast of Nova Scotia, the British had formed a settlement, which was resorted to by the fishermen of New England, and defended by a small fortification garrisoned by a detachment of troops from Annapolis. . . . Duquesnel, the governor of Cape Breton, on receiving intelligence of the declaration of war between the two parent states, conceived the hope of destroying the fishing establishments of the English by the suddenness and vigor of an unexpected attack. His first blow, which was aimed at Canso, proved successful (May 13, 1744). Duvivier, whom he despatched from his headquarters at Louisburg, with a few armed vessels and a force of 900 men, took unresisted possession of this island, burned the fort and houses, and made prisoners of the garrison and inhabitants. This success Duquesnel endeavoured to follow up by the conquest of Placentia in Newfoundland, and of Annapolis in Nova Scotia; but at both these places his forces were repulsed. In the attack of Annapolis, the French were joined by the Indians of Nova Scotia; but the prudent forecast of Shirley, the governor of Massachusetts, had induced the assembly of this province, some time before, to contribute a reinforcement of 200 men for the greater security of the garrison of Annapolis; and to the opportune arrival of the succour thus afforded the preservation of the place was ascribed. . . . The people of New England were stimulated to a pitch of resentment, apprehension, and martial energy, that very shortly produced an effort of which neither their friends nor their enemies had supposed them to be capable, and which excited the admiration of both Europe and America. . . . War was declared against the Indians of Nova Scotia, who had assisted in the attack upon Annapolis; all the frontier garrisons were reinforced; new forts were erected; and the materials of defence were enlarged by a seasonable gift of artillery from the king. Meanwhile, though the French were not prepared to prosecute the extensive plan of conquest which their first operations announced, their privateers actively waged a harassing naval warfare that greatly endamaged the commerce of New Eng-

land. The British fisheries on the coast of Nova Scotia were interrupted; the fishermen declared their intention of returning no more to their wonted stations on that coast; and so many merchant vessels were captured and carried into Louisburg in the course of this summer, that it was expected that in the following year no branch of maritime trade would be pursued by the New England merchants, except under the protection of convoy."—J. Grahame, *Hist. [Colonial] of the U. S.*, bk. 10, ch. 1 (v. 2).

ALSO IN: P. H. Smith, *Acadia*, pp. 123-128.

A. D. 1745.—King George's War.—The taking of Louisburg.—"Louisburg, on which the French had spent much money [see CAPE BRETON ISLAND: A. D. 1720-1745], was by far the strongest fort north of the Gulf of Mexico. But the prisoners of Canso, carried thither, and afterward dismissed on parole, reported the garrison to be weak and the works out of repair. So long as the French held this fortress, it was sure to be a source of annoyance to New England, but to wait for British aid to capture it would be tedious and uncertain, public attention in Great Britain being much engrossed by a threatened invasion. Under these circumstances, Shirley proposed to the General Court of Massachusetts the bold enterprise of a colonial expedition, of which Louisburg should be the object. After six days' deliberation and two additional messages from the governor, this proposal was adopted by a majority of one vote. A circular letter, asking aid and co-operation, was sent to all the colonies as far south as Pennsylvania. In answer to this application, urged by a special messenger from Massachusetts, the Pennsylvania Assembly . . . voted £4,000 of their currency to purchase provisions. The New Jersey Assembly . . . furnished . . . £2,000 toward the Louisburg expedition, but declined to raise any men. The New York Assembly, after a long debate, voted £3,000 of their currency; but this seemed to Clinton a niggardly grant, and he sent, besides, a quantity of provisions purchased by private subscription, and ten eighteen-pounders from the king's magazine. Connecticut voted 500 men, led by Roger Wolcott, afterward governor, and appointed, by stipulation of the Connecticut Assembly, second in command of the expedition. Rhode Island and New Hampshire each raised a regiment of 300 men; but the Rhode Island troops did not arrive till after Louisburg was taken. The chief burden of the enterprise, as was to be expected, fell on Massachusetts. In seven weeks an army of 3,250 men was enlisted, transports were pressed, and bills of credit were profusely issued to pay the expense. Ten armed vessels were provided by Massachusetts, and one by each of the other New England colonies. The command in chief was given to William Pepperell, a native of Maine, a wealthy merchant, who had inherited and augmented a large fortune acquired by his father in the fisheries; a popular, enterprising, sagacious man, noted for his universal good fortune, but unacquainted with military affairs, except as a militia officer. . . . The enterprise . . . assumed something of the character of an anti-Catholic crusade. One of the chaplains, a disciple of Whitfield, carried a hatchet, specially provided to hew down the images in the French churches. Eleven days after embarking at Boston [April, 1745], the Massachusetts armament assembled at Casco, to

wait there the arrival of the Connecticut and Rhode Island quotas, and the melting of the ice by which Cape Breton was environed. The New Hampshire troops were already there; those from Connecticut came a few days after. Notice having been sent to England and the West Indies of the intended expedition, Captain Warren presently arrived with four ships of war, and, cruising before Louisburg, captured several vessels bound thither with supplies. Already, before his arrival, the New England cruisers had prevented the entry of a French thirty-gun ship. As soon as the ice permitted, the troops landed and commenced the siege, but not with much skill, for they had no engineers. . . . Five unsuccessful attacks were made, one after another, upon an island battery which protected the harbor. In that cold, foggy climate, the troops, very imperfectly provided with tents, suffered severely from sickness, and more than a third were unfit for duty. But the French garrison was feeble and mutinous, and when the commander found that his supplies had been captured, he relieved the embarrassment of the besiegers by offering to capitulate. The capitulation [June 17] included 650 regular soldiers, and near 1,300 effective inhabitants of the town, all of whom were to be shipped to France. The island of St. John's presently submitted on the same terms. The loss during the siege was less than 150, but among those reluctantly detained to garrison the conquered fortress ten times as many perished afterward by sickness. In the expedition of Vernon and this against Louisburg perished a large number of the remaining Indians of New England, persuaded to enlist as soldiers in the colonial regiments. Some dispute arose as to the relative merits of the land and naval forces, which had been joined during the siege by additional ships from England. Pepperell, however, was made a baronet, and both he and Shirley were commissioned as colonels in the British army. Warren was promoted to the rank of rear admiral. The capture of this strong fortress, effected in the face of many obstacles, shed, indeed, a momentary luster over one of the most unsuccessful wars in which Britain was ever engaged."—R. Hildreth, *Hist. of the U. S.*, ch. 25 (v. 2).—"As far as England was concerned, it [the taking of Louisburg] was the great event of the war of the Austrian succession. England had no other success in that war to compare with it. As things turned out, it is not too much to say that this exploit of New England gave peace to Europe."—J. G. Palfrey, *Hist. of New Eng.*, bk. 5, ch. 9 (v. 5).—"Though it was the most brilliant success the English achieved during the war, English historians scarcely mention it."—R. Johnson, *Hist. of the French War*, ch. 9.

A. D. 1745-1748.—King George's War: The mortifying end.—Treaty of Aix-la-Chapelle, and restoration of Louisburg to France.—"Elated by their success [at Louisburg], the Provincials now offered to undertake the conquest of Canada; but the Duke of Bedford, to

whom Governor Shirley's plan had been submitted, disapproved of it, as exhibiting to the colonists too plainly their own strength. . . . He therefore advised to place the chief dependence on the fleet and army to be sent from England, and to look on the Americans as useful only when joined with others. Finally, the Whigs determined to send a powerful fleet to Quebec, at the same time that an army should attack Montreal, by the route of Lake Champlain; and so late as April, 1746, orders were issued to the several governors to levy troops without limitation, which, when assembled on the frontiers, the king would pay. From some unknown cause, the plan was abandoned as soon as formed. The general appointed to the chief command was ordered not to embark, but the instructions to enlist troops had been transmitted to America, and were acted on with alacrity. Massachusetts raised 3,500 men to co-operate with the fleet, which, however, they were doomed never to see. After being kept a long time in suspense, they were dispersed, in several places, to strengthen garrisons which were supposed to be too weak for the defenses assigned them. Upward of 3,000 men, belonging to other colonies, were assembled at Albany, undisciplined, without a commissariat, and under no control. After the season for active operations was allowed to pass away, they disbanded themselves, some with arms in their hands demanding pay of their governors, and others suing their captains. In addition to this disgraceful affair, the Provincials had the mortification to have a large detachment of their men cut off in Lower Horton, then known as Minas, situated nearly in the centre of Nova Scotia. The Canadian forces, which had traveled thither to co-operate with an immense fleet expected from France, determining to winter in that province, rendered it a subject of continued anxiety and expense to Massachusetts. Governor Shirley resolved, after again reinforcing the garrison at Annapolis, to drive them from the shores of Minas Basin, where they were seated; and in the winter of the year 1746, a body of troops was embarked at Boston for the former place. After the loss of a transport, and the greatest part of the soldiers on board, the troops arrived, and re-embarked for Grand Pré in the district of Minas, in the latter end of December. . . . The issue was, that being cantoned at too great distances from each other, La Corne, a commander of the French, having intelligence of their situation, forced a march from Schiegnieto, through a most tempestuous snow-storm, and surprised them at midnight. After losing 160 of their men, in killed, wounded and prisoners, the party were obliged to capitulate, not, however, on dishonorable terms, and the French, in their turn, abandoned their post. On the 8th of May, 1749, peace was proclaimed at Boston [according to the terms of the Treaty of Aix-la-Chapelle, concluded October 7, 1748], much to the mortification of the Provincials; Cape Breton was restored to France; and Louisburg, which had created so much dread, and inflicted such injuries on their commerce, was handed over to their inveterate enemies, to be rendered still stronger by additional fortifications. The French also obtained the islands of St. Pierre and Michelon, on the south coast of Newfoundland, as stations for their fisheries." England reimbursed the colonies to the extent of £183,000 for the expenses

of their vain conquest of Louisburg, and £135,000 for their losses in raising troops under the orders that were revoked.—T. C. Haliburton, *Rule and Misrule of the English in America*, bk. 3, ch. 1.

NEW FOREST.—To create a new royal hunting ground in his English dominion, William the Conqueror ruthlessly demolished villages, manors, chapels, and parish churches throughout thirty miles of country, along the coast side of Hampshire, from the Avon on the west to Southampton Water on the east, and called this wilderness of his making The New Forest. His son William Rufus was killed in it—which people thought to be a judgment. The New Forest still exists and embraces no less than 66,000 acres, extending over a district twenty miles by fifteen in area, of woodland, heath, bog and rough pasture.—J. C. Brown, *Forests of Eng.*, pt. 1, ch. 2, D.

land was practically demonstrated by the Spanish pilot Torres. But that discovery, carefully concealed as a state secret, buried in the archives of Manila, was finally forgotten by the Spanish themselves, and, after more than a century and a half, was newly made by English navigators. The expedition of Captain Cook opened an era of modern exploration on the New Guinea coasts, in which English, Dutch and French took part. The Dutch were the first to attempt an occupation of any part of the island [see MOLUCCAS], and in 1828 their government officially proclaimed possession of the western part of the island as far east as to long. 141° E. of Greenwich.—É. Reclus, *Nouvelle Géographie Universelle*, v. 14, pp. 617-20.—Until recent years no other attempts at the occupation of the island were made; but, after Fiji had been ceded to the British crown, in 1874, there began to be an agitation in Australia of proposals for securing control of eastern New Guinea. "It appeared that the claims of the Dutch, who had undoubtedly been intimately connected with the island since the beginning of the 17th century, were confined to a somewhat uncertain portion of New Guinea towards the west, the eastern part being admittedly a sort of No-man's land. Its shores had been continually visited for survey purposes during the present century by British ships, but no assertion of sovereignty over the numerous aboriginal tribes had

been made by the British Government. On the occasion of the organization of Fiji [1874], strong representations as to the desirability of taking a similar course with regard to eastern New Guinea were made to the Secretary of State (Lord Carnarvon); but the Minister, after consulting the various Australasian governments, and finding them by no means unanimous, refused to take the step unless the colonies desiring it would undertake to contribute towards the expense likely to be incurred. The colonies were not prepared to assume this responsibility. . . . Thus the matter rested, until, at the close of the year 1877, the reported discovery of gold in New Guinea again brought the question prominently forward. The news immediately attracted numbers of Australian gold-diggers, and, following in their wake, crowds of less reputable characters, who not only attempted to settle, or rather to lodge, in New Guinea itself, but took irregular possession of more than one of the numerous islands lying between Australia and New Guinea in Torres Strait, within the coast line of Queensland. Here they caused considerable trouble; and the Queensland Government, after acting as police authority in the islands in question for some little time without legal warrant, endeavoured to make its position constitutional with regard to them. In this it was successful. The British Admiralty, on the report of Commander Heath, certified that there was no known claim to the islands in question by any foreign power, and that there appeared no serious objection to the alteration of the Queensland coast boundaries for the purpose of including them. . . . Also at the request of the Queensland Government, the Admiralty stationed a war-ship at Port Moresby in New Guinea. But the Imperial Government, though pressed by representative bodies of various kinds connected with the colonies, still firmly declined to extend the principle of absorption by annexing any part of New Guinea itself to the Empire. The pressure, however, became very great. Companies were formed in Australia for the development of New Guinea. The Queensland Government's agent at Port Moresby began to assume more and more the character of an administrator of the country near the Port. . . . In February of the year 1883 the matter assumed a new phase by the definite offer of the Queensland Government . . . to bear the expense of the administration of New Guinea, if the Imperial authorities would sanction its annexation. The reasons urged by Queensland were, the increasing traffic through Torres Strait, the rapid development of coast industries, such as beche-de-mer and pearl fishing, the danger of the escape of convicts from New Caledonia, and the inadequacy of the High Commissionership. The proposal of Queensland was being discussed by the Colonial Office in somewhat leisurely fashion, when the news reached Australia that a German association had been formed for the settlement of New Guinea. . . . Lord Granville (Foreign Secretary) declined to believe in the existence of the plan, at least so far as the German Government was concerned. The colonists took a different view; and, on the 4th April, 1883, the Queensland Government formally took possession of New Guinea in the name of Her Majesty. . . . Still . . . [the Imperial Government] declined to accede to the wishes of the colonists. . . . But the colonists did not intend to give way" and ultimately

they carried their point. "In April 1886 Sir Edward Malet and Count Herbert Bismarck signed at Berlin a declaration which marks out the limits of mutual acquisition in the Western Pacific. The German possession of Kaiser Wilhelm's Land, on the north-east coast of New Guinea, is definitely recognized; and an imaginary line, starting from its south-eastern corner, travels due east to the Solomon Islands, which it bisects, then north-east to the Marshall group, and finally due north to an indefinite point in the ocean. All to the west and north of this line is secured from British influence; Germany may not acquire any possession or protectorate to the south or east. Samoa, Tonga, and one or two other places, already provided for by other treaties, are excluded from the Declaration. The way being thus prepared, and the Queensland Government definitely undertaking to contribute for 15 years an annual sum not exceeding £15,000 towards the expenses of the new possession, British New Guinea was, in June 1888, in pursuance of a new Act of Parliament passed in 1887, definitely created a possession of the British Crown. . . . Shortly before this date, the New Hebrides question had been temporarily settled by the mutual withdrawal, on the part of both England and France, of all territorial claims."—E. A. D. 1623-1631.—Gorges' and Mason's grant and the division of it.—First colonies planted.—The naming of the province. See NEW ENGLAND: A. D. 1621-1631.

A. D. 1641-1679.—The claims of Massachusetts asserted and defeated.—According to its terms, the Massachusetts patent embraced a territory extending northward three miles beyond the head-waters of the Merrimack, and covered, therefore, the greater part of Mason's New Hampshire grant, as well as that of Gorges in Maine. In 1641, when this fact had been ascertained, the General Court of Massachusetts "passed an order (with the consent of the settlers at Dover and Strawberry-bank, on the Piscataqua), 'That from thenceforth, the said people inhabiting there are and shall be accepted and reputed under the Government of the Massachusetts,' etc. Mason had died, and confusion ensued, so that the settlers were mostly glad of the transfer. A long controversy ensued between Mason's heirs and Massachusetts as to the right of jurisdiction. The history of New Hampshire and Maine at this period was much the same. In 1660, at the time of the Restoration, the heirs of Mason applied to the Attorney-General in England, who decided that they had a good title to New Hampshire. The Commissioners who came over in 1664 attempted to re-establish them; but as the settlers favored Massachusetts, she resumed her government when they left. Mason's heirs renewed their claim in 1675, and in 1679 it was solemnly decided against the claim of the Massachusetts Colony, although their grant technically included all lands extending to three miles north of the waters of the Merrimack river. John Cutt was the first President in New Hampshire, and thenceforward, to the American Revolution, New Hampshire was treated as a

Royal province, the Governors and Lieutenant-Governors being appointed by the King, and the laws made by the people being subject to his revision."—C. W. Elliott, *The New England Hist.*, v. 1, ch. 26.

A. D. 1775-1776.—The end of royal government.—Adoption of a constitution.—Declaration of Independence.—The New Hampshire Assembly, called by Governor Wentworth, came together June 12, 1775, in the midst of the excitements produced by news of Lexington and Ticonderoga. Meantime, a convention of the people had been called and was sitting at Exeter. Acting on a demand from the latter, the assembly proceeded first to expel from its body three members whom the governor had called by the king's writ from three new townships, and who were notorious royalists. "One of the expelled members, having censured this proceeding, was assaulted by the populace, and fled for shelter to

the governor's house. The people demanded him, and, being refused, they pointed a gun at the governor's door; whereupon the offender was surrendered and carried to Exeter. The governor retired to the fort, and his house was pillaged. He afterwards went on board the Scarborough and sailed for Boston. He had adjourned the assembly to the 28th of September. But they met no more. In September, he issued a proclamation from the Isles of Shoals, adjourning them to April next. This was the closing act of his administration. It was the last receding step of royalty. It had subsisted in the province 95 years. The government of New Hampshire was henceforth to be a government of the people. . . . The convention which had assembled at Exeter was elected but for six months. Previous to their dissolution in November, they made provisions, pursuant to the recommendations of congress, for calling a new convention, which should be a more full representation of the people. They sent copies of these provisions to the several towns, and dissolved. The elections were forthwith held. The new convention promptly assembled, and drew up a temporary form of government. Having assumed the name of 'House of Representatives,' they adopted a constitution [January, 1776], and proceeded to choose twelve persons to constitute a distinct and a co-ordinate branch of the legislature, by the name of a Council." The constitution provided for no executive. "The two houses assumed to themselves the executive duty during the session, and they appointed a committee of safety to sit in the recess, varying in number from six to sixteen, vested with executive powers. The president of the council was president of the executive committee. . . . On the 11th of June, 1776, a committee was chosen by the assembly, and another by the council of New Hampshire, 'to make a draught of a declaration of the independence of the united colonies.' On the 15th, the committees of both houses reported a 'Declaration of Independence,' which was adopted unanimously, and a copy sent forthwith to their delegates in congress."—G. Barstow, *Hist. of New Hampshire*, ch. 9.

A. D. 1640-1655.—The attempted colonization from New Haven, on the Delaware.—The London merchants who formed the leading colonists of New Haven, and who were the wealthiest among the pioneer settlers of New England, had schemes of commerce in their minds, as well as desires for religious freedom, when they founded their little republic at Quinnipiac. They began with no delay to establish a trade with Barbadoes and Virginia, as well as along their own coasts; and they were promptly on the watch for advantageous openings at which to plant a strong trading-post or two among the Indians. In the winter of 1638-39, one George Lambertson of New Haven, while trafficking Virginia-wards, discovered the lively fur trade already made active on Delaware Bay by the Dutch and Swedes [see Delaware: A. D. 1638-1640], and took a hand in it. His enterprising townsmen, when they heard his report, resolved to put themselves at once on some kind of firm footing in the country where this profitable trade could be reached. They formed a "Delaware Company," in which the Governor, the minister, and all the chiefs of the colony were joined, and late in the year 1640 they sent a vessel into Delaware Bay, commanded by Capt. Turner, who was one of their number. Capt. Turner "was instructed by the Delaware Company to view and purchase lands at the Delaware Bay, and not to meddle with aught that rightfully belonged to the Swedes or Dutch."

... But New Haven's captain paid little heed to boundaries. He bought of the Indians nearly the whole southwestern coast of New Jersey, and also a tract of land at Passayunk, on the present site of Philadelphia, and opposite the Dutch fort Nassau. . . . On the 30th of August, 1641, there was a Town-Meeting at New Haven, which voted to itself authority over the region of the Delaware Bay. The acts of the Delaware Company were approved, and 'Those to whom the affairs of the towne is committed' were ordered to 'Dispose of all the affayres of Delaware Bay.' The first instalment of settlers had previously gone to the Bay. Trumbull says that

NEW JERSEY.

nearly fifty families removed. As they went by New Amsterdam, Governor Kieft issued an unavailing protest, which was met, however, by fair words. The larger portion of the party settled in a plantation on Varklin's Kill (Ferkenskill, Hog Creek?), near what is now Salem, New Jersey. A fortified trading-house was built or occupied at Passayunk. This was the era of Sir Edmund Plowden's shadowy Palatinate of New Albion, and, if there is any truth in the curious 'Description,' there would seem to be some connection between this fort of the New Haven settlers and Plowden's alleged colony." The Dutch and the Swedes, notwithstanding their mutual jealousies, made common cause against these New England intruders, and succeeded in breaking up their settlements. The exact occurrences are obscurely known, but it is certain that the attempted colonization was a failure, and that, "slowly, through the winter and spring of 1643, the major part of [the settlers] . . . straggled home to New Haven. . . . The poverty and distress were not confined to the twoscore households who had risked their persons in the enterprise. The ill-starred effort had impoverished the highest personages in the town, and crippled New Haven's best financial strength." Yet the scheme of settlement on the Delaware was not abandoned. While claims against the Dutch for damages and for redress of wrongs were vigorously pressed, the town still looked upon the purchased territory as its own, and was resolute in the intention to occupy it. In 1651 a new expedition of fifty persons set sail for the Delaware, but was stopped at Manhattan by Peter Stuyvesant, and sent back, vainly raging at the insolence of the Dutch. All New England shared the wrath of New Haven, but confederated New England was not willing to move in the matter unless New Haven would pay the consequent costs. New Haven seemed rather more than half disposed to take up arms against New Netherland on her own responsibility; but her small quarrel was soon merged in the greater war which broke out between Holland and England. When this occurred, "concerted action on the part of the New Englanders would have given New Holland to the Allies, and extended New Haven's limits to the Delaware, without any one to gainsay or resist. After the Commissioners [of the United Colonies] declared for war, Massachusetts refused to obey, adopted the rôle of a secessionist, and checked the whole proceeding. New Haven, with whom the proposed war was almost a matter of life and death, was justified in adverting to the conduct of Massachusetts as 'A provoaking sinn against God, and of a scandalous nature before men.' The mutinous schemes of Roger Ludlow and of some New Haven malcontents complicated the problem still more both for Connecticut and New Haven. Finally, just as an army of 800 men was ready [1654] to march upon New Amsterdam, tidings came of a European peace, and New Haven's last chance was gone. But the town did not lose hope." Plans for a new colony were slowly matured through 1654 and 1655, but "the enterprise was completely thwarted by a series of untoward events," the most decisive of which was the conquest of New Sweden by Stuyvesant in October, 1655. "But the dream of Delaware was not forgotten."—C. H. Levermore, *The Republic of New Haven*, ch. 3, sect. 5.

A. D. 1664-1667.—The English occupation and proprietary grant to Berkeley and Carteret.—The naming of the province.—The Newark immigration from New Haven.—“Before the Duke of York was actually in possession of his easily acquired territory [of New Netherlands, or New York—see NEW YORK: A. D. 1664], on the 23d and 24th of June, 1664, he executed deeds of lease and release to Lord John Berkeley, Baron of Stratton, and Sir George Carteret, of Saltrum in Devon, granting to them, their heirs and assigns, all that portion of his tract ‘lying and being to the westward of Long Island and Manhitas Island, and bounded on the east part by the main sea, and part by Hudson’s river, and hath upon the west, Delaware bay or river, and extending southward to the main ocean as far as Cape May, at the mouth of Delaware bay; and to the northward, as far as the northernmost branch of the said bay or river of Delaware, which is 41° 40’ of latitude, and crossteth over thence in a strait line to Hudson’s river, in 41° of latitude; which said tract of land is hereafter to be called by the name or names of New Cæsarea, or New Jersey.’ The name of ‘Cæsarea’ was conferred upon the tract in commemoration of the gallant defence of the Island of Jersey, in 1649, by Sir George Carteret, then its governor, against the Parliamentarians; but the people preferred the English name of New Jersey, and the other was consequently soon lost. The grant of the Duke of York from the crown conferred upon him, his heirs and assigns, among other rights appertaining thereto, that most important one of government; the power of hearing and determining appeals being reserved to the king; but, ‘relying,’ says Chalmers, ‘on the greatness of his connection, he seems to have been little solicitous to procure the royal privileges conferred on the proprietors of Maryland and Carolina,’ whose charters conferred almost unlimited authority. ‘And while as counts-palatine they exercised every act of government in their own names, because they were invested with the ample powers possessed by the pretors of the Roman provinces, he ruled his territory in the name of the king.’ In the transfer to Berkeley and Carteret, they, their heirs and assigns, were invested with all the powers conferred upon the duke. . . . Lord Berkeley and Sir George Carteret, now sole proprietors of New Jersey, on the 10th February 1664, signed a constitution, which they made public under the title of ‘The Concessions and agreement of the Lords Proprietors of New Jersey, to and with all and every of the adventurers, and all such as shall settle and plant there.’ . . . On the same day that this instrument was signed, Philip Carteret, a brother to Sir George, received a commission as governor of New Jersey. . . . The ship Philip, having on board about 30 people, some of them servants, and laden with suitable commodities, sailed from England in the summer, and arrived in safety at the place now known as Elizabethtown Point, or Elizabeth Port, in August of the same year. What circumstance led to the governor’s selection of this spot for his first settlement, is not now known, but it was, probably, the fact of its having been recently examined and approved of by others. He landed, and gave to his embryo

town the name of Elizabeth, after the lady of Sir George. . . . Governor Carteret, so soon as he became established at Elizabethtown, sent messengers to New England and elsewhere, to publish the concessions of the proprietors and to invite settlers. In consequence of this invitation and the favorable terms offered, the province soon received large additions to its population.”

—W. A. Whitehead, *East Jersey under the Proprietary Governments (N. J. Hist. Soc. Colls., v. 1), period 2.*—“In August, 1665, he [Governor Carteret] sent letters to New England offering to settlers every civil and religious privilege. Mr. Treat and some of his friends immediately visited New Jersey. They bent their steps toward the New Haven property on the Delaware Bay, and selected a site for a settlement near what is now Burlington. Returning by way of Elizabeth, they met Carteret, and were by him influenced to locate on the Passaic River. . . . Early in the spring of 1666, the remnant of the old New Haven, the New Haven of 1638, under the leadership of Robert Treat and Mathew Gilbert, sailed into the Passaic. . . . In June, 1667, the entire force of the little colony was gathered together in their new abode, to which the name ‘Newark’ was applied, in honor of Mr. Pierson’s English home. [Mr. Pierson was the minister at Branford, in the New Haven colony, and his flock migrated with him to Newark almost bodily.] The Fundamental Agreement was revised and enlarged, the most notable expansion being the following article: ‘The planters agree to submit to such magistrates as shall be annually chosen by the Friends from among themselves, and to such Laws as we had in the place whence we came.’ Sixty-four men wrote their names under this Bill of Rights, of whom 23 were from Branford, and the remaining 41 from New Haven, Milford, and Guilford. Most of them were probably heads of families, and, in all the company, but six were obliged to make their marks. . . . It seems to me that, after 1666, the New Haven of Davenport and Eaton must be looked for upon the banks, not of the Quinipiac, but of the Passaic. The men, the methods, the laws, the officers, that made New Haven Town what it was in 1640, disappeared from the Connecticut Colony, but came to full life again immediately in New Jersey. . . . Newark was not so much the product as the continuation of New Haven.”—C. H. Levermore, *The Republic of N. Haven*, ch. 4, sect. 6.

A. D. 1673-1682.—The sale to new Proprietors, mostly Quakers, and division of the province into East Jersey and West Jersey.—The free constitution of West Jersey.—In 1673 Lord Berkeley, one of the original proprietors, “sold his one-half interest in the Province for less than \$5,000. John Fenwick and Edward Byllinge, two English Quakers, were the purchasers. A dispute arose between the new proprietors about the division of their property, and William Penn, who afterward became the founder of Pennsylvania, was chosen arbitrator to settle the difficulty, and succeeded to the satisfaction of all parties interested. Fenwick sailed from London, in 1675, in the ship ‘Griffith,’ with his family and a small company of Quakers. This was the first English vessel that came to

New Jersey with immigrants. The party sailed up the Delaware bay, and, entering a creek, landed on its banks three miles and a half from the Delaware. This creek, and the settlement founded on it, Fenwick named Salem. This was the first English settlement permanently established in West Jersey."—J. R. Sypher and E. A. Apgar, *Hist. of New Jersey*, ch. 1.—In July, 1676, the province was divided, Philip Carteret taking East Jersey, and the successors of Berkeley taking West Jersey. "Thereupon, Carteret, by will, devised his plantation of New Jersey to trustees to be sold for certain purposes, by him stated, in 1681-2. . . . He had not a peaceable time. Indeed, anything like constant peace was the lot of very few of New Jersey's early Governors. Governor Andros, of New York, disputed Carteret's authority; nay, failing by peaceable means to gain his point, he sent a party of soldiers by night [1678], who dragged Carteret from his bed, carried him to New York, and there kept him close until a day was set on which he was tried before his opponent himself in the New York Courts, and three times acquitted by the jury, who were sent back with directions to convict, but firmly each time refused. The authority of Carteret was confirmed by the Duke of York, and Andros was recalled. . . . The trustees of Sir George Carteret could not make sale of East Jersey. After ineffectual attempts at private sale they offered it at public auction, and William Penn and eleven associates, most if not all Quakers, bought it for £3,400. It was too heavy a purchase, apparently, for their management. Each sold half his right to another, and so were constituted the twenty-four Proprietors. They procured a deed of confirmation from the Duke of York March 14th, 1682, and then the twenty-four Lords Proprietors by sealed instrument established a council, gave them power to appoint overseers, and displace all officers necessary to manage their property, to take care of their lands, deed them, appoint dividends, settle the rights of particular Proprietors in such dividends, grant warrants of survey, in fine, to do everything necessary for the profitable disposition of all the territory. . . . The new Proprietors were men of rank. William Penn is known to all the world. With him were James, Earl of Perth, John Drummond, Robert Barclay, famous, like Penn, as a Quaker gentleman, and a controversialist for Quaker belief; David Barclay. . . . Each Proprietor had a twenty-fourth interest in the property, inheritable, divisible, and assignable, as if it were a farm instead of a province. And by these means the estate has come down to those who now own the property. . . . In New Jersey. . . . our Legislature has nothing at all to do with our waste or unappropriated land. It all belongs to the Proprietors, to those, namely, who own what are known as Proprietary rights, or rights of Proprietorship, and is subject to the disposition of the Board of Proprietors. . . . What is left in their control is now [1884] of comparatively slight value."—C. Parker, *Address, Bi-Centennial Celebration of the Board of Am. Proprietors of E. New Jersey*.—The division line between East Jersey and West Jersey, as established by the agreement between the Proprietors, began at Little Egg Harbor and extended northwestward to a point on the Delaware river in 41 degrees of north latitude. "After this line had been estab-

lished, John Fenwick's interest in West Jersey was conveyed to John Eldridge and Edmund Warner in fee, and they were admitted into the number of proprietors. In order to establish a government for the Province of West Jersey, provisional authority was given to Richard Hartshorne and Richard Guy, residents of East Jersey, and to James Wasse, who was sent especially from England to act on behalf of the proprietors. These persons were commissioned on the 18th of August, 1676, by Byllinge and his trustees, in conjunction with Eldridge and Warner, and full power was given them to conduct the affairs of the government in accordance with instructions from the proprietors. Fenwick, who had founded a settlement at Salem, refused to recognize the transfer of his portion of the Province to Eldridge and Warner, and declared himself to be independent of this new government. It therefore became the first duty of the commissioners to settle this difficulty. All efforts, however, for that purpose failed. The original plan of the government was devised by William Penn and his immediate associates. It was afterward approved by all the proprietors interested in the Province, and was first published on the 3d of March, 1676, as 'The Concessions and Agreements of the proprietors, freeholders and inhabitants of the Province of West Jersey in America.' This constitution declared that no man or number of men on earth had power or authority to rule over men's consciences in religious matters; and that no person or persons within the Province should be in any wise called in question or punished, in person, estate or privilege, on account of opinion, judgment, faith or worship toward God in matters of religion. . . . That all the inhabitants of the Province should have the right to attend court and be present at all proceedings, 'to the end that justice may not be done in a corner, nor in any covert manner.' . . . The executive authority of the government was lodged in the hands of commissioners, to be appointed at first by the proprietors or a majority of them; but after the further settlement of the Province they were to be chosen by the resident proprietors and inhabitants, on the 25th of March of each year. The first election for commissioners occurred in 1680. . . . One of the most remarkable features in this instrument is the fact that no authority is retained by the proprietary body. 'We put the power in the people,' was the language of the fundamental law."—J. R. Sypher and E. A. Apgar, *Hist. of New Jersey*, ch. 3.

A. D. 1688-1738.—Extinguishment of the Proprietary political powers.—Union of the two Jerseys in one royal province.—"In New Jersey, had the proprietary power been vested in the people or reserved to one man, it might have survived, but it was divided among speculators in land, who, as a body, had gain, and not the public welfare, for their end. In April, 1688, 'the proprietors of East New Jersey had surrendered their pretended right of govern-

ment,' and the surrender had been accepted. In October of the same year, the council of the proprietaries of West New Jersey voted to the secretary-general for the dominion of New England the custody of 'all records relating to government.' Thus the whole province fell, with New York and New England, under the government of Andros. At the revolution, therefore [the English Revolution of 1688-89], the sovereignty over New Jersey had reverted to the crown; and the legal maxim, soon promulgated by the board of trade, that the domains of the proprietaries might be bought and sold, but not their executive power, weakened their attempts at the recovery of authority, and consigned the colony to a temporary anarchy. A community of husbandmen may be safe for a short season with little government. For twelve years, the province was not in a settled condition. From June, 1689, to August, 1692, East New Jersey had apparently no superintending administration, being, in time of war, destitute of military officers as well as of magistrates with royal or proprietary commissions. They were protected by their neighbors from external attacks; and there is no reason to infer that the several towns failed to exercise regulating powers within their respective limits. . . . The proprietaries, threatened with the ultimate interference of parliament in provinces 'where,' it was said, 'no regular government had ever been established,' resolved to resign their pretensions. In their negotiations with the crown, they wished to insist that there should be a triennial assembly; but King William, though he had against his inclination approved triennial parliaments for England, would never consent to them in the plantations. In 1702, the first year of Queen Anne, the surrender took place before the privy council. The domain, ceasing to be connected with proprietary powers, was, under the rules of private right, confirmed to its possessors, and the decision has never been disturbed. The surrender of 'the pretended' rights to government being completed, the two Jerseys were united in one province; and the government was conferred on Edward Hyde, Lord Cornbury, who, like Queen Anne, was the grandchild of Clarendon. Retaining its separate legislature, the province had for the next thirty-six years the same governors as New York. It never again obtained a charter: the royal commission of April 1702, and the royal instructions to Lord Cornbury, constituted the form of its administration. To the governor appointed by the crown belonged the power of legislation, with consent of the royal council and the representatives of the people. . . . The freemen of the colony were soon conscious of the diminution of their liberties."—G. Bancroft, *Hist. of the U. S. (author's last rev.)*, pt. 3, ch. 2 (v. 2).

A. D. 1774-1776.—End of royal government.—Adoption of a State Constitution.—In the person of William Franklin, unworthy son of Benjamin Franklin, New Jersey was afflicted, at the outbreak of the Revolutionary struggle, with an arbitrary and obstinately royalist governor. Finding the assembly of the colony refractory and independent, he refused to convene it in 1774, when the people desired to send delegates to the Continental Congress. Thereupon a convention was held at New Brunswick, and this body not only commissioned delegates to the general Congress, but appointed a "general committee of correspondence" for the Province. The committee, in May of the following year, called together, at Trenton, a second Provincial Convention, which took to itself the title of the "Provincial Congress of New Jersey," and assumed the full authority of all the branches of the government, providing for the defense of the Province and taking measures to carry out the plans of the Continental Congress. "Governor Franklin convened the Legislature on the 16th of November, 1775. No important business was transacted, and on the 6th of December the Assembly was prorogued by the governor to meet on the 3d of January, 1776, but it never reassembled, and this was the end of Provincial legislation in New Jersey under royal authority. . . . Though the Provincial Congress of New Jersey had to a great extent assumed the control of public affairs in the Province, it had not renounced the royal authority. . . . On the 24th of June, a committee was appointed to draft a constitution. . . . New Jersey was, however, not yet disposed to abandon all hopes of reconciliation with the Crown, and therefore provided in the last article of this constitution that the instrument should become void whenever the king should grant a full redress of grievances, and agree to administer the government of New Jersey in accordance with the constitution of England and the rights of British subjects. But, on the 18th of July, 1776, the Provincial Congress assumed the title of 'The Convention of the State of New Jersey,' declared the State to be independent of royal authority, and directed that all official papers, acts of Assembly and other public documents should be made in the name and by the authority of the State." Before this occurred, however, Governor Franklin had been placed under arrest, by order of Congress, and sent to Connecticut, where he was released on parole. He sailed immediately for England. "When the State government was organized under the new constitution, the Legislature enacted laws for the arrest and punishment of all persons who opposed its authority."—J. R. Sypher and E. A. A. D. 1846.—The American conquest and occupation by Kearney's expedition.—“While the heaviest fighting [of the Mexican War] was going on in Old Mexico [see MEXICO: A. D. 1846-1847], the Government [of the United States] easily took possession of New Mexico and California, by means of expeditions organized on the remote frontiers. New Mexico was wanted for the emigration to the Pacific. If we were to have California we must also have the right of way to it. In the hands of the Spaniards, New Mexico barred access to the Pacific so completely that the oldest travelled route was scarcely known to Americans at all, and but little used by the Spaniards themselves. If now we consult a map of the United States it is seen that the thirty-fourth parallel crosses the Mississippi at the mouth of the Arkansas, cuts New Mexico in the middle, and reaches the Pacific near Los Angeles. It was long the belief of statesmen that the great tide of emigration must set along this line, because it had the most temperate climate, was shorter, and would be found freer from hardship than the route by way of the South Pass. This view had set on foot the exploration of the Arkansas and Red Rivers. But if we except the little that Pike and Long had gathered, almost nothing was known about it. Yet the prevailing belief gave New Mexico, as related to California, an exceptional importance. These considerations weighed for more than acquisition of territory, though the notion that New Mexico contained very rich silver-mines undoubtedly had force in determining its conquest. . . . With this object General Kearney marched from Fort Leavenworth in June, 1846, for Santa Fé, at the head of a force of which a battalion of Mormons formed part. After subduing New Mexico, Kearney was to go on to California, and with the help of naval forces already sent there, for the purpose, conquer that country also. . . .

General Kearney marched by the Upper Arkansas, to Bent's Fort, and from Bent's Fort over the old trail through El Moro and Las Vegas, San Miguel and Old Pecos, without meeting the opposition he expected, or at any time seeing any considerable body of the enemy. On the 18th of August, as the sun was setting, the stars and stripes were unfurled over the palace of Santa Fé, and New Mexico was declared annexed to the United States. Either the home government thought New Mexico quite safe from attack, or, having decided to reserve all its strength for the main conflict, had left this province to its fate. After organizing a civil government, and appointing Charles Bent of Bent's Fort, governor, General Kearney broke up his camp at Santa Fé, Sept. 25. His force was now divided. One part, under Colonel Doniphan, was ordered to join General Wool in Chihuahua. A second detachment was left to garrison Santa Fé, while Kearney went on to California with the rest of his troops. The people everywhere seemed disposed to submit quietly, and as most of the pueblos soon proffered their allegiance to the United States Government, little fear of an outbreak was felt. Before leaving the valley, a courier was met bearing the news that California also had submitted to us without striking a blow. This information decided General Kearney to send back most of his remaining force, while with a few soldiers only he continued his march through what is now Arizona for the Pacific.”—S. A. Drake, *The Making of the Great West*, pp. 251-255.

A. D. 1875-1894.—Prospective admission to the Union.—A bill to admit New Mexico to the Union as a state was passed by both houses of Congress in 1875, but failed in consequence of an amendment made in the Senate too late for action upon it in the House of Representatives. Attempts to convert the scantily populated territory into a state were then checked for several years. At this writing (July 1894) a bill for organizing and admitting the state of New Mexico has again passed the House of Representatives, and is likely to have a favorable vote in the Senate.

A. D. 1891.—The lynching of Italian assassins.—In the spring of 1891, the chief of police at New Orleans, David C. Hennessy, unearthed a murderous secret society, known as the Mafia, which seemed to be widely spread among Italians in that city and elsewhere. In the midst of his investigations he was waylaid and shot. Nine Italians, arrested for complicity in the crime, escaped conviction when brought to trial, and a belief prevailed that the jury had been either terrorized or bribed. A mass meeting of indignant citizens was accordingly held, and the meeting resolved itself into a mob. The prison which held the alleged assassins was broken into and they were slain. The Italian government demanded redress and punishment for the deed; but the federal authorities at Washington had no power to deal with the affair, and a troublesome imbroglio arose. It was ended finally by a payment of \$25,000 to the families of the men killed by the mob.

A. D. 1821-1831.—Governors Brisbane and Darling.—First stage of a constitutional self-government.—"The end of Governor Macquarie's term of office marks the conclusion of the colony's infancy. . . . The next Governorship, that of Sir Thomas Brisbane, marks a definite stage in the history of New South Wales. The discovery of the Bathurst Plains [see AUSTRALIA: A. D. 1800-1840] had put an end to all doubts of the ultimate ability of the colony to sustain an increasing population; and now, for the first time, the tide of free immigration began to flow. . . . The great achievement of Governor Brisbane's administration was the introduction of institutions which ultimately served as the basis of self-government in Australia. . . . We are now entering upon a period in which institutions will gradually take the place of men. This period begins definitely in the year 1823, with

NEW SOUTH WALES.

the passing of the first Constitutional Statute which operated in Australia. . . . By it the former military administration of justice, by a Judge-Advocate and military assessors, was superseded by a Supreme Court on an English model, with a Chief Justice, and the right to a trial by jury in civil cases, if both the parties agreed upon it. But in criminal cases the jury was still to consist of military officers, seven in number, although the prisoner was to be entitled to challenge them on any grounds for which an ordinary juror could be objected to in England. His Majesty in Council was, however, authorized to extend the jury system in any way deemed desirable; and, as a matter of fact, it was not very long before the jury system was introduced into criminal trials in Australia. Moreover, convicts were no longer to be excluded from giving evidence in Courts of Justice. . . . The political innovations made by the statute were also important. They provided for the appointment of a Council with legislative and financial powers, albeit under certain very substantial limitations. . . . This Council at first consisted entirely of Government officials, and was of course subject to no process of popular election. But, as Lord Bathurst explained in his letter which covered the warrant of appointment, it was intended by the Home Government that the new Council should at least to some degree represent the views of non-official colonists; and this pledge was redeemed in the year 1825 by the nomination of three independent members. . . . The other great political object of the statute was the separation of Tasmania (then known as Van Diemen's Land) from the mother colony. . . . The Home Government, at the time of the passing of the Act, apparently hesitated between complete and partial separation, and took powers for both. Lord Bathurst ultimately decided in favour of partial separation only; and Van Diemen's Land had to wait many years before becoming completely independent of the Government at Sydney. . . . The mother colony of Australia now started upon a career of progress and development which, in spite of stormy interludes, it maintained until the crisis of 1843. The marks of freedom and independence manifested themselves one by one. Freedom of the press was formally proclaimed in 1824, and although (as might have been expected) the liberty was at first abused, and caused much trouble during the governorship of Sir Ralph Darling (1825-1831), yet, under the more judicious rule of Sir Richard Bourke (1831-1837), the difficulties were removed. . . . In the year 1827 the colony was rich enough to support its own civil government; . . . and, a few years later, the Government of the colony began even to vote funds to assist the immigration of desirable colonists. . . . By a statute of the Imperial Parliament passed in the year 1828, the maximum number of the Council was raised to fifteen, and its legislative powers considerably increased. This important change virtually placed the official members of the Council in a minority in questions upon which the Government and the settlers as a whole were divided in opinion. . . . In the administration of justice still further steps towards a free model were taken; and the somewhat sweeping clause, which introduced the whole of existing English law en bloc, though it subsequently gave rise to some technical diffi-

culty, was obviously calculated to afford the ordinary colonist substantial protection against the arbitrary action of Government."—E. Jenks, *The History of the Australasian Colonies*, ch. 2-3.

A. D. 1831-1855.—Convict transportation abolished.—Immigration stimulated.—Self-government secured.—Governor Darling was succeeded by "Major-General Sir Richard Bourke, K. C. B., [who] arrived in Sydney on the 2nd of December, 1831. . . . The six years during which Bourke administered the affairs of the colony were not only free from class warfare, but were distinguished by the rapid growth of industry and commerce, and the steady development of national life under new forms. In fact, the history of the colony as a free State, so to speak, may be said to date from Bourke's time. . . . Trial by jury in the Superior Courts—that is, by civilian instead of by military jurors—was granted in an optional form in 1833; and although representative government was still withheld by the Home authorities, the administration of public affairs was conducted by Bourke on constitutional principles, with very little resort to the arbitrary power which had made his predecessor's rule distasteful to the whole community. . . . The history of the colony during the Administration of Sir George Gipps, a Captain in the Royal Engineers, who arrived in February, 1838, assumes proportions altogether unknown to it under the rule of his predecessors. It is no longer occupied with the melancholy records of the convict class, or the bitter feuds between the Emancipists and the Exclusives. The state of society had changed; free immigration had begun to flow in; capital was introduced by settlers from abroad and invested in sheep and cattle stations; the system of assigned servants ceased in 1838, and transportation itself, which had been yearly growing more unpopular, was abolished by an Order in Council two years later, although it was not finally extinguished until 1851. The most remarkable event of this period was the establishment of a new Constitution, under an Act passed by the Imperial Parliament in 1842. Representative institutions were at length conceded to the colony, although responsible government was still withheld. The new Legislative Council was composed of 36 members, of whom 24 were elected and 12 appointed by the Crown. . . . From 1840 to 1846, the colony was plunged in a state of depression which brought the shadow of ruin to every man's door. This was to some extent the result of a re-action from the inflated state of prosperity which had existed a few years before, when prices of land and stock rose to a fictitious value, and speculation in land absorbed all the floating capital in the country. Among the immediate causes of depression were the cessation of Imperial expenditure on transportation, and the withdrawal of Government deposits from the banks; the consequent pressure brought to bear by those institutions on their customers; the substitution of free labour for that of the assigned servants, necessitating cash payment of wages; the locking up of capital in large purchases of land, which up to that time had been sold at five and subsequently twelve shillings an acre; and indulgence in excessive speculation, by which the ordinary industries of the country were deprived of capital. The result was that every branch of trade and industry fell into a state of utter collapse. . . . Politics

at this time gave rise to a bitter struggle. Certain Crown Lands Regulations which Sir George Gipps had framed and issued in 1844, provoked determined opposition on the part of the squatters. . . . His proposal to tax the holders of Crown lands was denounced as tyranny. . . . The ultimate result was that the Council refused to renew the Land Act framed by Gipps, which had been passed for one year only, and the Governor's land policy was at an end. Sir George Gipps closed his career in New South Wales in July, 1846, and died in England the following February. . . . Sir Charles Fitzroy arrived in Sydney at a time when the colony had entered on an era of prosperity hitherto unknown in its history. . . . In the first speech he addressed to the Legislative Council on its meeting in September, 1846, a month after his arrival, he congratulated its members on the general prosperity of the country—a prosperity the more remarkable, inasmuch as the colony was 'only just emerging from those difficulties which were experienced under that monetary depression which affected all classes of the community.' Among the many striking evidences of the new life which had been infused into the colony at this time, mainly as a result of free immigration and the rapid extension of settlement in the interior, the most conspicuous were the movements set on foot for the construction of railways and the establishment of steam communication with England. The gradual increase in the tide of immigration had greatly contributed to promote the prosperity of the people. . . . Flocks and herds were driven further and further inland as each new discovery made the resources of the interior known; but stock-owners and settlers were met with the ever-increasing difficulty of finding a sufficient supply of labour. Convict labour was nominally cheap, but really dear at any price. . . . It gradually became recognized as a principle of State policy, mainly owing to Wakefield's teaching, that the revenue arising from the land should be appropriated to the purpose of promoting immigration. Under that system money was remitted by the Colonial Government every year to be expended by a Board of Emigration Commissioners appointed in London, who selected and despatched the best emigrants they could get. But American competition was keenly felt in the labour market, and the Government had to tempt people to emigrate to Australia by paying half the passage money and offering small loans to mechanics, who could be induced to leave England on no other terms. . . . The conduct of public affairs by the Council, in which [William Charles] Wentworth was the principal figure, had been so distinguished for statesmanlike ability that the capacity of the colonists for self-government could no longer be denied. But a still more potent influence had been at work. The great gold discoveries, which took place in 1849, had, in Wentworth's phrase, precipitated the colony into a nation, and the demand for free institutions came upon the Home Government with a degree of force it was impossible to resist. When, therefore, the popular advocate of self-government obtained a committee in 1852 to prepare a new Constitution for the colony, in pursuance of the powers conferred on the Council by the Imperial Parliament, it was felt that the time had at last arrived when the life-long struggle of the patriot would be crowned with suc-

cess. The second reading of the Bill was moved by him in the session of the following year, and was carried by a majority of 34 to 8. It was strongly opposed by a considerable section of the public on the ground that the Members of the Upper House should be elected, instead of being nominated by the Crown. But the nominee principle was considered essential by the framers of the Bill, for the purpose of reproducing the Constitution of the British Parliament as closely as possible; and in deference to those views, the Bill was passed as it stood. . . . The Bill [subsequently enacted by the Imperial Parliament] . . . was received in the colony in October, 1855. The old Legislative Council was finally dissolved on the 19th of December following, and the new Constitution was formally inaugurated by the Governor-General, Sir William Denison, who had succeeded Sir Charles Fitzroy in the beginning of the year. The establishment of responsible government brought about so great a change in the political system of the colony that from that date the current of its history may be said to run in a totally different channel. Other actors come upon the scene. The martial figure of the Governor disappears, his place being occupied by men henceforth known as the responsible Ministers of the Crown."—*Historical Review of New South Wales* by G. B. Barton, A. Sutherland, and F. J. Broomfield, in *Australasia Illustrated*, v. 1, pp. 84-93.

A. D. 1850.—Separation of the Colony of Victoria. See AUSTRALIA: A. D. 1839-1855.

A. D. 1855-1893.—The Colonial Constitution.—Liberalized Land Policy.—Public Education.—"The principles of the Constitution, as originally laid down, have never been altered, but there have been some changes in minor details. In New South Wales, as in the other Australian colonies, the democratic element was increasing, and before long the Electoral Act was amended and the franchise reduced to practically manhood suffrage. At the same time, the old system of voting was abolished, and all elections have since been conducted by means of the ballot-box. Various other amendments of the Electoral Act have taken place from time to time, and the few restrictions of political privilege which remained have been removed. The Legislative Council now [1893] contains 67 members—though there is no fixed limit of numbers—and there are 141 members of the Assembly. The tenure of a seat in the Council is for life, and the only qualification required of members is that they shall be 21 years of age, and naturalized or natural born subjects of the Queen, while the qualification of the Lower House is practically the same. . . . The duration of the Assembly is limited to three years, and the only condition at present necessary to obtain elective rights is six months' residence before the rolls are compiled. Within the first five years of responsible government, under the guidance of Sir John Robertson elaborate regulations were framed for the alienation and occupation of Crown lands. The circumstances of the colony had been greatly altered by the discovery of gold [see AUSTRALIA: A. D. 1839-1855; and MONEY AND BANKING: A. D. 1848-1893], and the question of land settlement had to be dealt with in an entirely new spirit to meet the wants of a class of a different type to that contemplated by the framers of former enactments.

. . . The Government were beaten by a large majority on the question of 'free selection before survey.' The Governor was urged to dissolve Parliament, but this he declined to do, and before long public sentiment underwent a complete change; the cry of 'free selection before survey' was made the watchword of the democratic party; and the measure on its re-introduction consequently became law. The Act of 1861 was intended to facilitate the settlement of an industrial agricultural population, side by side with the pastoral tenants, by means of free selection in limited areas. . . . The new Parliament did not confine its liberalism to the administration of the Crown lands. Before it had been many years in existence an Act was passed abolishing all grants from the State Treasury in aid of religious denominations, while a further levelling measure found its place on the statute book in an Act providing for the abolition of the law of primogeniture. . . . The whole country was terrorised for many years following 1860 by the exploits of bushrangers, and for a time the executive appeared to be incapable of dealing with these offenders. . . . Eventually the law prevailed, and bushranging and its accompanying evils were completely stamped out. . . . The Public Schools Act of 1866 . . . provided for two distinct classes of schools, though all schools receiving aid from the State were placed by it nominally under a Council of Education. The public schools were entirely under the control of this board, but the denominational schools were still managed to some extent by the various religious bodies to which they had hitherto belonged. . . . In 1880, State aid to denominational education was finally abolished. By the new Act, which is still in force the entire educational system of the colony was remodelled; the Council of Education was dissolved, and a Minister of Public Instruction created in its place. Public schools to afford primary instruction to all children without sectarian or class distinction were established, as well as superior public schools, in which a more advanced course might be followed. . . . Pastoral industries are still the mainstay of the country."—G. Tregarthen, *The Story of Australasia*, ch. 11-12.

A. D. 1891.—Rise of the Labor Party.—"The uprise of the Parliamentary Labour Party of New South Wales was a dramatic anti-climax to the defeat of Australian Trades Unionism in the disastrous maritime strike of 1890. . . . The workers were seemingly crushed in . . . [a] battle with the shipping interests in 1890. In 1891 the same bodies that had gone down in the Sedan of the year before emerged an organized Parliamentary force, holding the balance of power in the legislature of New South Wales. . . . The strike had injured many innocent interests, as it always did and always will. 'Could not a more enlightened remedy be found?' seemed to be one of the rational conclusions arrived at, and the Trades Unions co-operated with the victorious capitalists and their govern-

ment allies, through the means of a commission, in an effort to find a way of settling trade disputes by the peaceful methods of arbitration. These efforts succeeded and left the Labour organizations free to devote their energies to the carrying out of a programme of Parliamentary action. Labour made up its mind to send men from its own ranks to the Legislature. It resolved to be represented by its own and not by another class. There were no insuperable difficulties in the way, as in Great Britain and Ireland. Members were paid. The franchise was available, though not to the extent it soon afterwards became. Constituencies were small, and the mining, shearing, and maritime Labour elements were so comparatively large in the population of the colony that it only needed steady exertions in the constituencies to secure the return of a fair number of Labour members. Issues upon which differences existed in the Labour ranks were wisely subordinated to the one task of electing direct Labour men, and free traders, protectionists, and single taxers united in securing that object. They succeeded to an extent which astounded the whole public of Australia. In fact, a peaceful revolution had been created in the Parliamentary politics of New South Wales. The success at first seemed to be too great, and became, on that account, intoxicating and somewhat embarrassing afterwards. They won no less than 18 seats in Sydney alone, and emerged from the general election of June, 1891, 35 strong, while 5 more members were elected who called themselves Independents; with a government having only 49 supporters, and an opposition numbering 50."—M. Davitt, *Life and Progress in Australasia*, ch. 41.

A. D. 1891.—An ex-Governor's View of the Colony and its attitude toward the "Mother Country."—"So far, with one solitary exception, I have heard no public utterance in England that showed anything like an adequate apprehension of the point of view of these Colonies with regard to their own and imperial matters. That solitary exception is Lord Carrington. . . . Not long after his return from his five years' governorship of New South Wales, he read before a general meeting of the Imperial Institute a thoughtful and interesting summary of his impressions of Australia—'Australia as he saw it.' 'Five years ago,' he said, 'I landed in Australia with my wife and my children, hardly knowing a single soul by sight in the whole country; my great desire was to be free from prejudice and open to impressions.' Very quickly these impressions led him to see the magnitude of the differences between the social conditions of the two countries. 'A scattered population, according to European notions, in a vast country; a small proportion of that population settled upon the soil; freedom of mind and habits nurtured by more air, more sun, more space; influence centred in Sydney and in other of the larger towns, but not in the thinly-peopled country districts—all are striking features of New South Wales. The most salient feature of all was the power of growing and conscious strength.' The actual shape taken by this power did not escape him. 'Men,' he saw in this new land, 'have been so occupied with the vividness of the present, with the importance of their own individual affairs, that public opinion has not become so "crystallised," so keen and

sharp, as in the Mother Country. But within the last ten years public opinion has been advancing, like everything else, by leaps and bounds, and is rapidly becoming a very strong "juvenile" indeed, with a will of its own, and the Australian will is a question which has to be faced. . . . The idea of Nationalism—a very different thing from Separation—is strongly growing and increasing in Australia, and the course of history, as usual, will probably be closely connected with ideas. . . . Neither England nor Australia will suffer dictation. . . . The people of Australia seem to be entering upon a new era of national life. . . . They consider that the age of tutelage is over.' . . . Lord Carrington's Bristol speech, delivered last November [1891], reached a larger and more important audience than that of the 'habitués' and 'protégés' of the Imperial Institute. . . . The most important part was his criticism of the Naval Defence Bill. This Bill . . . was passed promptly through all the Australian Assemblies with the exception of Queensland, where it was defeated and only ultimately accepted under protest. . . . Lord Carrington's treatment of the subject, considering that the Bill was passed in New South Wales almost without comment, and that it was not till some time later that public opinion in that colony ripened in the matter, shows a quickness at apprehending the real drift of things which is indeed remarkable. 'We all remember that troops were suddenly withdrawn from Australia some years ago. The Colonies asked for these troops to be allowed to remain, on the condition that they were to pay for their maintenance, at any rate for a time. The Colonial Office pointed out that the principle was all wrong, and the late Lord Lytton, Tory Secretary of State for the Colonies, said: "A Colony which is once accustomed to depend on Imperial soldiers never grows up to vigorous manhood." What is wrong in the army is right in the navy; and this colonial maintenance problem is being tried in Australia at the present time. This arrangement is as follows:—Seven ships built at the cost to the English taxpayer of nearly a million sterling have arrived at Sydney. Five of them are to be maintained at the cost of the Australians for ten years. England commissions the other two in case of war. It sounds all right, but will this experiment succeed? Ships should have only one commander, i. e., the admiral, and no fleet can exist under dual control. But how can you have taxation, even voluntary taxation, without representation? . . . And, to increase the difficulties, the Colonial Office has acknowledged a claim of Admiral Fairfax to precedence over everybody except the Governor of the colony in which he happens to be. . . . This claim, which shocked colonial sentiment, was received with a shout of laughter all over Australia, and is a dead letter and impossible to be enforced.'"—F. Adams, *The Australians*, pp. 263-71.

NEW SPAIN: The name given at first to Yucatan, and afterwards to the province won by Cortés. See AMERICA: A. D. 1517-1518; and MEXICO: A. D. 1521-1524.
